

CONTENT

INTRODUCTION	9
1 HISTORICAL AND PRESENT BACKGROUND OF CHRONOBIOLOGY AS A SCIENTIFIC DISCIPLINE	
<i>Ludmila Jančoková</i>	11
2 BIOLOGICAL RHYTHMS IN NEUROMUSCULAR PERFORMANCE	
<i>Milan Sedliak</i>	40
2.1 Diurnal variation in muscle strength and power	41
2.2 Is the diurnal variation in muscle strength and power real?	43
2.3 Body temperature and exercise rhythms	50
2.4 Local and/or peripheral origin of circadian rhythm in muscle strength and power	51
3 TIME-OF-DAY-SPECIFIC TRAINING ADAPTATIONS	
<i>Milan Sedliak</i>	63
3.1 Time-of-day-specific adaptation to resistance training – maximum strength and power	64
3.2 Time-of-day-specific adaptation to resistance training – skeletal muscle hypertrophy	70
3.3 Resistance exercise as zeitgeber	79
3.4 Final conclusions and practical implications	81
4 RAMADAN AND SPORTS PERFORMANCE	
<i>Hadhom Alabed and Jim Waterhouse</i>	91
4.1 Changes Observed during the Four Weeks of Ramadan	91
4.1.1 Energy balance	91
4.1.2 Medical considerations	93
4.1.3 Implications for sport and athletics	93
4.2 Reasons for Changes in Athletic Performance during the Four Weeks of Ramadan	94
4.2.1 Sleep loss	95
4.2.2 Fasting	95

4.2.3 General conclusions	96
4.3 Changes during the Course of the Daytime Fast in Ramadan	96
4.3.1 Normal rhythmic changes seen during the course of a day	96
4.3.1.1 The body clock and zeitgebers	96
4.3.1.2 Endogenous and exogenous components of a measured rhythm	98
4.3.2 Rhythmic changes in performance measures	99
4.3.2.1 Physical performance	100
4.3.2.2 Mental performance at "simple" and "complex" tasks	100
4.4 Altered Daily Rhythms in Ramadan	103
4.4.1 Hormones and the sleep-wake cycle	103
4.4.2 Gastrointestinal activity and the metabolism of absorbed Foodstuffs	104
4.4.3 Possible causes of the altered rhythms	105
4.4.4 Implications for the athlete during Ramadan	106

PART II

A LABORATORY-BASED STUDY OF CHANGES DURING A SINGLE DAY OF FASTING

4.5 Changing Effects during the Course of a Daytime Fast	107
4.6 Methods	108
4.6.1 Subjects and protocol	108
4.6.2 Measurements made	109
4.6.3 Statistical analysis	111
4.7 Results	112
4.7.1 Questionnaires	112
4.7.1.1 Drinking	112
4.7.1.2 Eating	112
4.7.1.3 Physical, mental and social activities	113
4.7.1.4 Fatigue	113
4.7.2 Urine osmolality	114
4.7.3 Performance measures	114
4.7.4 Correlations between the variables	117
4.8 Discussion	117

4.8.1 General conclusions and implications for studies of Ramadan	120
PART III	
IMPLICATIONS FOR TRAINING IN RAMADAN	121
4.9 Time of Training	122
4.9.1 During normal circumstances	122
4.9.2 During Ramadan	123
4.10 General Conclusions	124
5 DESYNCHRONISATION OF CIRCADIAN RHYTHMS IN ATHLETES: JET LAG SYNDROME	
<i>Pavel Homolka et al.</i>	129
5.1 Travel Fatigue	129
5.2 Jet Lag Syndrome	130
5.3 General Recommendations for Coping with Jet Lag	
Symptoms	132
5.4 Experience of the Czech Olympic Teams with Trans-meridian Travel	135
5.5 Altering Biorhythms by Using Medications	137
EPILOGUE	142
