

# Content

Introduction .....	7
1 Soil field surveys .....	8
1.1 Terrain reconnaissance .....	8
1.2 Probe excavation.....	8
1.3 Field recording and soil profile descriptions .....	9
1.3.1 Diagnostic horizons and their thicknesses .....	10
1.3.2 Transition horizons and their characteristics .....	10
1.3.3 Soil colour .....	11
1.3.4 Soil structure .....	12
1.3.5 Soil texture and soil skeleton .....	14
1.3.6 Soil moisture .....	15
1.3.7 Consistence .....	15
1.3.8 New formations and concretions .....	16
1.3.9 Carbonates and soluble salts .....	18
1.4 Collecting soil samples.....	19
1.5 Sample preparation for laboratory analyses .....	20
2 Laboratory analyses.....	22
2.1 Particle-size analysis.....	22
2.1.1 Grain size analysis .....	23
2.1.1.1 Sieving method.....	23
2.1.1.2 Elutriation method.....	23
2.1.1.3 Pipette method.....	24
2.1.1.4 Areometric method (according to A. Cassagrande) .....	26
2.1.2 Soil skeleton analysis.....	29
2.1.3 Specific weight determinations.....	30
2.2 Analysing undisturbed soil samples .....	32
2.3 Soil moisture.....	34
2.3.1 Field capacity .....	34
2.3.2 Wilting point .....	36

2.3.3 Determining retention curves.....	37
2.3.3.1 Laboratory methods of determination .....	37
2.3.3.2 Field methods of determination.....	39
2.4 Soil reactions .....	41
2.4.1 Determining the active soil reaction (pH/H <sub>2</sub> O) .....	42
2.4.2 Determining exchangeable soil reactions (pH/KCl) .....	43
2.4.3 Determining hydrolytic soil reactions (H <sub>a</sub> ; mmol H <sup>+</sup> . 100 g soil).....	45
2.5 Determining carbonate contents .....	46
2.5.1 Qualitative determinations of carbonates.....	47
2.5.2 Qualitative determinations of carbonates by using the Janek Calcimeter .....	48
2.6 Soil organic matter.....	50
2.6.1 Quantitative humus content determinations.....	50
2.6.1.1 Dry-way methods of determination.....	50
2.6.1.2 Wet chemical methods of determination.....	51
2.6.2 Qualitative humus content determination .....	55
2.6.2.1 Spectrophotometric determination .....	55
2.6.3 Cellulase activity determin. on according to Christensen and modif. by Grunda ...	57
2.6.4 Soil enzyme activity determination.....	58
2.6.4.1 Determination of soil dehydrogenase activity.....	59
2.6.4.2 Determination of soil enzymes via direct incubation.....	59
2.7 Soil sorption, sorption complex.....	61
2.7.1 Cation exchange capacity.....	61
2.7.1.1 Methods of cation exchange capacity determination .....	62
2.7.1.2 Determination of cation exchange capacity according to Mehlich III .....	64
2.7.2 Anion exchange capacity .....	65
2.7.2.1 Determination of anion exchange capacity according to Mehlich.....	65
2.8 Iron in soil.....	67
2.8.1 Spectrophotometric determination of total iron content .....	67
2.8.2 Determination of free iron oxides .....	69
2.9 Aluminium in soil.....	70

2.9.1 Determination of exchangeable aluminium .....	70
2.9.2 Determination of total aluminium by means of bicarbonate fusion .....	71
2.9.3 Determination of extractable aluminium .....	72
2.9.4 Aluminium speciation via HPLC method.....	73
2.10 Heavy metals in soil .....	74
2.10.1 Extraction of heavy metals from soil via aqua-regia .....	74
2.10.2 Extraction of heavy metals from soil via nitric acid solution .....	75
2.10.3 Extract. of mobile forms via 0.05 M ethylenediamine-tetraacetic acid solution ...	76
3 References .....	77
4 Appendix .....	79
