

Contents

1	Introduction	1
1.1	What is a Model?	1
1.1.1	A Simple Example: Zooplankton Energy Balance	3
1.2	Why Do We Need Models?	5
1.2.1	Models as Analysing Tools	5
1.2.2	Models as Interpolation, Extrapolation, and Budgeting Tools	7
1.2.3	Models to Quantify Immeasurable Processes	9
1.2.4	Model Prediction as a Management Tool	10
1.3	Modelling Steps and Ingredients	10
1.4	The Modeller's Toolkit	13
2	Model Formulation	15
2.1	Conceptual Model	15
2.1.1	The Balance Equation of a State Variable	17
2.1.2	Example: Conceptual Model of a Lake Ecosystem	19
2.1.3	Conservation of Mass and Energy as a Consistency Check	21
2.1.4	Dimensional Homogeneity and Consistency of Units	23
2.2	Mathematical Formulations	24
2.3	Formulation of Chemical Reactions	25
2.3.1	The Law of Mass Action	25
2.3.2	Example: A Simple Chemical Reaction	26
2.4	Enzymatic Reactions	27
2.5	Basic Formulation of Ecological Interactions	28
2.5.1	Example: Flows to and from Phytoplankton in the Lake Ecosystem	28
2.5.2	Maximal Interaction Strength, Rate Limitation and Inhibition	31
2.5.3	One Rate-Limiting Resource, 3 Types of Functional Responses	35
2.5.4	More than One Limiting Resource	37
2.5.5	Inhibition Terms	38
2.6	Coupled Model Equations	40
2.6.1	Flows Modelled as Fractions of Other Flows	41

2.6.2	Coupled Dynamics of Source and Sink Compartments	42
2.6.3	Stoichiometry and Coupling of Element Cycles	43
2.7	Model Simplifications	44
2.7.1	Carrying Capacity Formulation	45
2.7.2	Closure Terms at the Highest Trophic Level	48
2.7.3	Simplification by Deletion of Intermediate Levels	48
2.8	Impact of Physical Conditions	49
2.8.1	Temperature	49
2.8.2	Light	50
2.8.3	Other Physical Impacts	53
2.9	Examples	54
2.9.1	NPZD, a Simple Ecosystem Model for Aquatic Environments	54
2.9.2	AQUAPHY, a Physiological Model of Unbalanced Algal Growth (**)	58
2.10	Case Studies in R	63
2.10.1	Making Sense Out of Mathematical Formulations	63
2.10.2	One Formula, Several Parameter Values	64
2.11	Projects	65
2.11.1	Conceptual Model: Lake Eutrophication	65
2.11.2	Model Formulation: Nutrient-Limited Batch Culture	66
2.11.3	Model Formulation: Detritus Degradation	67
2.11.4	Model Formulation: An Autocatalytic Reaction	69
3	Spatial Components and Transport	71
3.1	Microscopic and Macroscopic Models	72
3.2	Representing Space in Models	74
3.2.1	Spatial Dimensions	74
3.2.2	Discrete Spatial Models	74
3.2.3	Continuous Spatial Models	76
3.3	Transport in a Zero-Dimensional Model	77
3.4	Transport in a One-Dimensional Model	79
3.4.1	Flux Divergence	80
3.4.2	Macroscopic Formulation of Fluxes: Advection and Dispersion	82
3.4.3	The General 1-D Advection-Dispersion-Reaction Equation	84
3.4.4	The 1-D Advection-Dispersion-Reaction Equation in Estuaries, Rivers and Lakes	85
3.4.5	The 1-D Advection-Dispersion-Reaction Equation in Shapes with Different Symmetries	86
3.4.6	One-dimensional Diffusion in Porous Media (Sediments (**))	89
3.4.7	The 3-D Advection-Dispersion-Reaction Equation (*)	92
3.5	Boundary Conditions in Spatially Explicit Models	92
3.5.1	Boundary Conditions in Discrete Models	94
3.5.2	Boundary Conditions in Continuous Models	95
3.5.3	Boundary Conditions in Multi-layered Models (**)	98

3.6	Case Studies in R	102
3.6.1	An Autocatalytic Reaction in a Flow-Through Stirred Tank	102
3.6.2	A 1-D Microscopic and Macroscopic Model of Diffusion	103
3.6.3	Cellular Automaton Model of Diffusion (**)	107
3.6.4	Competition in a Lattice Grid	110
3.6.5	Transport and Reaction in Porous Media: Silicate Diagenesis	114
4	Parameterization	117
4.1	In Situ Measurement	117
4.2	Literature-Derived Parameters	118
4.3	Calibration	119
4.3.1	Linear Regression	120
4.3.2	Nonlinear Fitting	122
4.4	Case Studies in R	123
4.4.1	Nonlinear Parameter Estimation: P-I Curve	123
4.4.2	Linear Versus Non-Linear Parameter Estimation: Sediment Bioturbation	125
4.4.3	Pseudo-Random Search, a Random-Based Minimization Routine	128
4.4.4	Calibration of a Simple Model	132
5	Model Solution – Analytical Methods	139
5.1	An Everyday Life Example	139
5.2	Finding an Analytical Solution	140
5.3	Examples	141
5.3.1	A Very Simple First-Order Differential Equation	141
5.3.2	The Logistic Equation	143
5.3.3	A Second-Order Differential Equation: Carbon Dynamics in Sediments (*)	144
5.3.4	Coupled BOD and Oxygen Equations (*)	146
5.3.5	Multilayer Differential Equations (**)	147
5.4	Case Studies in R	150
5.4.1	Transient Dispersion-Reaction in One Dimension	150
5.4.2	Transient Diffusion-Reaction on a 2-Dimensional Surface	151
5.4.3	Steady-State Oxygen Budget in Small Organisms Living in Suboxic Conditions	152
5.4.4	Analytical Solution of the Non-Local Exchange Sediment Model (***)	158
5.5	Projects	161
5.5.1	Organic Matter Sinking Through a Water Column	161
5.5.2	Oxygen Dynamics in the Sediment	162
5.5.3	Carbon Dynamics in the Sediment	164

6	Model Solution – Numerical Methods	165
6.1	Taylor Expansion	165
6.2	Numerical Approximation and Numerical Errors	167
6.3	Numerical Integration in Time – Basics	169
6.3.1	Euler Integration	170
6.3.2	Criteria for Numerical Integration	171
6.3.3	Interpolation Methods – 4th Order Runge-Kutta (**)	173
6.3.4	Flexible Time Step Methods – 5th Order Runge-Kutta (**)	174
6.3.5	Implicit and Semi-Implicit Integration Routines (**)	174
6.3.6	Which Integrator to Choose?	175
6.4	Approximating Spatial Derivatives (*)	176
6.4.1	Approximating the Flux Divergence Equation	176
6.4.2	Approximating Dispersion	177
6.4.3	Approximating Advection	178
6.4.4	The Boundaries with the External World	179
6.5	Numerical Dispersion (***)	180
6.5.1	Example: Sediment Model	182
6.6	Case Studies in R	183
6.6.1	Implementing the Enzymatic Reaction Model	184
6.6.2	Growth of a Daphnia Individual	188
6.6.3	Zero-Dimensional Estuarine Zooplankton Model	195
6.6.4	Aphids on a Row of Plants: Numerical Solution of a Dispersion-Reaction Model	197
6.6.5	Fate of Marine Zooplankton in an Estuary (***)	200
6.7	Projects	206
6.7.1	Numerical Solution of the Autocatalytic Reaction in a Flow-Through Stirred Tank	206
6.7.2	Numerical Solution of a Nutrient-Algae Chemostat Model – Euler Integration	207
6.7.3	Rain of Organic Matter in the Ocean: Numerical Solution of the Advection-Reaction Model	209
6.7.4	AQUAPHY Model Implementation	209
7	Stability and Steady-State	211
7.1	Basics	211
7.2	Stability of One First-Order Differential Equation	213
7.2.1	Equilibrium Points, Stability, Domain of Attraction	213
7.2.2	Multiple Steady States	215
7.2.3	Bifurcation	216
7.3	Stability of Two Differential Equations – Phase-Plane Analysis	218
7.3.1	Example. The Lotka-Volterra Predator-Prey Equation	220
7.4	Multiple Equations	224
7.5	Steady-State Solution of Differential Equations (*)	224
7.5.1	Direct Root Finding: Analytical Solution	225
7.5.2	Iterative Root Finding	225

7.5.3	From Partial to Ordinary Differential Equations	225
7.6	Formal Analysis of Stability (**)	226
7.7	Limit Cycles (***)	231
7.8	Case Studies in R	232
7.8.1	Multiple Stable States: the Spruce Budworm Model	232
7.8.2	Phase-Plane Analysis: The Lotka-Volterra Competition Equations	237
7.8.3	The Lorenz Equations – Chaos	242
7.8.4	Steady-State Solution of the Silicate Diagenetic Model (**)	243
7.8.5	Fate of Marine Zooplankton in an Estuary – Equilibrium Condition (**)	248
7.9	Projects	250
7.9.1	The Schaefer Model of Fisheries	250
7.9.2	A Fisheries Model with Allee Effect	252
7.9.3	Ecological-Economical Fisheries Model	253
7.9.4	Predator-Prey System with Type-II Functional Response	254
7.9.5	Succession of Nutrients, Phytoplankton and Zooplankton in a River	254
8	Multiple Time Scales and Equilibrium Processes	257
8.1	Simple Chemical Equilibrium Calculation: Ammonia and Ammonium	258
8.2	Chemical Equilibrium Combined with a Slow Reaction Process	259
8.3	General Approach to Equilibrium Reformulation	261
8.3.1	Enzymatic Equilibrium in a Slow Reaction Process: The Michaelis-Menten Equation (**)	261
8.3.2	Equilibrium Adsorption in Porous Media (**)	264
8.4	Examples in R	267
8.4.1	Solving pH in Aquatic Systems	267
8.4.2	A Model of pH Changes Due to Algal Growth (**)	269
9	Discrete Time Models	273
9.1	Difference Equations	274
9.2	Discrete Logistic Models	275
9.3	Host-Parasitoid Interactions	276
9.4	Dynamic Matrix Models	278
9.4.1	Example: Age Structured Population Model	278
9.4.2	Matrix Notation	280
9.4.3	Stable Age Distribution and Rate of Increase	281
9.4.4	The Reproductive Value	282
9.5	Case Studies in R	283
9.5.1	Bifurcations in the Discrete Logistic Model	283
9.5.2	Bifurcations in the Host-Parasitoid Model	283
9.5.3	Attractors in the Host-Parasitoid Model	285
9.5.4	Population Dynamics of Teasel	287

9.6	Projects	292
9.6.1	Bifurcation of the Logistic Map	292
9.6.2	Equilibrium Dynamics of a Simple Age-Class Matrix Model	292
9.6.3	Equilibrium Dynamics of a US Population	292
10	Dynamic Programming	295
10.1	Sequential Decisions	296
10.2	Finding the Optimal Solution	296
10.3	A Simple Example	297
10.4	Case Study in R: The Patch-Selection Model	301
11	Testing and Validating the Model	309
11.1	Coupled BOD-O ₂ Model Revisited	309
11.2	Testing the Correctness of the Model Solution	310
11.3	Testing the Internal Logic of the Model	312
11.4	Model Verification and Validity	313
11.5	Model Sensitivity	314
11.6	Case Studies in R	315
11.6.1	Time-Varying Oxygen Consumption in a Small Cylindrical Organism	315
11.6.2	R for Validation and Verification	319
11.6.3	Univariate Local Sensitivity Analysis	319
11.6.4	Bivariate Local Sensitivity Analysis	325
12	Further Reading and References	329
12.1	Model Formulations	329
12.2	Spatial Pattern	330
12.3	Parameterization	331
12.4	Model Solution	331
12.5	Stability and Equilibrium Analysis	332
12.6	Discrete Time and Dynamic Programming Models	332
Appendix A	About R	335
A.1	Installing R	335
A.2	A Very Short Introduction	336
A.2.1	Console Versus Scripts	336
A.2.2	Getting Help	337
A.2.3	Vectors and Matrices	337
A.2.4	More Complex Data Structures	339
A.2.5	User-defined Functions and Programming	340
A.2.6	R Packages	341
A.2.7	Graphics	341
A.2.8	Minor Things to Remember	342
A.3	Interfacing R with Low-Level Languages: The Competition in a Lattice Grid Model Revisited	343

Appendix B Derivatives and Differential Equations	347
B.1 Derivatives	347
B.2 Taxonomy of Differential Equations	348
B.3 General Solutions of Often Used Differential Equations	349
B.3.1 Simple Time-Dependent Equations	349
B.3.2 Steady-State Transport – Reaction in 1-D, Constant Surface	350
B.3.3 Steady-State Transport – Reaction in 1-D, Cylindrical Coordinates	350
B.3.4 Steady-State Transport – Reaction in 1-D, Spherical Coordinates	351
B.4 Particular Solutions of Dynamic Diffusion-Reaction Equation	351
B.5 Derivatives and Integrals	352
Appendix C Matrix Algebra	353
C.1 Matrices	353
C.2 Linear Equations	354
C.3 Eigenvalues and Eigenvectors, Determinants	355
C.4 R-Examples	355
C.5 The Jacobian Matrix	357
Appendix D Statistical Distributions	359
D.1 Probability Distribution	359
D.2 Normal Distribution	359
D.3 The Poisson Distribution	360
References	361
