

# Table of contents

<b>Executive summary</b> . . . . .	<b>1</b>
1. Introduction . . . . .	1
2. Energy as an enabler of universal access to health care . . . . .	2
3. Energy requirements in health facilities: a closer look . . . . .	3
4. Electricity supply in health facilities: trends and opportunities . . . . .	4
5. Improving measurement of electricity access in health facilities . . . . .	8
6. A 'multi-tier metric' to track electricity access in health facilities . . . . .	8
7. Next steps and conclusions . . . . .	9
<b>1. Introduction</b> . . . . .	<b>11</b>
<b>2. Energy as an enabler of universal access to health care</b> . . . . .	<b>15</b>
Current status of electricity access in health facilities: available data . . . . .	16
Research into links between energy access and health services provision . . . . .	18
<b>3. Energy requirements in health facilities: a closer look</b> . . . . .	<b>21</b>
Classification of health facilities . . . . .	21
Electrical equipment required for health services: devices, appliances and infrastructure . . . . .	22
Improving energy efficiency of medical devices and appliances . . . . .	25
Thermal energy needs of health facilities . . . . .	26
<b>4. Electricity supply in health facilities: trends and opportunities</b> . . . . .	<b>31</b>
Grid-based electricity supply and on-site electricity production . . . . .	31
The increasing role of solar power in health facilities . . . . .	32
High capital cost barriers to solar energy solutions . . . . .	36
Optimizing energy demand and supply to limit costs, pollution and emissions . . . . .	37
CHP and other on-site energy systems for larger hospitals . . . . .	39
Health facilities as energy providers . . . . .	41
A proposed framework for energy and health service linkages . . . . .	42

<b>5. Improving measurement of electricity access in health facilities</b> . . . . .	<b>45</b>
Needs and benefits of a monitoring metric . . . . .	45
Attributes of electricity supply . . . . .	46
Enhanced health clinic surveys and data collection tools . . . . .	50
<b>6. A 'multi-tier metric' for electricity access</b> . . . . .	<b>53</b>
Electricity access tier ratings for health facilities . . . . .	54
Electricity access index: aggregation of tiers into a single value. . . . .	57
Disaggregated data analysis . . . . .	58
Limitations of the proposed methodology . . . . .	59
Assessing supply in relation to demand: the 'electricity access gap' . . . . .	59
<b>7. Way forward.</b> . . . . .	<b>63</b>
Next steps . . . . .	63
Conclusions . . . . .	66
<b>Annex 1: A proposed SARA energy module: sample survey questions for multi-tier measurement</b> . . . . .	<b>67</b>
<b>Annex 2: Compendium of existing health services surveys.</b> . . . . .	<b>73</b>
<b>Annex 3: Categorization of health care facilities.</b> . . . . .	<b>79</b>
<b>Annex 4: Comparing Costs and Emissions of Alternative Energy Strategies in a Scenario Using Conventional Medical Devices and Energy-Efficient Devices.</b> . . . . .	<b>80</b>
<b>Annex 5: Links to sources of values on indicative electricity demand for appliances and devices.</b> . . . . .	<b>93</b>
<b>References</b> . . . . .	<b>97</b>
