PREFACE	4
1 INTRODUCTION	9
2 SYSTEMS OF INTERACTING PARTICLES: BASIC CONSIDERATIONS	13
2.1 Simplifying assumptions and basic relations . . . . .	13
2.2 Pairwise additivity . . . . .	17
2.3 Classes of fluids . . . . .	19
2.4 Simple fluid interaction models . . . . .	22
2.5 Realistic potential models . . . . .	26
3 SYSTEMS OF INTERACTING PARTICLES: CORRELATION FUNCTIONS	30
3.1 Molecular correlation functions . . . . .	31
3.2 Partial correlation functions . . . . .	38
4 PSEUDOEXPERIMENTAL TECHNIQUES	41
4.1 Basics of molecular dynamics . . . . .	43
4.1.1 General remarks . . . . .	43
4.1.2 Verlet method . . . . .	45
4.1.3 Predictor-corrector algorithms . . . . .	46
4.1.4 Remarks and comments . . . . .	46
4.2 Basics of Monte Carlo method . . . . .	47
4.2.1 Naive versus smart sampling . . . . .	47
4.2.2 Metropolis algorithm . . . . .	49
5 BASIC THEORETICAL TOOLS	50
5.1 Functional differentiation . . . . .	50
5.2 Diagrammatic technique . . . . .	53
5.3 Integral equations . . . . .	61
5.4 Perturbation theories . . . . .	65
A APPENDIX: BASIC THERMODYNAMIC RELATIONS	69
