<b>Foreword .....</b>	<b>xiii</b>
<b>Preface .....</b>	<b>xv</b>
<b>Acknowledgments.....</b>	<b>xix</b>
<b>1 Introduction .....</b>	<b>1</b>
<b>2 Creating and Destroying Objects.....</b>	<b>5</b>
Item 1: Consider static factory methods instead of constructors . . . . .	5
Item 2: Consider a builder when faced with many constructor parameters . . . . .	11
Item 3: Enforce the singleton property with a private constructor or an enum type . . . . .	17
Item 4: Enforce noninstantiability with a private constructor . . . . .	19
Item 5: Avoid creating unnecessary objects . . . . .	20
Item 6: Eliminate obsolete object references . . . . .	24
Item 7: Avoid finalizers . . . . .	27
<b>3 Methods Common to All Objects.....</b>	<b>33</b>
Item 8: Obey the general contract when overriding equals . . . . .	33
Item 9: Always override hashCode when you override equals . . . . .	45
Item 10: Always override toString . . . . .	51
Item 11: Override clone judiciously . . . . .	54
Item 12: Consider implementing Comparable . . . . .	62

<b>1 Classes and Interfaces.....</b>	<b>67</b>
Item 13: Minimize the accessibility of classes and members.....	67
Item 14: In public classes, use accessor methods, not public fields .....	71
Item 15: Minimize mutability.....	73
Item 16: Favor composition over inheritance.....	81
Item 17: Design and document for inheritance or else prohibit it ..	87
Item 18: Prefer interfaces to abstract classes .....	93
Item 19: Use interfaces only to define types.....	98
Item 20: Prefer class hierarchies to tagged classes.....	100
Item 21: Use function objects to represent strategies.....	103
Item 22: Favor static member classes over nonstatic .....	106
<b>Generics .....</b>	<b>109</b>
Item 23: Don't use raw types in new code .....	109
Item 24: Eliminate unchecked warnings.....	116
Item 25: Prefer lists to arrays .....	119
Item 26: Favor generic types.....	124
Item 27: Favor generic methods .....	129
Item 28: Use bounded wildcards to increase API flexibility .....	134
Item 29: Consider typesafe heterogeneous containers .....	142
<b>Enums and Annotations .....</b>	<b>147</b>
Item 30: Use enums instead of int constants.....	147
Item 31: Use instance fields instead of ordinals .....	158
Item 32: Use EnumSet instead of bit fields.....	159
Item 33: Use EnumMap instead of ordinal indexing.....	161
Item 34: Emulate extensible enums with interfaces .....	165
Item 35: Prefer annotations to naming patterns .....	169
Item 36: Consistently use the Override annotation.....	176
Item 37: Use marker interfaces to define types .....	179
<b>Methods .....</b>	<b>181</b>
Item 38: Check parameters for validity .....	181
Item 39: Make defensive copies when needed.....	184
Item 40: Design method signatures carefully .....	189
Item 41: Use overloading judiciously.....	191

Item 42: Use varargs judiciously .....	19
Item 43: Return empty arrays or collections, not nulls .....	20
Item 44: Write doc comments for all exposed API elements .....	20
<b>8 General Programming .....</b>	<b>209</b>
Item 45: Minimize the scope of local variables.....	209
Item 46: Prefer for-each loops to traditional for loops.....	211
Item 47: Know and use the libraries .....	211
Item 48: Avoid float and double if exact answers are required .....	213
Item 49: Prefer primitive types to boxed primitives .....	221
Item 50: Avoid strings where other types are more appropriate ..	224
Item 51: Beware the performance of string concatenation .....	227
Item 52: Refer to objects by their interfaces .....	229
Item 53: Prefer interfaces to reflection .....	230
Item 54: Use native methods judiciously.....	231
Item 55: Optimize judiciously .....	234
Item 56: Adhere to generally accepted naming conventions.....	237
<b>9 Exceptions .....</b>	<b>241</b>
Item 57: Use exceptions only for exceptional conditions .....	241
Item 58: Use checked exceptions for recoverable conditions and runtime exceptions for programming errors .....	244
Item 59: Avoid unnecessary use of checked exceptions .....	246
Item 60: Favor the use of standard exceptions.....	248
Item 61: Throw exceptions appropriate to the abstraction .....	250
Item 62: Document all exceptions thrown by each method.....	252
Item 63: Include failure-capture information in detail messages .....	254
Item 64: Strive for failure atomicity .....	256
Item 65: Don't ignore exceptions .....	258
<b>10 Concurrency .....</b>	<b>259</b>
Item 66: Synchronize access to shared mutable data.....	259
Item 67: Avoid excessive synchronization .....	265
Item 68: Prefer executors and tasks to threads.....	271
Item 69: Prefer concurrency utilities to wait and notify.....	273

Item 70: Document thread safety .....	278
Item 71: Use lazy initialization judiciously .....	282
Item 72: Don't depend on the thread scheduler .....	286
Item 73: Avoid thread groups .....	288
<b>11 Serialization .....</b>	<b>289</b>
Item 74: Implement <code>Serializable</code> judiciously.....	289
Item 75: Consider using a custom serialized form .....	295
Item 76: Write <code>readObject</code> methods defensively .....	302
Item 77: For instance control, prefer enum types to <code>readResolve</code> .....	308
Item 78: Consider serialization proxies instead of serialized instances .....	312
<b>Appendix: Items Corresponding to First Edition .....</b>	<b>317</b>
<b>References .....</b>	<b>321</b>
<b>Index .....</b>	<b>327</b>
