

<b>I n t r o d u c t i o n .....</b>	<b>7</b>
Brief outline of several pathophysiological changes during the artificial heart implantation .....	7
A. Development of the substituting neurohumoral regulations .....	8
B. Alterations in hormonal levels and fluid milieu .....	12
C. Principal changes of parenchymous organs .....	15
D. Coagulation state.....	19
E. Pathophysiological status leading to termination of experiments .....	21
Aim of the paper .....	22
Extracorporeal heart lung system and artificial heart work .....	24
<b>M a t e r i a l .....</b>	<b>30</b>
<b>M e t h o d s .....</b>	<b>32</b>
<b>R e s u l t s .....</b>	<b>39</b>
A. Comparison of the two subgroups with the Soviet artificial heart implanted .....	39
I. Haemodynamics .....	41
II. Blood coagulation .....	45
III. Blood gases .....	47
IV. Serum ions and degradation substances .....	49
V. Blood pigment and blood cells .....	52
B. Several main characteristics of the Experiment No. 43 .....	56
C. Common functional explorations in the single experimental groups. Comparison of the results attained .....	61
I. Central venous pressure .....	61
Aortic pressure .....	63
Pulmonary artery pressure .....	64
Extracorporeal circuit blood flow .....	64
Right artificial ventricle output .....	65
Plasma free haemoglobin levels' .....	66
