Pečlivě jsem prošel dostupnou literaturu a narazil jsem na nespočet studií zaměřených na snížení sebestigmatizace u autistů, kteří pouze mají autistického příbuzného, a výše zmíněná přehledová studie zahrnuje některé z nejvýznamnějších prací na toto téma. V době psaní této knihy se mi však nedáří najít žádný výzkum věnující se snížení sebestigmatizace přímo u členů stigmatizované skupiny, tedy u autistů samotných.

12. Existuje několik studií naznačujících, že autisté patří ke spolehlivým oznamovatelům nekalých praktik – aby měly jejich kroky nějaký dopad, většinou se musí jednat o lidi, jimž nevadí, že jsou neoblibení, a jejichž smysl pro morálku neovlivní společenský tlak. 4. Podcast *Fat Outta Hell* skvěle zachycuje, jak je většina veřejných prostor tlustým lidem nepřístupná; i zdánlivé drobnosti, například to, že jsou v restauraci stoly přišroubované k podlaze, může daný prostor silnějším lidem naprostě zlepštěn. Tento článek v časopise *Nature* popisuje příklad toho, jak vyřazování tlustých lidí z lékařského výzkumu vede k všudypřítomné zdravotní nerovnosti: <https://www.nature.com/articles/ejcn201457>.

9. Pokud tedy člověk jinak „má pro dané zaměstnání potřebnou kvalifikaci“. To je poněkud subjektivní podmínka poskytující prostor pro případnou diskriminaci. Mnoho nabídek práce na pozice nevyžadující fyzickou práci (třeba administrativní asistentskou pozici) nicméně zahrnují například požadavek, že zaměstnanec musí být schopen zvednout deseti- až dvacetikilovou krabici.
