

5	Symmetrization and Additional Variables	55
5.1	Examples	55
5.2	Practice Problems	63
6	Iterations and Recurrence Relations	65
6.1	Theory and Examples	65
6.2	Practice Problems	75
7	Constructive Problems	79
7.1	Examples	79
7.2	Constructing Functions by Iterations	90
7.3	Practice Problems	100
8	D'Alembert Equation	105
8.1	D'Alembert Equation	105
8.2	Polynomial Recurrences and Continuity	108
8.3	Practice Problems	121
9	The Aczél–Gołąb–Schinzel Equation	123
9.1	Theory and Examples	123
9.2	Practice Problems	128
10	Arithmetic Functional Equations	131
10.1	Theory and Examples	131
10.2	Practice Problems	144
11	Binary and Other Bases	147
11.1	Theory and Examples	147
11.2	Practice Problems	152
12	Geometric Functional Equations	155
12.1	Fundamental Theorem of Affine Geometry	155
12.2	Examples	160
12.3	Practice Problems	163

13	Approximating by Linear Functions	167
13.1	Theory and Examples	167
13.2	Practice Problems	173
14	Extremal Element Method	175
14.1	Theory and Examples	175
14.2	Practice Problems	186
15	Fixed Points	189
15.1	Theory and Examples	189
15.2	Practice Problems	193
16	Functional Equations for Polynomials	195
16.1	Theory and Examples	195
16.2	Fermat's Theorem for Polynomials	208
16.3	Practice Problems	213
17	Functional Inequalities	217
17.1	Examples	217
17.2	Practice Problems	224
18	Miscellaneous Problems	227
18.1	Inductive Arguments	227
18.2	Basic Properties of Functions	231
18.3	Continuous Functions	236
18.4	The Odd and Even Parts of Functions	237
18.5	Constructive Problems	238
18.6	Functional Equations Using Special Groups	239
18.7	Density	239
18.8	Iterations	240
18.9	Discrete Subharmonic Functions	242
19	Hints and Solutions	245
19.1	Cauchy's Equations	245
19.2	Generalized Cauchy Equations	254

19.3 Reducing to Cauchy	261
19.4 Substitutions	279
19.5 Symmetrization and Additional Variables	296
19.6 Iterations and Recursive Relations	304
19.7 Constructive Problems	315
19.8 D'Alembert's Equation	332
19.9 The Aczel-Golab-Schinzel Equation	344
19.10 Arithmetic Functional Equations	347
19.11 Binary and Other Bases	363
19.12 Geometric Functional Equations	370
19.13 Approximating by Linear Functions	379
19.14 Extremal Element Method	385
19.15 Fixed Points	393
19.16 Functional Equations for Polynomials	395
19.17 Functional Inequalities	410
19.18 Miscellaneous Problems	423
19.18.1 Inductive Arguments	423
19.18.2 Basic Properties of Functions	444
19.18.3 Continuous Functions	475
19.18.4 The Odd and Even Parts of Functions	491
19.18.5 Constructive Problems	494
19.18.6 Functional Equations Using Special Groups	500
19.18.7 Density	502
19.18.8 Iterations	508
19.18.9 Discrete Subharmonic Functions	520
20 Notation and Abbreviations	525
20.1 Notation	525
20.2 Abbreviations	526
Bibliography	527
