

Contents

1. Introduction	1
1.1 The Role of Astronomy	1
1.2 Astronomical Objects of Research	2
1.3 The Scale of the Universe	4
2. Spherical Astronomy	9
2.1 Spherical Trigonometry	9
2.2 The Earth	13
2.3 The Celestial Sphere	15
2.4 The Horizontal System	15
2.5 The Equatorial System	17
2.6 The Ecliptic System	22
2.7 The Galactic Coordinates	23
2.8 Perturbations of Coordinates	23
2.9 Constellations	28
2.10 Star Catalogues and Maps	29
2.11 Positional Astronomy	32
2.12 Time Reckoning	36
2.13 Astronomical Time Systems	39
2.14 Calendars	39
2.15 Exercises	42
3. Observations and Instruments	47
3.1 Observing Through the Atmosphere	47
3.2 Optical Telescopes	50
3.3 Detectors	64
3.4 Radio Telescopes	69
3.5 Other Wavelength Regions	76
3.6 Instruments of the Future	81
3.7 Other Forms of Energy	83
3.8 Exercises	85
4. Photometric Concepts and Magnitudes	87
4.1 Intensity, Flux Density and Luminosity	87
4.2 Apparent Magnitudes	91
4.3 Magnitude Systems	92
4.4 Absolute Magnitudes	94
4.5 Extinction and Optical Thickness	95
4.6 Exercises	98
5. Radiation Mechanisms	103
5.1 Radiation of Atoms and Molecules	103

5.2	The Hydrogen Atom	105
5.3-5	Quantum Numbers, Selection Rules, Population Numbers	109
5.4	Molecular Spectra	110
5.5	Continuous Spectra	110
5.6	Blackbody Radiation	111
5.7	Other Radiation Mechanisms	115
5.8	Radiative Transfer	116
5.9	Exercises	118
6.	Temperatures	119
6.1	Exercises	122
7.	Celestial Mechanics	123
7.1	Equations of Motion	123
7.2	Solution of the Equation of Motion	124
7.3	Equation of the Orbit and Kepler's First Law	128
7.4	Orbital Elements	129
7.5	Kepler's Second and Third Law	131
7.6	Orbit Determination	134
7.7	Position in the Orbit	134
7.8	Escape Velocity	136
7.9	Virial Theorem	138
7.10	The Jeans Limit	140
7.11	Exercises	142
8.	The Solar System	147
8.1	An Overview	147
8.2	Planetary Configurations	148
8.3	Orbit of the Earth	150
8.4	Orbit of the Moon	152
8.5	Eclipses and Occultations	154
8.6	Albedos	156
8.7	Planetary Photometry, Polarimetry and Spectroscopy	158
8.8	Thermal Radiation of the Planets	162
8.9	The Structure of Planets	164
8.10	Planetary Surfaces	166
8.11	Atmospheres and Magnetospheres	168
8.12	Mercury	172
8.13	Venus	174
8.14	The Earth and the Moon	177
8.15	Mars	183
8.16	Asteroids	187
8.17	Jupiter	189
8.18	Saturn	194
8.19	Uranus, Neptune and Pluto	197
8.20	Minor Bodies of the Solar System	202
8.21	Cosmogony	205
8.22	Other Solar Systems	209
8.23	Exercises	210

9. Stellar Spectra	215
9.1 Measuring Spectra	215
9.2 The Harvard Spectral Classification	218
9.3 The Yerkes Spectral Classification	221
9.4 Peculiar Spectra	223
9.5 The Hertzsprung-Russell Diagram	224
9.6 Model Atmospheres	226
9.7 What Do the Observations Tell Us?	227
10. Binary Stars and Stellar Masses	231
10.1 Visual Binaries	232
10.2 Astrometric Binary Stars	233
10.3 Spectroscopic Binaries	233
10.4 Photometric Binary Stars	235
10.5 Exercises	237
11. Stellar Structure	241
11.1 Internal Equilibrium Conditions	241
11.2 Physical State of the Gas	245
11.3 Stellar Energy Sources	249
11.4 Stellar Models	254
11.5 Exercises	255
12. Stellar Evolution	259
12.1 Evolutionary Time Scales	259
12.2 The Contraction of Stars Towards the Main Sequence	260
12.3 The Main Sequence Phase	262
12.4 The Giant Phase	265
12.5 The Final Stages of Evolution	267
12.6 The Evolution of Close Binary Stars	270
12.7 Comparison with Observations	272
12.8 The Origin of the Elements	273
13. The Sun	277
13.1 Internal Structure	277
13.2 The Atmosphere	279
13.3 Solar Activity	283
14. Variable Stars	291
14.1 Classification	292
14.2 Pulsating Variables	293
14.3 Eruptive Variables	296
14.4 Exercises	303
15. Compact Stars	305
15.1 White Dwarfs	305
15.2 Neutron Stars	306
15.3 Black Holes	312

16. The Interstellar Medium	317
16.1 Interstellar Dust	317
16.2 Interstellar Gas	329
16.3 Interstellar Molecules	337
16.4 The Formation of Protostars	341
16.5 Planetary Nebulae	342
16.6 Supernova Remnants	343
16.7 The Hot Corona of the Milky Way	346
16.8 Cosmic Rays and the Interstellar Magnetic Field	347
17. Star Clusters and Associations	349
17.1 Associations	350
17.2 Open Star Clusters	351
17.3 Globular Star Clusters	354
18. The Milky Way	357
18.1 Methods of Distance Measurement	359
18.2 Stellar Statistics	362
18.3 The Rotation of the Milky Way	367
18.4 The Structure and Evolution of the Milky Way	374
18.5 Exercises	377
19. Galaxies	379
19.1 The Classification of Galaxies	379
19.2 Elliptical Galaxies	381
19.3 Spiral Galaxies	388
19.4 Lenticular Galaxies	392
19.5 Luminosities of Galaxies	392
19.6 Masses of Galaxies	393
19.7 Systems of Galaxies	395
19.8 Distances of Galaxies	398
19.9 Active Galaxies and Quasars	398
19.10 The Origin and Evolution of Galaxies	403
20. Cosmology	405
20.1 Cosmological Observations	405
20.2 The Cosmological Principle	412
20.3 Homogeneous and Isotropic Universes	414
20.4 The Friedmann Models	416
20.5 Cosmological Tests	421
20.6 History of the Universe	423
20.7 The Future of the Universe	426
Appendices	429
A. Mathematics	429
A.1 Geometry	429
A.2 Taylor Series	429
A.3 Vector Calculus	431
A.4 Conic Sections	433

A.5	Multiple Integrals	434
A.6	Numerical Solution of an Equation	435
B.	Quantum Mechanics	437
B.1	Quantum Mechanical Model of Atoms. Quantum Numbers	437
B.2	Selection Rules and Transition Probabilities	438
B.3	Heisenberg's Uncertainty Principle	438
B.4	Exclusion Principle	439
C.	Theory of Relativity	439
C.1	Basic Concepts	439
C.2	Lorentz Transformation. Minkowski Space	441
C.3	General Relativity	442
C.4	Tests of General Relativity	443
D.	Radio Astronomy Fundamentals	444
D.1	Antenna Definitions	444
D.2	Antenna Temperature and Flux Density	446
E.	Tables	447
	Further Reading	465
	Photograph Credits	469
	Subject Index	471
