

Contents

1	Preface	6
2	Refinement of the Semiconductor Device Models	6
2.1	Improving the Accuracy of the GaAsFET Model	6
2.1.1	Updating the Model Equations	6
2.1.2	Identifying the Model Parameters	7
2.1.3	Using the Updated GaAsFET Model as the pHEMT Representation	7
2.2	Improving the Robustness of the MOSFET Model	7
2.2.1	Necessity for Ensuring the Convergence	8
2.2.2	Discontinuities of the Classical Models	8
2.2.3	Solution of the Problem by Exponential Smoothing	9
3	Advanced Algorithm for Solving the Nonlinear Systems of Algebraic-Differential Equations	11
3.1	Fundamental Formulae of the Implicit Integration Method	11
3.1.1	The Predictor	11
3.1.2	The Corrector	12
3.1.3	Automatic Determination of a New Integration Step and Order . .	12
3.2	A New Formula for the Time Domain Sensitivity Analysis	14
4	Testing the System in Digital and Analog Domains	14
4.1	CMOS Radio Frequency Flip-Flop	14
4.2	CMOS Radio Frequency Four-Quadrant Multiplier	18
5	Conclusions	20
	References	20
