

Contents

Preface	ix
Acknowledgements	xi
Acronyms and abbreviations	xiii
Introduction	1
References	2
1. History of cardiovascular epidemiology	3
Introduction	3
The modern era	5
References	6
2. General principles	8
Concepts	8
Objectives of cardiovascular disease surveys	9
Overview	9
Frequency and distributions	10
Associations	10
Natural history of diseases	11
Trends	12
Trials	17
Health services research	17
Unique aspects of cardiovascular disease epidemiology	18
Ethics of epidemiological research	20
Introduction	20
Basic precepts	20
Informed consent	21
Rewards and inducements	22
Responsibility to diseased or high-risk subjects	22
Confidentiality	22
Ethical review panels	23
Special circumstances in epidemiological and public health research	23

CONTENTS

Interpretation of data: bias and confounding	25
Overview	25
Random error	25
Systematic error or bias	26
Confounding	30
Overview	31
Statistical associations	31
Criteria for causal inference	32
Design of research studies to determine causation	33
Use and misuse of epidemiological data	33
Misuse of survey data	33
Regression dilution bias	34
Generalizability	34
References	35
3. Study designs	37
Overview	37
Ecological studies	37
Case reports and series	39
Cross-sectional surveys	40
Case-controls studies	43
Cohort studies	45
Trials	48
Community trials	48
Clinical trials	49
Genetic epidemiology	52
Sample size and power	55
Studies of continuous variables	57
Other considerations	58
Statistical analysis	58
Risk assessment	60
Relative risk	60
Odds ratio	60
Attributable risk	60
Population attributable risk	61
Absolute risk	61
References	62
4. Principles of study design and measurement	66
Overview	66
Hypotheses	66
Study design	66
Objectives and specific aims	66

Population definition	67
Sample size	67
Measurements	67
Quality control	68
Data handling	68
5. Data sources	69
Overview	69
Vital statistics	69
Routine patient data	70
Insurance data	71
Interview data	71
Observation of subjects	71
Physical measurements	72
Unobtrusive measurements	72
References	73
6. Conducting the research	74
Overview	74
Hypotheses	74
Specific aims and objectives	75
Selecting and defining a population	76
Available data	76
Choosing data collection instruments	80
Pilot studies	83
Manual of operations	85
Sample participation and collection	88
Record abstraction	88
Sampling and recruitment	89
Staff selection, training and supervision	89
Data handling	91
Quality control	94
Running the study	96
References	97
7. Mortality surveillance	99
Introduction	99
Background	99
Mortality issues specific to CVD	101
Methods	103
Evaluation of available data	103
Specific approaches	104
Evaluation of mortality data	107

CONTENTS

Standardized death rates	107
References	109
8. Morbidity surveillance	110
Introduction	110
Registries	111
Overview	111
Uses of registries	111
Examples of registries	112
The WHO myocardial infarction register	112
The WHO MONICA Project	113
Atherosclerosis risk in communities (ARIC)	114
The Minnesota Heart Survey (MHS)	115
American College of Cardiology/European Society of Cardiology definition	115
Stroke surveys	116
Heart failure	116
Peripheral vascular disease (PVD)	117
Other registries	117
Registries in developing countries	117
Establishing and Running a Register	118
Location and setting of the register	119
Funding	119
Management	119
Staffing	119
Good relationships with other departments	120
Statistical analysis	120
Data collection	120
"Hot" vs "cold" pursuit	121
Quality control	121
A "Happy" register	122
Knowing when to stop	122
References	122
9. Population surveys	126
Introduction	126
Questionnaires and medical records	127
Angina pectoris and other cardiovascular symptoms	127
Medical history and the prevalence of diagnosed disease	127
Measurements of health status and quality of life	128
Demographic data	129
Occupation and socioeconomic status	130

Family history	131
Size at birth	132
Participant's own medical history	133
Smoking	133
Alcohol	134
Psychosocial factors	136
Physical activity and energy expenditure	137
Activity diaries	139
Dietary intake measurements	140
24-hour recall	142
Diet history	142
Food frequency questionnaires	143
Household food inventory	145
Food analysis	145
Physical examination	145
Anthropometry	146
Clinical examination of the heart	149
Examination of retinal blood vessels	149
Blood pressure measurement	150
Measurement of body fat mass	155
Measurement of cardiorespiratory fitness	157
Electrocardiography	159
Recording of the electrocardiogram	159
Coding of the ECG	159
Ultrasound of the heart	161
M-mode echocardiography	161
Two-dimensional echocardiography	163
Doppler ultrasound	163
Ultrasound of peripheral arteries	164
Ultrasound of the carotid arteries	164
Ultrasound of the abdominal aorta	165
Endothelium-dependent vasodilatation	165
Coronary calcification by electron beam computed tomography	166
Collection and analysis of biological specimens	166
Blood sampling	166
Plasma lipids	167
Glucose tolerance testing and insulin sensitivity	168
Methods in genetic studies	170
Other biological specimens	171
References	172
Glossary	181
List of Appendices 1–37 (on CD Rom)	185
