

Table of content

Table of content.....	3
Preface	4
1. Main goals of the work	5
2. Literary review.....	6
3. Material and Methods	9
3.1. Evaluation of morphological properties.....	9
3.2. Build-up principle	12
3.3. Nesting of tracheid planes.....	14
3.3.1. Nesting relations	14
3.3.2. Evaluation of nesting procedure	16
3.4. Transformation of Intercellular spaces.....	17
3.4.1. Transformation of ICS as minimizing problem.....	17
3.4.1.1. Solution in sense of (27)	20
3.4.1.2. Solution in sense of (28)	21
3.4.1.3. General solution	21
3.4.1.4. Realization of minimization problem	22
3.4.2. Lateral neighbouring.....	22
4. Results and Discussion.....	25
4.1. Evaluation of pFE model	27
4.1.1. Appreciation of pFE models.....	27
4.2. PDE description of interaction between moisture, temperature, stress/strain and free water movement.....	31
4.3. Coupled physical problems	31
4.3.1. Effects of sub-macroscopic structure of wood in lumber drying process.....	31
4.3.1.1. Numerical solution.....	32
4.3.1.2. Evaluation of the models	33
4.3.2. Anisotropy properties of wood	35
4.3.2.1. Purposes of the model.....	35
4.3.2.2. Anisotropy of stress/strain relations.....	36
4.3.3. Study of correlation between the fractal dimension of wood anatomy structure and impact work.....	38
4.3.3.1. Evaluation of the fractal dimensions.....	38
4.3.3.2. Some interesting implications of implemented methods	39
4.3.4. Evaluation of fractal dimensions from bitmap image (description of application)	40
4.4. Superelements	41
5. Conclusions.....	42
6. References	45
7. List of author's publications according to topic of the report.....	52
