

DIRECTORY OF NOTEBOOK FIGURES

TO ACCOMPANY ZUBAY

PRINCIPLES OF BIOCHEMISTRY

Chapter 1

Generalized Representation of an Animal Cell Figure 1.1a
Generalized Representation of a Plant Cell Figure 1.1b
Structural Components of Nucleic Acids Figure 1.6
Graphic Representation of a Three-Dimensional Model of Cytochrome c Figure 1.12
Right-Handed Helical Structure of DNA Figure 1.13
Structure of the Complex Formed Between Lysozyme and Its Substrate Figure 1.15

Chapter 2

Entropy of Binding of Gas Molecules to a Solid Catalyst Figure 2.5
Formation of Glucose-6-Phosphate (G-6-P) Has a Positive ΔG° Figure 2.6

Chapter 3

Titration Curve of Alanine Figure 3.3
Titration Curves of Glutamic Acid, Lysine, and Histidine Figure 3.4
Steps Involved in the Sequence Determination of the β Chain of Insulin Figure 3.16

Chapter 4

Basic Dimensions of a Dipeptide Figure 4.2
Three Ways of Projecting the α -Helix Figure 4.4
Coiling of α Helices in α -Keratins Figure 4.6
Antiparallel β Sheet Figure 4.8
Three-Dimensional Architecture of Silk Figure 4.9
Basic Coiled-Coil Structure of Collagen Figure 4.13
Hierarchies of Protein Structures Figure 4.14

Chapter 5

Equilibrium Curves Measure the Affinity for Oxygen of Hemoglobin Figure 5.2 17
Transport of Oxygen (O_2) and Carbon Dioxide (CO_2) in the Circulatory System Figure 5.5 17
Deoxy-to-Oxy Shift Upon Binding Oxygen in One Hemoglobin Molecule Figure 5.7 18
Positions of Mutations in Hemoglobin That Produce a Pathological Condition Figure 5.13 19
Hierarchy of Muscle Organization Figure 5.15 20
Steps in the Contraction Process Figure 5.19 21

Chapter 6

Polydextran Column Showing Separation of Small and Large Molecules Figure 6.4 22
Gel Electrophoresis for Analyzing and Sizing Proteins Figure 6.5 22
Outline of Purification Scheme for UMP Synthase from Ehrlich Ascites Tumor Cells of Mice Figure 6.8 23

Chapter 7

Six Main Classes of Enzymes and the Reactions They Catalyze Figure 7.1 24
Kinetics of a First-Order Reaction in Which a Single Reactant (R) Is Converted Irreversibly to a Product (P) Figure 7.2 24
Types of Enzyme Inhibition Figure 7.14 25

Chapter 8

Trypsin, Chymotrypsin, and Elastase Catalyze the Hydrolysis of Proteins Figure 8.4 26
Schematic Diagrams of the Amino Acid Sequences of Chymotrypsin, Trypsin, and Elastase Figure 8.5 27

p-Nitrophenol Formation as a Function of Time During the Hydrolysis of p-Nitrophenyl Acetate by Chymotrypsin Figure 8.8	
Steps in the Hydrolysis of p-Nitrophenyl Acetate by Chymotrypsin Figure 8.9	
Probable Mechanism of Action of Chymotrypsin Figure 8.11	
Chapter 9	
Interface Between Subunits A and D of Phosphofructokinase Near the Catalytic Site Figure 9.11	
Hydrogen Bonds of the Peptide Backbone and the Side Chain of Threonine 245 at the Interface Between Subunits A and D of Phosphofructokinase Figure 9.12	
Chapter 11	
Organization of Functionally Related Enzymes Figure 11.3	
Schematic Block Diagram of the Metabolism of a Typical Aerobic Heterotroph Figure 11.4	
Overall Metabolism of an Aerobic Heterotroph, Represented as Three Concentric Boxes Figure 11.5	
Interconversion of Fructose-6-Phosphate and Fructose-1,6-Bisphosphate Figure 11.6	
Chapter 12	
Energetically Favored Conformations of $\beta(1,4)$ -Linked D-Glucose Figure 12.11	
Glycolytic Pathway from Glucose to Pyruvate, Indicating Two Anaerobic Options (Ethanol or Lactate) and One Aerobic Option (TCA Cycle) Figure 12.13	
Hexose Monophosphate Pool Figure 12.14	
Reaction Catalyzed by Phosphorylase Figure 12.15	
Chapter 13	
TCA Cycle Figure 13.4	
Major Regulatory Sites of the TCA Cycle Figure 13.14	
Chapter 14	
Overview of Electron Transport and Oxidative Phosphorylation Figure 14.1	
Apparatus for Measuring the Difference Between the E° Values of Two Redox Couples Figure 14.6	
Multisubunit Complexes of the Respiratory Chain Figure 14.8	42
Electron Transfer Through Complex I Figure 14.9	42
Complex II: The Succinate Dehydrogenase Complex Figure 14.10	43
Electron Transport Through Complex III: The Q Cycle Figure 14.11	43
Schematic Drawing of the Hemes and Cu Atoms in Complex IV Figure 14.12	44
ADP Can Be Phosphorylated to ATP Figure 14.13	45
Flow of Electrons Through the Electron-Transport Complexes Pumps Protons Across the Inner Membrane from the Matrix to the Intermembrane Space Figure 14.17	45
General Scheme Showing How Electron Transport Can Result in Proton Translocation Figure 14.20	46
Chapter 15	
Photosynthesis Harnesses the Energy of Sunlight for Biosynthesis Figure 15.1	47
Initial Electron-Transfer Steps in Reaction Centers of Purple Photosynthetic Bacteria Figure 15.12	48
Transport of Two Electrons from Photosystem II Through the Cytochrome b_6f Complex to Photosystem I Figure 15.23	48
Reductive Pentose Cycle, or Calvin Cycle Figure 15.25	49
Chapter 16	
Monosaccharide Interconversions Figure 16.2	50
Diagram of Events Involved in the Targeting and Translocation of Proteins Figure 16.8	51
Schematic Diagram Showing the Endoplasmic Reticulum and Golgi Network Figure 16.9	52
Synthesis of the Dolichol-Linked Oligosaccharide Figure 16.11	53
Schematic Diagram Illustrating the Transfer of Oligosaccharide to Protein in the ER Figure 16.12	54
Sorting of Proteins for Their Final Destination Occurs in the Trans Golgi Network (TGN) Figure 16.13	55

Chapter 17

Structures Formed by Detergents and Phospholipids in Aqueous Solution

Figure 17.6

A Model for the Structure of

Bacteriorhodopsin Figure 17.12

Topography of Glycophorin in the Mammalian Erythrocyte Membrane

Figure 17.18

Cells Drive Active Transport in a Variety of Ways Figure 17.26

Chapter 18

Synthesis and Degradation of Fatty Acids

Figure 18.1

Triacylglycerols Are Digested in the Intestine by Pancreatic Lipase

Figure 18.2

The β Oxidation of Fatty Acids

Figure 18.4

Outline of the Reactions for Fatty Acid Synthesis Figure 18.12(a)

Outline of the Reactions for Fatty Acid Synthesis Figure 18.12(b)

Proposed Organization of the Enzymatic Activities of Fatty Acid Synthase from Animal Liver Figure 18.14

Comparison Between Synthesis and Degradation of Fatty Acids in the Liver Figure 18.18

Acyl-CoA Is Not Transported Across the Inner Membrane of the Mitochondrion

Figure 18.21

Overview of the Conversion of Carbohydrate to Lipid in Rat Liver Cells and Its Regulation Figure 18.22

Chapter 19

Outline of Pathways for the Biosynthesis of Major Cellular Lipids Figure 19.1

The First Phase of Phospholipid Synthesis in *E. coli* and Eukaryotes Figure 19.2

Glycerolipid Synthesis on the Endoplasmic Reticulum from Rat Liver Figure 19.9

Possible Actions of PGI₂ and TXA₂ in Blood Clotting and Thrombosis Figure 19.20

Chapter 20

Formation of Cholesterol and Some of Its Derivatives Figure 20.1

The Conversion of Mevalonate to Isopentenyl Pyrophosphate and Dimethylallyl Pyrophosphate Figure 20.6

Biosynthesis of Farnesyl Pyrophosphate Figure 20.7

72

56 Postulated Scheme for the Synthesis, Assembly, and Secretion of VLDL by a Hepatocyte (Liver Cell) Figure 20.14

73

57 Receptor-Mediated Uptake of LDL by Human Skin Fibroblasts Figure 20.15

74

57 Fate of Cholesterol Synthesized in the Liver Figure 20.24(a)

75

58 Fate of Cholesterol Obtained from the Diet Figure 20.24(b)

75

Chapter 21

59 Outline of the Biosynthesis of the Twenty Amino Acids Found in Proteins Figure 21.1

76

60 The Conversion of Ammonia Into the α -Amino Group of Glutamate and Into the Amide Group of Glutamine

61

Figure 21.3

77

62 Distribution of Tryptophan Biosynthetic Enzyme Activities on Different Proteins in Bacteria and Fungi Table 21.1

63

78

Chapter 22

64 Amino Acids That Are Synthesized *de novo* in Mammals Figure 22.1

79

Chapter 23

65 Synthesis and Utilization of Nucleotides Figure 23.1

80

Chapter 24

66 Some Aspects of the Regulation of Energy Metabolism of Cells in a Typical Mammal Figure 24.1

81

67 Opposing Effects of Insulin and Glucagon on the Blood Glucose Level Figure 24.5

82

68 Possible Mechanisms of Hormone Action Figure 24.14

83

69 The Adenylate Cyclase Pathway of Hormone Receptor Action Figure 24.15

84

69 The Reversible Conversion of G_s between its Active and Inactive Forms and Inhibitory Effects of Two Potent Bacterial Toxins Figure 24.16

85

70 The Phosphatidylinositol (PIP₂) Pathway Figure 24.18

86

71 Growth Hormone Cascade Figure 24.20

87

Control of Hormone Synthesis and Secretion in the Anterior Pituitary Figure 24.21

87

Chapter 25

In vivo and *in vitro* Evidence That DNA Causes Transformation of *S. pneumoniae* Figure 25.1

Genome Size in Different Cells, Viruses, and Plasmids Figure 25.2

The Structure of a Deoxyribonucleotide Figure 25.3

Dimensions and Hydrogen Bonding of (a) Thymine to Adenine and (b) Cytosine to Guanine Figure 25.4

The Most Common Form of the Double-Helix DNA Figure 25.6

Different Conformations of Base-Paired DNA Figure 25.7

A Circular Duplex Molecule in Different Topological States Figure 25.10

Histone Octamer Inserted Into the Nucleosome Core Figure 25.18(b)

Chapter 26

The Meselson-Stahl Experiment Figure 26.2

Simulated Autoradiographs of the *E. coli* Chromosome After One or More Replications in the Presence of [³H] Thymidine Figure 26.3

Schematic Diagrams of Two Different Modes of DNA Synthesis at the Growth Fork(s) Figure 26.4

Models for Synthesis at the Replication Fork Figure 26.5

A Model for Discontinuous DNA Synthesis Figure 26.6

Template and Growing Strands of DNA Figure 26.7

Model for the Replication Fork in the *E. Coli* Chromosome Figure 26.12

Model of the Initiation Complex at the *E. Coli* Replication Origin (*oriC*) Figure 26.13

Holliday Model of Genetic Recombination Figure 26.22

Chapter 27

The Sanger Dideoxynucleoside Method of Sequencing DNA Figure 27.1(a)–(d)
Steps in the Polymerase Chain Reaction (PCR) Figure 27.2

Structure of the pBR322 Plasmid Figure 27.4

The Steps Involved in Assaying by Southern Blotting Figure 27.14

Inheritance Pattern of an RFLP Associated with Sickle-Cell Disease Figure 27.15 105

88 Linkage Map of the Human β -globin Gene Locus Figure 27.16 106

89 Jumping and Walking to Find the Cystic Fibrosis Gene Figure 27.18 106

Chapter 28

The Tertiary Structure of Yeast Phenylalanine tRNA Figure 28.3 107

91 Formation of the Initiation Complex for Transcription for the Three Major Classes of Eukaryotic RNA Polymerase

92 Figure 28.12 108

93 Comparative Processing of Major Transcripts in Prokaryotes and Eukaryotes

94 Figure 28.14 109

95 Schematic Drawing Showing Mouse β -Globin Precursor mRNA Hybridized with DNA Complementary to Mature mRNA

Figure 28.18 110

96 Splicing Scheme for Pre-mRNA Figure 28.19 110

Self-Splicing of Pre-rRNA from the Protozoan *Tetrahymena* Figure 28.21 111

Chapter 29

Overview of Reactions in Protein Synthesis Figure 29.1 112

97 Examples of Standard and Wobble and Base Pairs Formed Between the First

97 Based in the Anticodon and the Third Base in the Codon Figure 29.8 113

98 Formation of Aminoacyl-tRNA Figure 29.9 114

99 Processing of Insulin Figure 29.21 115

100 Two Successive Translocations Are Required to Target Proteins Such as Cytochrome c_1 to the Intermembrane

Space Figure 29.22 116

100 Major Events in the Posttranslational Processing of Collagen Figure 29.23 117

Chapter 30

Schematic Model Illustrating the Operon Hypothesis Figure 30.6 118

102 The Leader Region for the Tryptophan Operon Figure 30.12 119

103 Docking of the *trp* Repressor to the *trp* Operator Figure 30.29 120

Chapter 31

104 Model for the Regulation of Enzymes of the *GAL* System Figure 31.3 121

Complex Formed Between the <i>Drosophila</i> Homeobox Protein and DNA Seen from Two Angles Figure 31.18	122	Regulation of Protein Synthesis in the Rabbit Reticulocyte Figure 31.23	125
Schematic Representation of the C ₂ -H ₂ Zinc Finger Found Xfin from <i>Xenopus Laevis</i> Figure 31.19	122	Steps in the Development of <i>D. melanogaster</i> Figure 31.25	126
The Complex Formed Between the <i>zif268</i> Zinc Finger Protein and DNA Figure 31.20	123	Key Events in the Expression of Developmental Regulatory Genes in the Blastoderm Embryo Figure 31.28	127
Alternative Modes of Splicing of the Tropomyosin Gene Transcript in Different Tissues Figure 31.22	124	Influence of Developmental Regulatory Genes on One Another Figure 31.29	128
