<b>Part I: INFINITE SERIES</b>	<b>1</b>
<b>1 Numerical series</b>	<b>1</b>
1.1 The series concept . . . . .	1
1.2 Convergent series and its sum. Divergent series . . . . .	1
1.3 Necessary condition of convergence, test for divergence . . . . .	1
1.4 Algebraic operations on series . . . . .	1
1.5 Geometric series . . . . .	2
1.6 The integral test . . . . .	2
1.7 The comparison tests . . . . .	3
1.8 The alternating series . . . . .	3
1.9 Absolute convergence . . . . .	4
1.9.1 Multiplication of series* . . . . .	5
1.10 The limit ratio (d'Alembert) test . . . . .	5
<b>2 Function series</b>	<b>6</b>
<b>3 Power series</b>	<b>6</b>
3.1 Definition . . . . .	6
3.2 Interval of convergence . . . . .	6
3.3 Properties of power series . . . . .	8
3.4 Algebraic operations on power series . . . . .	9
3.5 Taylor series of a function . . . . .	10
3.6 Taylor series expansions of some elementary functions . . . . .	11
3.7 Applications . . . . .	13
<b>4 Fourier trigonometric series</b>	<b>14</b>
4.1 Periodic and piecewise continuous functions . . . . .	14
4.1.1 Periodic functions and periodic extension of a function . . . . .	14
4.1.2 Piecewise continuous and piecewise smooth functions . . . . .	14
4.2 Fourier (trigonometric) series of a function . . . . .	14
4.3 Fourier cosine and sine series of a function . . . . .	15
4.4 Amplitude-phase angle form of Fourier series . . . . .	15
4.5 Convergence of the Fourier series . . . . .	16
4.6 Other results* . . . . .	17
4.6.1 Rate of decay, differentiation . . . . .	17
4.6.2 Parseval's identity, uniqueness . . . . .	18
4.7 Application: harmonic oscillator and periodic oscillations* . . . . .	18

<b>Part II: ORDINARY DIFFERENTIAL EQUATIONS</b>	<b>19</b>
<b>5 First order equations</b>	<b>19</b>
5.1 Differential equation, solution of a differential equation on the interval, integral curve . . .	19
5.2 Deterministic conditions, the Cauchy problem . . . . .	20
5.3 Theorem on existence and uniqueness of the maximal solution of the Cauchy problem . .	20
5.4 Separable equations . . . . .	22
5.5 Linear equations . . . . .	25
5.6 Bernoulli equations . . . . .	27
5.7 Geometrical meaning of a differential equation, direction field . . . . .	28
5.8 Exact equations . . . . .	30
<b>6 Linear second order equations</b>	<b>33</b>
6.1 Principle of superposition . . . . .	33
6.2 Deterministic conditions . . . . .	33
6.3 Theorem on existence and uniqueness of the maximal solution of the Cauchy problem . .	33
6.4 Fundamental set of solutions. Particular solution . . . . .	33
6.5 General solution of the homogeneous equation with constant coefficients . . . . .	34
6.6 Particular solution of the nonhomogeneous equation . . . . .	35
6.7 Application to the theory of vibrations . . . . .	37
6.7.1 Undamped free vibrations . . . . .	37
6.7.2 Damped free vibrations . . . . .	37
6.7.3 Forced vibrations . . . . .	38
6.8 Power series solutions of linear variable-coefficient equations . . . . .	38
<b>7 Normal systems of equations</b>	<b>41</b>
7.1 Systems of $n$ first order equations in normal form . . . . .	41
7.2 Conversion of higher order equation to a system . . . . .	41
7.3 Theorem on existence and uniqueness of the maximal solution of the Cauchy problem . .	42
7.4 Systems of 2 first order equations in normal form . . . . .	42
7.5 First integral* . . . . .	43
<b>8 Linear systems</b>	<b>45</b>
8.1 Linear systems in normal form . . . . .	45
8.2 Linear systems of 2 first order equations in normal form . . . . .	45
8.3 Linear equations as special case of linear systems . . . . .	45
8.4 Theorem on existence and uniqueness of the maximal solution of the Cauchy problem . .	46
8.5 Structure of solutions, fundamental set of solutions of the homogeneous system . . . . .	46
8.5.1 Linear (in)dependence of functions* . . . . .	47
8.5.2 The Wronski determinant* . . . . .	48

<b>9 Linear systems with constant coefficients</b>	<b>49</b>
9.1 Fundamental set of solutions (the Euler method)	49
9.2 Systems of 2 first order equations in normal form	50
9.2.1 Eigenvalues are real distinct	50
9.2.2 Eigenvalues are complex conjugate	51
9.2.3 A repeated eigenvalue*	51
9.3 Non-homogeneous systems	52
9.4 Linear autonomous system in normal form, phase trajectories	53
9.5 Phase trajectories of a linear autonomous system of 2 first order equations in normal form	53
<b>10 Autonomous systems</b>	<b>58</b>
10.1 Autonomous systems in normal form	58
10.2 Autonomous equations	58
10.3 Autonomous systems of 2 first order equations in normal form (planar systems) - basic assumption	59
10.4 The phase plane, phase trajectory	60
10.5 Existence and uniqueness	60
10.6 Equilibrium point	61
10.7 Translation property	61
10.8 Properties of trajectories	62
10.9 Trajectories of systems of 2 first order equations and the first integral	62
10.10 Newtonian systems	64
10.11 Phase plane analysis	65
10.12 Autonomous systems of $n$ first order equations in normal form*	66
10.12.1 Basic assumption	66
10.12.2 Existence and uniqueness	66
10.12.3 Translation property	67
10.12.4 Properties of trajectories	68
10.12.5 Dynamic systems	68
<b>11 Appendix</b>	<b>69</b>
11.1 Elementary functions, the general power function	69
11.2 Inverse function	69
11.3 Implicit function theorem	70
11.4 Planar curves	71
11.5 Integral as a function of its upper limit	72
11.6 Improper integral	73
<b>Bibliography</b>	<b>73</b>
