Contents

1 ■ The Origins of Quantum Mechanics 1

1.1 Introduction 1

1.2 Blackbody Radiation 2

The Problem with Blackbody Radiation 2

1.3 The Nature of Light 10

The Photoelectric Effect 10

The Compton Effect 13

Is it a Particle or a Wave? 15

1.4 The Wave Nature of Matter 16

1.5 The Bohr Atom 17

1.6 Where do we Stand? 20

2 ■ Math Interlude A: Complex Numbers and Linear Operators 23

2.1 Complex Numbers 23

2.2 Operators 30

Definition of an Operator 30

Eigenfunctions and Eigenvalues 31

3 ■ The Schrödinger Equation 35

3.1 Derivation of the Schrödinger Equation 35

3.2 The Meaning of the Wave Function 44

3.3 The Time-Independent Schrödinger Equation 51

Derivation of the Time-Independent Schrödinger Equation . . . 51

Qualitative Solutions and the Origin of Quantization 53

4 ■ One-Dimensional Time-Independent Schrödinger Equation 63

4.1 Unbound States: Scattering and Tunneling 63

Scattering From Step-Function Potentials 68

4.2 Bound Systems 79
The Infinite Square Well 80
The Harmonic Oscillator Potential 83

5 ■ Math Interlude B: Linear Algebra 95

5.1 Properties of Linear Operators 95
5.2 Vector Spaces 100
Inner Products 101
Adjoint and Hermitian Operators 105
Basis Sets 107

6 ■ The Three-Dimensional Time-Independent Schrödinger Equation 113

6.1 Solution in Rectangular Coordinates 114
6.2 Angular Momentum 117
6.3 The Schrödinger Equation in Spherical Coordinates 125
6.4 The Hydrogen Atom 133

7 ■ Math Interlude C: Matrices, Dirac Notation, and the Dirac Delta Function 145

7.1 The Matrix Formulation of Linear Operators 145
7.2 Dirac Notation 151
7.3 The Dirac Delta Function 153

8 ■ Spin Angular Momentum 159

8.1 Spin Operators 159
8.2 Evidence for Spin 160
8.3 Adding Angular Momentum 164
8.4 The Matrix Representation of Spin 166
8.5 The Stern–Gerlach Experiment 173
8.6 Spin Precession 176
8.7 Spin Systems with Two Particles 180
Noninteracting Spins 180
Interacting Spins 183
8.8 Measurement Theory 186
Hidden Variables 188
The Many Worlds Interpretation of Quantum Mechanics 189

9 ■ Time-Independent Perturbation Theory 195

9.1 Derivation of Time-Independent Perturbation Theory 195

9.2 Perturbations to the Atomic Energy Levels 204
Fine Structure 205
The Lamb Shift 212
9.3 The Atom in External Electric or Magnetic Fields 214
The Atom in an Electric Field: The Stark Effect 214
The Atom in a Magnetic Field: The Zeeman Effect 216

10 ■ The Variational Principle 225
10.1 Variational Principle: Theory 225
10.2 Variational Principle: Application to the Helium Atom 230

11 ■ Time-Dependent Perturbation Theory 237
11.1 Derivation of Time-Dependent Perturbation Theory 237
11.2 Application: Selection Rules for Electromagnetic Radiation 247

12 ■ Scattering Theory 257
12.1 Definition of the Cross Section 257
12.2 The Born Approximation 262
12.3 Partial Waves 271

13 ■ The Multiparticle Schrödinger Equation 281
13.1 Wave Function for Identical Particles 281
13.2 Multielectron Atoms 293

14 ■ Some Modern Applications of Quantum Mechanics 303
14.1 Magnetic Resonance Imaging 303
14.2 Quantum Computing 308

15 ■ What Comes Next? Relativistic Quantum Mechanics 313
15.1 The Klein–Gordon Equation 313
Derivation of the Klein–Gordon Equation 313
Probability Densities and Currents 314
15.2 The Dirac Equation 317

Answers and Hints for Selected End-of-Chapter Exercises 325

Index 329
