<b>Acknowledgements</b>	v
<b>Foreword</b>	vii
<b>Executive summary</b>	ix
<b>Background</b>	x
Road traffic injuries are a leading cause of preventable death	x
The economic burden of road traffic injury and death	xi
The Decade of Action for Road Safety: a response to the road traffic injury epidemic	xi
Global Status Report on Road Safety 2015: objectives	xi
Methodology	xii
<b>SECTION 1: The current state of global road safety</b>	1
The number of road traffic deaths has plateaued since 2007	2
Low- and middle-income countries bear a disproportionate burden of road traffic deaths	4
The risk of dying in a road crash remains highest in low- and middle-income countries	5
The risk of a road traffic death is highest in the African Region	6
Road traffic deaths among pedestrians, cyclists and motorcyclists are intolerably high	8
More attention must be given to the needs of pedestrians and cyclists	9
Motorcyclist safety must be prioritized too	9
Greater progress on harmonizing data on road traffic deaths is needed	11
Data on road traffic fatalities are not robust in many countries	11
Lack of emergency care creates injury outcome disparities	12
Quality of care at scene of crash	13
Health-care staff must be trained in emergency care	13
Multisectoral action is essential for effective national road safety strategies	14
<b>SECTION 2: Legislation and road user behaviour</b>	17
Many countries need to strengthen road safety legislation	18
Enforcement is vital to the success of road safety laws	18
<b>Reducing speed</b>	21
Speed is a critical risk factor for road traffic injuries	21
Ease of mobility must not be at the expense of safety	21
National speed limits are crucial for effective speed management	21
Local authorities need legislative power to reduce national speed limits where necessary	22
<b>Increasing motorcycle helmet use</b>	25
Preventing motorcyclist head injuries is becoming increasingly urgent as motorcycle use rises	25
Helmet laws should cover all riders and specify a helmet quality standard	25
Helmets must be of good quality to be effective	26
Few countries meet best practice when it comes to helmet laws and helmet standards	26
Children legally allowed as motorcycle passengers must be required to wear a helmet	27
More effort is needed to collect data on helmet-wearing rates	28
Other promising strategies that protect motorcyclists	28

<b>Reducing drink-driving</b>	30
Laws based on blood alcohol concentration (BAC) limits can reduce road traffic crashes	30
Young and novice drivers at increased risk	30
Commercial drivers involved in drink-driving have more serious outcomes	32
Enforcement of drink-driving legislation is critical to its effectiveness	32
Other effective strategies to reduce drink-driving	32
More work is needed collecting data on drink-driving	33
<b>Increasing seat-belt use</b>	34
Just over half of all countries have enacted good seat-belt laws	34
Almost half of all countries collect seat-belt wearing data	35
<b>Increasing child restraint use</b>	36
Protecting children requires properly fitting restraints	36
Compliance with child restraint laws is low	37
<b>Reducing drug-driving</b>	40
Drug-driving is an emerging road safety issue	40
The difficulties of addressing drug-driving	40
Countries are enacting drug-driving legislation based on evolving evidence	41
Training police to recognize and test for drug-driving	42
<b>Reducing distracted driving</b>	43
Distracted driving is a serious and growing threat to road safety	43
Four-fold increase in crash risk when talking on a mobile phone while driving	43
Evidence on effective ways to reduce mobile phone use while driving is still evolving	43
<b>SECTION 3: Safer vehicles and roads</b>	45
<hr/>	
Most countries fail to apply minimum UN safety standards to new cars	46
Standards protecting occupants in front and side impact crashes are poorly implemented	47
Electronic stability control is highly effective and should be mandatory in all vehicles	47
Vehicles can be built to better protect pedestrians	48
Vehicle standards and fixtures are crucial to improving seat-belt and child restraint use	49
Making roads safer	50
High-performing countries explore how to make transport more sustainable	50
Safe road systems consider the needs of all road users	51
Safety through design	52
<b>Conclusions and recommendations</b>	55
<hr/>	
Looking ahead: the SDG target to halve road deaths by 2020	56
