Preface	ix	PART IV. PHYTOCHEMICAL ASPECTS	227
Glossary: the carnivorous genera, authorities and origin of the names	xi	Chapter 11. Phytochemicals	229
Abbreviations	xii	Chapter 12. The role of phytochemicals in carnivory	241
PART I. INTRODUCTION: THE SYNDROME AND THE HABITAT	1	Chapter 13. Herbal and medicinal uses of carnivorous plants	244
Chapter 1. The carnivorous syndrome	3	PART V. EXPLOITATION AND MUTUALISM	249
Chapter 2. The history of the study of carnivorous plants	12	Chapter 14. The associated fauna (Inquilines) and flora of carnivorous plants: the carnivorous plant as a phytotelm.	251
Chapter 3. The habitats of carnivorous plants and their regional distribution	21	Chapter 15. Pollination and reproductive strategies	270
PART II. ATTRACTION AND TRAPPING	47	Chapter 16. Mimicry or mutualism?	275
Chapter 4. General morphological and anatomical features of the traps of carnivorous plants	49	PART VI. EVOLUTION	281
Chapter 5. Attracting and retaining systems of carnivorous plants	74	Chapter 17. The fossil record, the evolution of the carnivorous syndrome and the phylogenetic tree	283
Chapter 6. Trapping mechanisms	86	Chapter 18. Features of the carnivorous syndrome in non-carnivorous plants and general aspects of their possible evolution	291
PART III. NUTRITION AND DIGESTION	127	Chapter 19. The evolution of features of carnivory as seen in the current flora	302
Chapter 7. The exploited prey and its nutritional value	129	Appendices	311
Chapter 8. The digestive glands and the secretion of digestive fluids	147	References	317
Chapter 9. The hydrolytic environment and processes of digestion	189	Index	344
Chapter 10. The absorption of the products of digestion	208
