PART

**I**  
**FRAMEWORK FOR MODELING,  
ESTIMATION, AND  
MANAGEMENT OF  
ANIMAL POPULATIONS**

---

CHAPTER

**1**

**Introduction to Population Ecology**

- 1.1. Some Definitions 3
- 1.2. Population Dynamics 4
- 1.3. Factors Affecting Populations 4
- 1.4. Management of Animal Populations 6
- 1.5. Individuals, Fitness, and Life History Characteristics 7
- 1.6. Community Dynamics 9
- 1.7. Discussion 9

---

CHAPTER

**2**

**Scientific Process in Animal Ecology**

- 2.1. Causation in Animal Ecology 11
- 2.2. Approaches to the Investigation of Causes 12
- 2.3. Scientific Methods 13

- 2.4. Hypothesis Confirmation 16
- 2.5. Inductive Logic in Scientific Method 17
- 2.6. Statistical Inference 18
- 2.7. Investigating Complementary Hypotheses 18
- 2.8. Discussion 19

---

CHAPTER

**3**

**Models and the Investigation of Populations**

- 3.1. Types of Biological Models 22
- 3.2. Keys to Successful Model Use 22
- 3.3. Uses of Models in Population Biology 23
- 3.4. Determinants of Model Utility 28
- 3.5. Hypotheses, Models, and Science 30
- 3.6. Discussion 31

---

CHAPTER

**4**

**Estimation and Hypothesis Testing  
in Animal Ecology**

- 4.1. Statistical Distributions 34
- 4.2. Parameter Estimation 42
- 4.3. Hypothesis Testing 50
- 4.4. Information-Theoretic Approaches 55
- 4.5. Bayesian Extension of Likelihood Theory 57
- 4.6. Discussion 58

## 5

## Survey Sampling and the Estimation of Population Parameters

- 5.1. Sampling Issues 60
- 5.2. Features of a Sampling Design 61
- 5.3. Simple Random and Stratified Random Sampling 62
- 5.4. Other Sampling Approaches 67
- 5.5. Common Problems in Sampling Designs 74
- 5.6. Discussion 76

## 6

## Design of Experiments in Animal Ecology

- 6.1. Principles of Experimental Design 80
- 6.2. Completely Randomized Designs 83
- 6.3. Randomized Block Designs 89
- 6.4. Covariation and Analysis of Covariance 91
- 6.5. Hierarchical Designs 92
- 6.6. Random Effects and Nested Designs 97
- 6.7. Statistical Power and Experimental Design 100
- 6.8. Constrained Experimental Designs and Quasi-Experiments 102
- 6.9. Discussion 106

## II

## DYNAMIC MODELING OF ANIMAL POPULATIONS

## 7

### Principles of Model Development and Assessment

- 7.1. Modeling Goals 113
- 7.2. Attributes of Population Models 114
- 7.3. Describing Population Models 117
- 7.4. Constructing a Population Model 122
- 7.5. Model Assessment 126
- 7.6. A Systematic Approach to the Modeling of Animal Populations 131
- 7.7. Discussion 134

## 8

## Traditional Models of Population Dynamics

- 8.1. Density-Independent Growth—The Exponential Model 136
- 8.2. Density-Dependent Growth—The Logistic Model 139
- 8.3. Cohort Models 141
- 8.4. Models with Age Structure 143
- 8.5. Models with Size Structure 157
- 8.6. Models with Geographic Structure 159
- 8.7. Lotka–Volterra Predator–Prey Models 161
- 8.8. Models of Competing Populations 164
- 8.9. A General Model for Interacting Species 170
- 8.10. Discussion 171

## 9

## Model Identification with Time Series Data

- 9.1. Model Identification Based on Ordinary Least Squares 174
- 9.2. Other Measures of Model Fit 176
- 9.3. Correlated Estimates of Population Size 178
- 9.4. Optimal Identification 178
- 9.5. Identifying Models with Population Size as a Function of Time 179
- 9.6. Identifying Models Using Lagrangian Multipliers 181
- 9.7. Stability of Parameter Estimates 181
- 9.8. Identifying System Properties in the Absence of a Specified Model 182
- 9.9. Discussion 184

## 10

## Stochastic Processes in Population Models

- 10.1. Bernoulli Counting Processes 189
- 10.2. Poisson Counting Processes 192
- 10.3. Discrete Markov Processes 197
- 10.4. Continuous Markov Processes 202
- 10.5. Semi-Markov Processes 205
- 10.6. Markov Decision Processes 207
- 10.7. Brownian Motion 210
- 10.8. Other Stochastic Processes 213
- 10.9. Discussion 220

**11****The Use of Models in Conservation and Management**

- 11.1. Dynamics of Harvested Populations 223
- 11.2. Conservation and Extinction of Populations 231
- 11.3. Discussion 237

## PART

**III****ESTIMATION METHODS FOR ANIMAL POPULATIONS**

## CHAPTER

**12****Estimating Abundance Based on Counts**

- 12.1. Overview of Abundance Estimation 242
- 12.2. A Canonical Population Estimator 243
- 12.3. Population Censuses 245
- 12.4. Complete Detectability of Individuals on Sample Units of Equal Area 245
- 12.5. Complete Detectability of Individuals on Sample Units of Unequal Area 247
- 12.6. Partial Detectability of Individuals on Sample Units 250
- 12.7. Indices to Population Abundance or Density 257
- 12.8. Discussion 261

## CHAPTER

**13****Estimating Abundance with Distance-Based Methods**

- 13.1. Point-to-Object Methods 263
- 13.2. Line Transect Sampling 265
- 13.3. Point Sampling 278
- 13.4. Design of Line Transect and Point Sampling Studies 281
- 13.5. Other Issues 286
- 13.6. Discussion 287

**14****Estimating Abundance for Closed Populations with Mark-Recapture Methods**

- 14.1. Two-Sample Lincoln-Petersen Estimator 290
- 14.2. K-Sample Capture-Recapture Models 296
- 14.3. Density Estimation with Capture-Recapture 314
- 14.4. Removal Methods 320
- 14.5. Change-in-Ratio Methods 325
- 14.6. Discussion 331

## CHAPTER

**15****Estimation of Demographic Parameters**

- 15.1. Detectability and Demographic Rate Parameters 334
- 15.2. Analysis of Age Frequencies 337
- 15.3. Analysis of Discrete Survival and Nest Success Data 343
- 15.4. Analysis of Failure Times 351
- 15.5. Random Effects and Known-Fate Data 361
- 15.6. Discussion 362

## CHAPTER

**16****Estimation of Survival Rates with Band Recoveries**

- 16.1. Single-Age Models 366
- 16.2. Multiple-Age Models 383
- 16.3. Reward Studies for Estimating Reporting Rates 391
- 16.4. Analysis of Band Recoveries for Nonharvested Species 398
- 16.5. Poststratification of Recoveries and Analysis of Movements 402
- 16.6. Design of Banding Studies 406
- 16.7. Discussion 414

**17****Estimating Survival, Movement, and Other State Transitions with Mark–Recapture Methods**

- 17.1. Single-Age Models 418
- 17.2. Multiple-Age Models 438
- 17.3. Multistate Models 454
- 17.4. Reverse-Time Models 468
- 17.5. Mark–Recapture with Auxiliary Data 476
- 17.6. Study Design 489
- 17.7. Discussion 492

**18****Estimating Abundance and Recruitment with Mark–Recapture Methods**

- 18.1. Data Structure 496
- 18.2. Jolly–Seber Approach 497
- 18.3. Superpopulation Approach 508
- 18.4. Pradel’s Temporal Symmetry Approach 511
- 18.5. Relationships among Approaches 518
- 18.6. Study Design 520
- 18.7. Discussion 522

**19****Combining Closed and Open Mark–Recapture Models: The Robust Design**

- 19.1. Data Structure 524
- 19.2. *Ad Hoc* Approach 529
- 19.3. Likelihood-Based Approach 535
- 19.4. Special Estimation Problems 538
- 19.5. Study Design 552
- 19.6. Discussion 553

**20****Estimation of Community Parameters**

- 20.1. An Analogy between Populations and Communities 556
- 20.2. Estimation of Species Richness 557

- 20.3. Estimating Parameters of Community Dynamics 561
- 20.4. Discussion 572

**IV****DECISION ANALYSIS FOR ANIMAL POPULATIONS****21****Optimal Decision Making in Population Biology**

- 21.1. Optimization and Population Dynamics 578
- 21.2. Objective Functions 579
- 21.3. Stationary Optimization under Equilibrium Conditions 579
- 21.4. Stationary Optimization under Nonequilibrium Conditions 580
- 21.5. Discussion 581

**22****Traditional Approaches to Optimal Decision Analysis**

- 22.1. The Geometry of Optimization 584
- 22.2. Unconstrained Optimization 585
- 22.3. Classical Programming 593
- 22.4. Nonlinear Programming 597
- 22.5. Linear Programming 601
- 22.6. Discussion 606

**23****Modern Approaches to Optimal Decision Analysis**

- 23.1. Calculus of Variations 608
- 23.2. Pontryagin’s Maximum Principle 618
- 23.3. Dynamic Programming 627
- 23.4. Heuristic Approaches 638
- 23.5. Discussion 639

## 24

### Uncertainty, Learning, and Decision Analysis

- 24.1. Decision Analysis in Natural Resource Conservation 644
- 24.2. General Framework for Decision Analysis 649
- 24.3. Uncertainty and the Control of Dynamic Resources 650
- 24.4. Optimal Control with a Single Model 651
- 24.5. Optimal Control with Multiple Models 652
- 24.6. Adaptive Optimization and Learning 653
- 24.7. Expected Value of Perfect Information 654
- 24.8. Partial Observability 655
- 24.9. Generalizations of Adaptive Optimization 656
- 24.10. Accounting for All Sources of Uncertainty 658
- 24.11. "Passive" Adaptive Optimization 658
- 24.12. Discussion 660

## 25

### Case Study: Management of the Sport Harvest of North American Waterfowl

- 25.1. Background and History 664
- 25.2. Components of a Regulatory Process 667
- 25.3. Adaptive Harvest Management 671
- 25.4. Modeling Population Dynamics 672
- 25.5. Harvest Objectives 676
- 25.6. Regulatory Alternatives 677
- 25.7. Identifying Optimal Regulations 679
- 25.8. Some Ongoing Issues in Waterfowl Harvest Management 680
- 25.9. Discussion 684

#### Appendix A

Conditional Probability and Bayes' Theorem 685

#### Appendix B

Matrix Algebra 687

- B.1. Definitions
- B.2. Matrix Addition and Multiplication
- B.3. Matrix Determinants
- B.4. Inverse of a Matrix
- B.5. Orthogonal and Orthonormal Matrices
- B.6. Trace of a Matrix
- B.7. Eigenvectors and Eigenvalues
- B.8. Linear and Quadratic Forms
- B.9. Positive-Definite and Semidefinite Matrices
- B.10. Matrix Differentiation

#### Appendix C

Differential Equations 693

- C.1. First-Order Linear Homogeneous Equations
- C.2. Nonlinear Homogeneous Equations—Stability Analysis
- C.3. Graphical Methods

#### Appendix D

Difference Equations 709

- D.1. First-Order Linear Homogeneous Equations
- D.2. Nonlinear Homogeneous Equations—Stability Analysis

#### Appendix E

Some Probability Distributions and Their Properties 721

- E.1. Discrete Distributions
- E.2. Continuous Distributions

#### Appendix F

Methods for Estimating Statistical Variation 733

- F.1. Distribution-Based Variance Estimation
- F.2. Empirical Variance Estimation
- F.3. Estimating Variances and Covariances with the Information Matrix
- F.4. Approximating Variance with the Delta Method
- F.5. Jackknife Estimators of Mean and Variance
- F.6. Bootstrap Estimation

#### Appendix G

Computer Software for Population and Community Estimation 739

- G.1. Estimation of Abundance and Density for Closed Populations
- G.2. Estimation of Abundance and Demographic Parameters for Open Populations
- G.3. Estimation of Community Parameters
- G.4. Software Availability

#### Appendix H

The Mathematics of Optimization 745

- H.1. Unconstrained Optimization
- H.2. Classical Programming
- H.3. Nonlinear Programming
- H.4. Linear Programming
- H.5. Calculus of Variations
- H.6. Pontryagin's Maximum Principle
- H.7. Dynamic Programming
