<b>Preface</b>	<b>viii</b>
<b>Introduction</b>	<b>1</b>
<b>Quality assurance in bacteriology</b>	<b>2</b>
Introduction	2
Definitions	2
Internal quality control	6
External quality assessment	16
<b>PART I</b>	
<b>Bacteriological investigations</b>	<b>19</b>
<b>Blood</b>	<b>20</b>
Introduction	20
When and where bacteraemia may occur	20
Blood collection	20
Blood-culture media	22
Processing of blood cultures	23
<b>Cerebrospinal fluid</b>	<b>25</b>
Introduction	25
Collection and transportation of specimens	25
Macroscopic inspection	26
Microscopic examination	26
Preliminary identification	28
Susceptibility testing	29
<b>Urine</b>	<b>30</b>
Introduction	30
Specimen collection	30
Culture and interpretation	32
Interpretation of quantitative urine culture results	34
Identification	35
Susceptibility tests	36
<b>Stool</b>	<b>37</b>
Introduction	37
Etiological agents and clinical features	37
Appropriate use of laboratory resources	39
Collection and transport of stool specimens	40
Visual examination of stool specimens	41
Enrichment and inoculation of stool specimens	41
Media for enteric pathogens	42
Primary isolation	42
Preliminary identification of isolates	44

Final microbiological identification	50
Serological identification	54
<b>Upper respiratory tract infections</b>	<b>60</b>
Introduction	60
Normal flora of the pharynx	60
Bacterial agents of pharyngitis	61
Collection and dispatch of specimens	62
Direct microscopy	62
Culture and identification	63
Susceptibility testing	65
<b>Lower respiratory tract infections</b>	<b>66</b>
Introduction	66
The most common infections	66
Collection of sputum specimens	68
Processing of sputum in the laboratory (for non-tuberculous infections)	68
Culture for <i>Mycobacterium tuberculosis</i>	72
Interpretation of cultures for <i>M. tuberculosis</i>	74
General note on safety	74
<b>Sexually transmitted diseases</b>	<b>76</b>
Introduction	76
Urethritis in men	77
Genital specimens from women	79
Specimens from genital ulcers	82
<b>Purulent exudates, wounds and abscesses</b>	<b>86</b>
Introduction	86
Commonly encountered clinical conditions and the most frequent etiological agents	86
Collection and transportation of specimens	89
Macroscopic evaluation	90
Microscopic examination	91
Culture	92
Identification	93
Susceptibility testing	97
<b>Anaerobic bacteriology</b>	<b>98</b>
Introduction	98
Description of bacteria in relation to oxygen requirement	98
Bacteriology	98
<b>Antimicrobial susceptibility testing</b>	<b>103</b>
Introduction	103
General principles of antimicrobial susceptibility testing	103
Clinical definition of terms "resistant" and "susceptible": the three category system	104
Indications for routine susceptibility tests	106

Choice of drugs for routine susceptibility tests in the clinical laboratory	107
The modified Kirby–Bauer method	109
Direct versus indirect susceptibility tests	117
Technical factors influencing the size of the zone in the disc-diffusion method	118
Quality control	120
<b>Serological tests</b>	<b>122</b>
Introduction	122
Quality control measures	122
Serological reactions	125
Serological tests for syphilis	126
Febrile agglutinins tests	133
Antistreptolysin O test	135
Bacterial antigen tests	137
<b>PART II</b>	
<b>Essential media and reagents</b>	<b>141</b>
<b>Introduction</b>	<b>142</b>
<b>Pathogens, media and diagnostic reagents</b>	<b>143</b>
Blood	144
Cerebrospinal fluid	144
Urine	145
Stool	146
Upper respiratory tract	147
Lower respiratory tract	148
Urogenital specimens for exclusion of sexually transmitted diseases	149
Pus and exudates	149
List of recommended media and diagnostic reagents for the intermediate microbiological laboratory	150
<b>Selected further reading</b>	<b>154</b>
<b>Index</b>	<b>155</b>
