Chapter 1 Isotope-Labelling of Methyl Groups for NMR Studies of Large Proteins 1
Michael J. Plevin and Jérôme Boisbouvier

1.1 Introduction—Large Proteins and Solution NMR Spectroscopy 1
1.1.1 Isotope-Labelling and Protein NMR Spectroscopy 1
1.1.2 General Considerations for NMR Studies of Larger Proteins 2
1.1.3 NMR Experiments Designed for Larger Systems 4
1.2 Using Methyl Groups as Probes for NMR Spectroscopy 6
1.2.1 Why the Methyl Group? 6
1.2.2 Strategies for Selective Protonation of Methyl Groups in Perdeuterated Proteins 6
1.3 Strategies for Sequence-Specific Resonance Assignment in High Molecular Weight Proteins 13
1.3.1 Resonance Assignment of Large Proteins by 'Divide and Conquer' 14
1.3.2 Resonance Assignment by Mutagenesis 16
1.3.3 Time Frames for Resonance Aassignment of Methyl Groups in Very Large Proteins 17
1.4 High Molecular Weight Protein Applications of Methyl-Specific Isotope-Labelling 18
1.5 Conclusions and Future Directions 18
Acknowledgements 21

Chapter 2 Low-γ Nuclei Detection Experiments for Biomolecular NMR **25**
Koh Takeuchi, Maayan Gal, Ichio Shimada and Gerhard Wagner

2.1 Introduction 25
2.2 Relaxation Properties of Low-γ Nuclei 28
2.3 Management of One-Bond Couplings in Low-γ Detection Experiments 31
2.4 C^{α}-Detection Experiments for Main-Chain Resonance Assignments 35
2.5 $^{15}N_H$-Detection Experiments for Main-Chain Resonance Assignments 43
2.6 Low-γ Detection in Interaction Studies and Structure Determination 46
2.7 Conclusion 47
Acknowledgements 48
References 49

Chapter 3 Making the Most of Chemical Shifts **53**
R. William Broadhurst

3.1 Introduction 53
3.2 The Chemical Shift Tensor 54
3.3 Referencing, Databases and Re-referencing 56
3.4 Reference States and Secondary Chemical Shifts 58
3.5 Detecting Structure and Flexibility 60
3.6 Predicting Dihedral Angles 63
3.7 Predicting Isotropic Chemical Shifts from Atomic Coordinates 66
3.8 Predicting Tertiary Structure from Chemical Shifts 69
3.9 Predicting Quaternary Structure from Chemical Shifts 72
3.10 Conclusions 76
Acknowledgements 76
References 76

Chapter 4 Protein Structure Determination using Sparse NMR Data **84**
Oliver F. Lange

4.1 Introduction 84
4.2 Force-Fields 88
4.2.1 Introduction to Force-Fields 88
4.2.2 Hybrid Molecular Mechanics Force-Fields 88
4.2.3 The ROSETTA All-Atom Force-Field 88
4.2.4 Relaxing the Structure 90
4.2.5 ROSETTA All-Atom Force-Field Accuracy 90

4.3 NMR Restraints 92
4.3.1 Nuclear Overhauser Effect 92
4.3.2 Residual Dipolar Coupling 96
4.3.3 Paramagnetic Relaxation Enhancement 97
4.3.4 Pseudo-Contact Chemical Shifts 98
4.3.5 Chemical Shift 99
4.4 Optimization Methods 101
4.4.1 Challenges for Optimisation Methods 101
4.4.2 Top-Down *vs.* Bottom-Up 102
4.4.3 Resolution-Adapted Structural Recombination 103
4.5 Concluding Remarks 104
Acknowledgements 105
References 105

Chapter 5 NMR Studies of Disordered but Functional Proteins 111
H. Jane Dyson

5.1 Introduction 111
5.2 NMR Methods Used for Disordered Proteins 112
5.3 Coupled Folding and Binding 112
5.3.1 Folded and Unfolded CBP Domains Bind IDP Partners 113
5.3.2 The NFκB–IκBα Interaction: a Fold/Unfold Symphony 117
5.3.3 Binding Without Folding 121
5.4 Partly Folded and Molten Globule-Like States 121
5.4.1 Ankyrin Repeat Proteins 121
5.4.2 Binding-Induced Molten Globule-Like States 122
5.5 Functional Disorder in Folded States 122
5.5.1 Sequence Specificity of Zinc-Finger Proteins 122
5.5.2 Effects of Alternative Splicing 124
5.6 Conclusions 125
References 125

Chapter 6 Paramagnetic NMR Spectroscopy and Lowly Populated States 130
Jesika T. Schilder, Mathias A. S. Hass, Peter H. J. Keizers and Marcellus Ubbink

6.1 Introduction 130
6.1.1 Lowly Populated States and Paramagnetic NMR Spectroscopy 130
6.1.2 Paramagnetic Centers 131
6.1.3 Ensemble Modelling 133

6.2 Residual Dipolar Coupling and Pseudo-Contact Shifts 133
6.2.1 RDC Theory 133
6.2.2 PCS Theory 134
6.2.3 Applications for Studying Lowly Populated States 135
6.3 Paramagnetic Relaxation Enhancement 135
6.3.1 PRE Theory 135
6.3.2 Applications for Studying Lowly Populated States 138
6.4 Relaxation Dispersion 142
6.4.1 RD Theory 142
6.4.2 Applications for Studying Lowly Populated States 144
6.5 Conclusion and Future Perspectives 145
References 145

Chapter 7 NMR Relaxation Dispersion Studies of Large Enzymes in Solution 151
Sean K. Whittier and J. Patrick Loria

7.1 Introduction 151
7.2 Conformational Exchange 152
7.3 The Benefits of TROSY 155
7.3.1 ^{1}H–^{15}N TROSY 155
7.3.2 Methyl-TROSY 157
7.4 Isotopic Labelling Strategies 159
7.5 Applications 159
7.5.1 Imidazole Glycerol Phosphate Synthase 159
7.5.2 Triosephosphate Isomerase 161
7.6 Conclusions 162
Acknowledgements 162
References 162

Chapter 8 Residual Dipolar Couplings as a Tool for the Study of Protein Conformation and Conformational Flexibility 166
Loïc Salmon, Phineus Markwick and Martin Blackledge

8.1 Introduction 166
8.2 Residual Dipolar Couplings as Probes of Protein Conformation 168
8.3 Residual Dipolar Couplings for Structure Determination 169
8.4 Residual Dipolar Couplings for the Study of Protein Dynamics 170

8.4.1 Domain Dynamics 171
8.4.2 Local Backbone Dynamics 171
8.5 Conclusions 180
References 180

Chapter 9 Characterising RNA Dynamics using NMR Residual Dipolar Couplings 184
Catherine D. Eichhorn, Shan Yang and Hashim M. Al-Hashimi

9.1 Introduction 184
9.2 Residual Dipolar Coupling Theory 185
9.2.1 The Dipolar Interaction 185
9.2.2 The Alignment Tensor 187
9.3 Partial Alignment of Nucleic Acids 188
9.3.1 Ordering Media-Induced Alignment 189
9.3.2 Magnetic-Field-Induced Alignment 192
9.4 Measurement of RDCs in Nucleic Acids 193
9.5 Dynamic Interpretation of RDCs Measured in RNA 197
9.5.1 Dynamics Information Contained Within RDCs 197
9.5.2 Decoupling Internal and Overall Motions by Domain Elongation 199
9.5.3 Inter-Helical Motions from Order Tensor Analysis of RDCs 201
9.5.4 Constructing Dynamic Ensembles 202
9.5.5 Explicit Treatment of Motional Couplings 204
9.6 Example Applications in Studies of RNA Dynamics From RDCs 205
9.7 Summary and Future Perspectives 208
Acknowledgements 209
References 209

Chapter 10 Non-Canonical Ligand-Binding Events as Detected by NMR 216
Erik R. P. Zuiderweg

10.1 A Brief Refresher on NMR-Focussed Ligand Binding 216
10.1.1 Ligand Binding Thermodynamics and Kinetics 216
10.1.2 Ligand Binding and NMR 218
10.2 The Proton Ligands to Inositol Hexakis Phosphate Take Five Instead of Three Log Units to Complete Binding 221

10.3 The Binding of Inositol Hexakis Phosphate to Hemoglobin: Fast-Exchange Kinetics for Nanomolar Affinity 226
10.4 Non-Canonical Line Broadening in Slow Exchange after Equivalence is Reached 235
10.5 Binding of a 10 kDa Ligand to a 70 kDa Protein Does not Result in Significant Line Broadening of the NMR Signals of the 10 kDa Ligand 242
10.5.1 A View From the DnaJ Perspective 242
10.5.2 A View from the DnaK Perspective 247
10.5.3 Relevance of the J-Domain–DnaK Complex 248
Acknowledgements 251
References 252

Chapter 11 Recent Advances in Biomolecular NMR for Drug Discovery 254
Carine Farenc and Gregg Siegal

11.1 Introduction 254
11.2 NMR for Ligand Discovery 255
11.2.1 Protein-Observed NMR 255
11.2.2 Ligand-Observed NMR 257
11.3 Hit Prioritisation 261
11.4 Protein–Ligand Structures 262
11.5 In-Cell NMR Spectroscopy 266
11.6 Perspectives 267
References 267

Chapter 12 NMR of Membrane Proteins 271
Mark Bostock and Daniel Nietlispach

12.1 Introduction 271
12.2 Protein Expression 273
12.2.1 Escherichia coli 273
12.2.2 Yeast 274
12.2.3 Baculovirus/Insect Expression 275
12.2.4 Mammalian 276
12.2.5 Cell-Free Expression 276
12.2.6 Directed Evolution 278
12.3 Membrane Mimics 278
12.3.1 Detergents 278
12.3.2 Fluorinated Surfactants 283
12.3.3 Amphipols 284
12.3.4 Problems with Micelles 285
12.3.5 Nanolipoprotein Particles 286

12.3.6 NMR Studies using Nanodiscs 287
12.3.7 Bicelles 287
12.4 Isotope-Labelling Strategies 289
12.5 Structure Determination 292
12.5.1 Paramagnetic Effects 293
12.5.2 Residual Dipolar Couplings 295
12.5.3 Chemical Shift Prediction 297
12.6 NMR Method Development 298
12.6.1 ^{13}C Direct Detection 298
12.6.2 Alternative Sampling 299
12.7 Functional Information 300
12.7.1 Dynamics 300
12.7.2 Variation of Experimental Conditions 301
12.7.3 Ligand-Binding Studies 301
12.8 Conclusions 303
References 304

Chapter 13 Recent Developments in Biomolecular Solid-State NMR 318
Victoria A. Higman and Anthony Watts

13.1 Introduction 318
13.2 Samples 319
13.3 Assignment Strategies 322
13.4 Labelling Strategies 322
13.5 Structure Determination 323
13.6 Dynamics 324
13.7 Static Solid-State NMR 325
13.8 Proton Detection 325
13.9 Ultra-Fast Spinning 326
13.10 Dynamic Nuclear Polarisation 326
13.11 Approaches Using Complementary Techniques 328
13.12 Conclusions and Perspectives 328
References 329

Subject Index 335
