Contents

	Introduction	*page* vii
1	**Foundations**	1
1.1	Classical effective orbifolds	1
1.2	Examples	5
1.3	Comparing orbifolds to manifolds	10
1.4	Groupoids	15
1.5	Orbifolds as singular spaces	28
2	**Cohomology, bundles and morphisms**	32
2.1	De Rham and singular cohomology of orbifolds	32
2.2	The orbifold fundamental group and covering spaces	39
2.3	Orbifold vector bundles and principal bundles	44
2.4	Orbifold morphisms	47
2.5	Classification of orbifold morphisms	50
3	**Orbifold K-theory**	56
3.1	Introduction	56
3.2	Orbifolds, group actions, and Bredon cohomology	57
3.3	Orbifold bundles and equivariant K-theory	60
3.4	A decomposition for orbifold K-theory	63
3.5	Projective representations, twisted group algebras, and extensions	69
3.6	Twisted equivariant K-theory	72
3.7	Twisted orbifold K-theory and twisted Bredon cohomology	76

4 Chen–Ruan cohomology 78
4.1 Twisted sectors 80
4.2 Degree shifting and Poincaré pairing 84
4.3 Cup product 88
4.4 Some elementary examples 95
4.5 Chen–Ruan cohomology twisted by a discrete torsion 98

5 Calculating Chen–Ruan cohomology 105
5.1 Abelian orbifolds 105
5.2 Symmetric products 115
