

Contents

1	Data Processing Procedures in Strategic Planning	9
2	On Error Probability and Measurement Reliability	15
2.1	Comparing solutions by distance	15
2.2	Measuring reliability	18
2.3	Some more notions and concepts	22
3	Fuzzy approach to the evaluation of measured values	23
3.1	Uncertainty in the measurement	23
3.2	Averaging of measured values	24
3.3	Expressing the level of consensus among the measurements	26
3.4	Optimization of the consensus	27
4	Implementation of Algorithm for Missing Values Im- putation in Categorical Data Using Association Rules	29
4.1	Missing values imputation methods	29
4.2	Algorithm for Missing Values Imputation in Categori- cal Data Using Association Rules	32
4.2.1	Generating Association Rules	32
4.2.2	Obtaining Complete Data Set for Generating Association Rules	33
		3

CONTENTS

4.2.3	Algorithm for missing values imputation in categorical data using association rules	33
4.2.4	Testing procedure of missing values imputation algorithm	35
4.3	Implementation of the Algorithm for Missing Values Imputation in Categorical Data using Association Rules	35
4.3.1	Implementation of the Algorithm for Missing Values Imputation in Categorical Data Using Association Rules in MS Excel and MS Visual Basic for Applications.	35
4.3.2	Possibilities of Weka software for missing values imputation in categorical data using association rules	38
4.4	Summary	40
5	Elimination of inaccuracies in the data	41
5.1	Standard ČSN 73 4055	41
5.2	Data used in the calculation	42
5.2.1	Payment zones	43
5.3	Description of the formula	43
5.4	Verification of Model accuracy	44
5.4.1	Example building	45
5.5	Improvement of the input data	46
5.5.1	Location based improvement	46
5.5.2	Time based improvement	47
6	Knowledge Management	49
6.1	Can improved concept of metadata management help to enhance systems as BIM? . . .	49
6.1.1	Current knowledge management issues	50
6.1.2	Knowledge management	51
6.1.3	Building Information Modeling	52
6.1.4	Knowledge & Metadata Management Systems	53

6.1.5	How to introduce and implement Knowledge management system within a company	55
6.1.6	Concept and role of Metadata	57
6.1.7	Metadata management	58
6.2	Conclusion	62
7	Coupling of Data Mining with Ontology: A Happy Marriage	63
7.1	Introduction	63
7.2	What is an ontology	64
7.2.1	Basic elements of the ontology	65
7.2.2	Types of ontologies	65
7.2.3	Deep and shallow ontologies	68
7.2.4	Reasoning	68
7.3	Use of ontologies in data mining	69
7.3.1	Possible roles of ontology in data mining	70
7.3.2	Ontology learning	72
7.3.3	Application of ontologies in data mining (and vice versa)	72
7.4	Conclusion	76
8	Data Mining With Neural Networks	77
8.1	Introduction	77
8.2	Multilayer Feedforward Network	78
8.2.1	Artificial Neuron	78
8.2.2	Neural Network Learning (Training)	80
8.2.3	Backpropagation Algorithm	82
8.3	Stock Price Prediction and Missing Stock Price Imputation by Neural Networks	83
8.3.1	Predicting Stock Price	84
8.3.2	Network Architecture and Settings	84
8.3.3	Network Inputs	84
8.3.4	Training Data Set and Testing Data Set	85
8.3.5	Why Is the Choice of Inputs so Important	85

CONTENTS

8.3.6	How to Choose Proper Inputs	86
9	Designing data warehouses for long-term experiments	89
9.1	Terminology	90
9.1.1	OLAP	90
9.1.2	DWH	90
9.2	OLTP vs. DWH	91
9.3	DWH Architectures	92
9.4	Logical Versus Physical Design in Data Warehouses	93
9.4.1	Logical Design	94
9.5	Physical Design	95
9.5.1	Index	98
10	RapidMiner - description of the methods	101
10.1	Outliers	101
10.2	Missing values	103
10.3	TIMODAZ data cleaning procedures in the program RapidMiner	104
10.3.1	MAT - Moving Average, Thresholding	104
10.3.2	TMAT - Thresholding, Moving Average, Thresholding	105
10.3.3	Thresholding	107
10.3.4	Matmata (Moving Average Moving Average Thresholding)	107
10.3.5	Aggregation of data calculate the average hourly and daily average	107
10.3.6	Evaluation procedures	108

List of Figures

4.1	Missing Values Imputation in Categorical Data version 2.00 [27]	36
4.2	Association rules generated using Weka software . . .	40
5.1	Example situation for distance approximation	47
5.2	Price indexes of One-dwelling buildings according to CC [34] . 2005 average = 100. Czech Statistical Office. 15.11.2012. Data for graph was retrieved 25. 12. 2012 from http://www.czso.cz/csu/redakce.nsf/i/ipc_cr	48
7.1	Ontology types. Adapted from [44]	66
7.2	Steps of the knowledge discovery in databases (KDD). Adapted from [46].	70
7.3	General framework of data mining with ontologies. Adapted from [47].	71
8.1	Multilayer feedforward network	79
8.2	Artificial neuron	80
8.3	Sigmoidal function	81
8.4	Comparing network's prediction with real price . . .	88
9.1	One layer solution	92

LIST OF FIGURES

9.2	Two layer solution	92
9.3	Three layer solution	93
9.4	Logical Versus Physical Design in Data Warehouses	93
9.5	Star Schemas	94
9.6	Snowflake schema	95
9.7	1 layer DWH	96
9.8	2 layer DWH	97
9.9	3 layer DWH	97
9.10	Relationship between an index and a table	98
10.1	Graph Δ indicating outliers	105
10.2	Graph Δ indicating outliers	106

List of Tables

5.1	Sample of Table of Price Indexes	42
5.2	Sample of Table of Price Indexes	43
5.3	Example of the table of population indexes	47
8.1	Unsupervised learning - Training patterns	81
8.2	Supervised learning - Training patterns	81
8.3	Similar inputs in CEZ stock price prediction	86
8.4	Input weights in hidden neurons	86
8.5	Input weights in hidden neurons	87
8.6	Sum of absolute values of network errors with different inputs for two time intervals - Sum of Errors = $\sum realprice - predictedprice $	88
10.1	Assessment process in terms of missing values	108
10.2	Evaluation methods in terms of purity data	108
