

TABLE OF CONTENTS

PREFACE TO THE SECOND EDITION	V
CHAPTER 1. INTRODUCTION	1
CHAPTER 2. DEFINITIONS AND MATHEMATICAL PRELIMINARIES	6
2.1 Complex value representation of real polychromatic fields	6
2.2 Correlation functions and their properties	8
2.3 Elementary ideas of temporal and spatial coherence	16
2.4 Quasi-monochromatic approximation	22
CHAPTER 3. SECOND-ORDER COHERENCE	24
3.1 Interference law for two partially coherent beams	24
3.2 Propagation laws of partial coherence	28
3.3 Van Cittert-Zernike theorem	33
CHAPTER 4. GENERAL PROPERTIES OF THE SECOND-ORDER COHERENCE	38
4.1 Mutual coherence function for incoherent radiation	38
4.2 Properties of coherent radiation	39
4.3 Concept of cross-spectral purity of light	43
4.4 Determination of the spectrum from the visibility of interference fringes – phase problem of coherence theory	46
4.5 Radiation from partially coherent planar sources and radiometry with light of any state of coherence	54
CHAPTER 5. MATRIX DESCRIPTION OF PARTIAL COHERENCE	59
5.1 Sampling theorem	59
5.2 Interference law in matrix form	61
5.3 Intensity matrix and its properties	62
5.4 Propagation law of partial coherence in matrix form	67
5.5 The entropy of light beams	68
5.6 Generally covariant formulation of partial coherence	69

CHAPTER 6. POLARIZATION PROPERTIES OF LIGHT	71
6.1 Definitions of coherence matrix and Stokes parameters	71
6.2 Matrix description of non-image-forming optical elements	74
6.3 Interference law for partially polarized beams	77
6.4 Unpolarized and polarized light	78
6.5 Degree of polarization	80
6.6 Probability interpretation of the eigenvalues of the coherence matrix	81
6.7 Operational definition of coherence matrix and Stokes parameters	81
6.8 Analogy of coherence matrix and density matrix	82
CHAPTER 7. FIELD EQUATIONS AND CONSERVATION LAWS FOR CORRELATION TENSORS	83
7.1 Definition of correlation tensors and their properties	83
7.2 Dynamical equations for correlation tensors	86
7.3 Second-order equations — wave equations — for correlation tensors	87
7.4 Conservation laws for correlation tensors	88
7.5 Stationary fields	90
7.6 Cross-spectral tensors	91
7.7 Non-negative definiteness conditions for correlation tensors and cross-spectral tensors	92
CHAPTER 8. GENERAL CLASSICAL STATISTICAL DESCRIPTION OF THE FIELD	94
8.1 Stochastic description of light	94
8.2 Functional formulation	96
CHAPTER 9. SOME APPLICATIONS OF THE THEORY OF COHERENCE TO OPTICAL IMAGING	97
9.1 Spatial Fourier analysis of optical imaging — transfer functions for partially coherent light	97
9.2 Reconstruction of an object from its image and similarity between object and image	105
CHAPTER 10. FOURTH- AND HIGHER-ORDER COHERENCE PHENOMENA — SEMI-CLASSICAL TREATMENT	113
10.1 Photocount distribution	114
10.2 Determination of the integrated intensity distribution from the photocount distribution	119
10.3 Short-time measurements	121
10.4 Bunching effect of photons	125

10.5	Hanbury Brown-Twiss effect — correlation interferometry and spectroscopy of the fourth order	128
10.6	Higher-order coherence effects	134
CHAPTER 11. BASIC IDEAS OF THE QUANTUM THEORY OF THE ELECTRO-MAGNETIC FIELD		136
11.1	Quantum description of the field	137
11.2	Statistical states	141
11.3	Multimode description	142
11.4	Calculation of commutators of the field operators	143
11.5	Time development in quantum electrodynamics	144
CHAPTER 12. OPTICAL CORRELATION PHENOMENA		147
12.1	Quantum correlation functions	147
12.2	Quantum coherence	151
12.3	Quantum characteristic functional	157
12.4	Measurements for mixed-order correlation functions	157
CHAPTER 13. COHERENT-STATE DESCRIPTION OF THE ELECTROMAGNETIC FIELD		160
13.1	Coherent states of the electromagnetic field	160
13.2	Glauber-Sudarshan representation of the density matrix	169
13.3	The existence of the Glauber-Sudarshan quasi-probability	178
13.4	Multimode description	186
13.5	More general classes of coherent states	187
CHAPTER 14. RELATION BETWEEN QUANTUM AND CLASSICAL DESCRIPTIONS OF COHERENCE		189
14.1	Quantum and classical correlation functions	189
14.2	Photon-number and photocount distributions	190
CHAPTER 15. STATIONARY CONDITIONS OF THE FIELD		196
15.1	Time invariance properties of the correlation functions	196
15.2	Stationary conditions in phase space	197
CHAPTER 16. ORDERING OF FIELD OPERATORS IN QUANTUM OPTICS		200
16.1	Definition of Ω -ordering and general decompositions of operators	201
16.2	Connecting relations for different orderings	207
16.3	Multimode description	210
16.4	Measurements corresponding to antinormally ordered correlation functions — quantum counters	217

CHAPTER 17. SPECIAL STATES OF THE ELECTROMAGNETIC FIELD	221
17.1 Chaotic (Gaussian) radiation	221
17.2 Laser radiation	231
17.3 Superposition of coherent and chaotic fields	243
CHAPTER 18. INTERFERENCE OF INDEPENDENT LIGHT BEAMS	258
CHAPTER 19. REVIEW OF NONLINEAR OPTICAL PHENOMENA	262
19.1 General classical description	262
19.2 Second-order phenomena	263
19.3 Third- and higher-order phenomena	266
19.4 Transient coherent optical effects	269
CHAPTER 20. HEISENBERG-LANGEVIN AND FOKKER-PLANCK APPROACHES TO THE STATISTICAL PROPERTIES OF RADIATION INTERACTING WITH MATTER	272
20.1 The Heisenberg-Langevin approach	272
20.2 The master equation and the generalized Fokker-Planck equation	277
20.3 The interaction of radiation with a nonlinear medium	278
CHAPTER 21. QUANTUM STATISTICS OF RADIATION IN RANDOM MEDIA	282
21.1 The Hamiltonian for radiation in interaction with a random medium	282
21.2 Heisenberg-Langevin equations and the generalized Fokker-Planck equation	284
21.3 Solutions of the Heisenberg-Langevin equations and the generalized Fokker-Planck equation	285
21.4 Photocount statistics	288
21.5 Speckle phenomenon	294
CHAPTER 22. QUANTUM STATISTICS OF RADIATION IN NONLINEAR MEDIA	295
22.1 Optical parametric processes with classical pumping	295
22.2 Interaction of three single-mode boson quantum fields	302
22.3 Second and higher harmonic and subharmonic generation	307
22.4 Raman scattering	309
22.5 Multiphoton absorption and emission	316
22.6 Resonance fluorescence	318
CHAPTER 23. CONCLUSIONS	322
REFERENCES	324
INDEX	346
