

# Contents

<b>1</b>	<b>Biological membranes – overview</b>	<b>7</b>
<b>2</b>	<b>Curvature of membrane</b>	<b>11</b>
2.1	Curvature of curve . . . . .	11
2.2	Membrane curvature in space . . . . .	13
2.2.1	Monge representation . . . . .	19
2.3	Axisymmetric membrane . . . . .	21
2.4	Membrane curvature in differential geometry . . . . .	22
2.5	Curvature sign convention . . . . .	23
<b>3</b>	<b>Energy of lipid bilayer</b>	<b>25</b>
3.1	Bending energy . . . . .	25
3.2	Stretching energy . . . . .	27
3.3	Limits of the Helfrich model . . . . .	28
3.4	Thermal fluctuations . . . . .	29
<b>4</b>	<b>Spontaneous curvature of lipid layers</b>	<b>30</b>
4.1	Spontaneous curvature . . . . .	30
4.2	Bending energy of monolayer . . . . .	34
4.3	Bilayer elasticity . . . . .	34
<b>5</b>	<b>Membrane structures of the cell</b>	<b>38</b>
5.1	Curvatures of basic membrane shapes . . . . .	38
5.2	Energetics of membrane shapes . . . . .	39
5.2.1	Cylindrical shapes . . . . .	39
5.2.2	Spherical vesicles . . . . .	41
5.3	Changes in membrane topology . . . . .	41
<b>6</b>	<b>Mechanisms of active changes in membrane shapes</b>	<b>43</b>
6.1	Changes in membrane composition . . . . .	43
6.2	Interactions between proteins and membrane . . . . .	44
6.2.1	Scaffold proteins . . . . .	44
6.2.2	Changing spontaneous curvature of the membrane . . . . .	47
6.2.3	Bilayer couple mechanism . . . . .	48
6.3	Interactions between membrane and cytoskeleton . . . . .	49

---

<b>7</b>	<b>Asymmetry in spontaneous curvature</b>	<b>50</b>
7.1	Lipid principal curvatures . . . . .	50
7.2	Bending energy . . . . .	51
7.3	Orientational ordering of anisotropic lipids . . . . .	53
<b>8</b>	<b>Two component model</b>	<b>57</b>
<b>9</b>	<b>Energy of inverted hexagonal phase</b>	<b>60</b>
9.1	Geometry of inverse hexagonal phase . . . . .	60
9.2	Hydroxycarbon chain deformation . . . . .	61
9.3	Hexagonal phase energy . . . . .	62
9.4	Energy of $L_\alpha$ phase . . . . .	65
9.5	Optimal geometry of hexagonal phase . . . . .	66
<b>10</b>	<b>Curvature-induced sorting of bilayer membrane constituents</b>	<b>69</b>
10.1	Roux experiment . . . . .	70
10.2	Stability of tubular membrane protrusions . . . . .	72
10.3	Stability of spherical bud and neck . . . . .	79
10.4	Chemical incompatibility of lipid rafts . . . . .	82
10.5	Role of lipid asymmetry in lipid sorting . . . . .	84
<b>11</b>	<b>Minimization of free energy of an axisymmetric closed lipid bilayer</b>	<b>85</b>
<b>12</b>	<b>The shape analysis of a bilayer lipid nanotube</b>	<b>90</b>
<b>13</b>	<b>Classical mechanical approach</b>	<b>94</b>
13.1	Intrinsic curvature, anisotropic inclusions and embedded molecules . . . . .	94
13.2	Curvature, curvature tensor and metric . . . . .	94
13.3	Koiter's energy and Helfrich energy . . . . .	97
<b>14</b>	<b>Recommended readings</b>	<b>100</b>
