

CONTENT

1. INTRODUCTION	5
1.1 Polyurethane chemistry	5
1.1.1 Isocyanates	5
1.1.2 Polyols	6
1.1.3 Reactivity of functional groups of isocyanates and hydroxy precursors	6
1.1.4 Kinetic of polyurethane formation	7
1.1.5 Catalysis of the isocyanate-hydroxy reaction	8
1.2 Crosslinking and network formation	9
1.2.1 Precursors of polymer networks	10
1.3 Cyclization	11
2. AIM	13
3. EXPERIMENTAL PART	15
3.1 Kinetics investigation of monofunctional OH precursors	15
3.1.1 Preparation of the reaction mixture	15
3.1.2 The kinetic measurements	16
3.2 The characterization of tri-HDI	16
3.3 Preparation of crosslinked systems	17
3.4 Determination of gel point conversion	17
3.5 Rheological measurements and determination of equilibrium moduli	18
4. RESULTS AND DISCUSSION	19
4.1 Kinetics investigation of polyurethane formation	19
4.1.1 Kinetics of model systems: Reactions of low molecular weight compounds	19
4.1.2 Kinetics investigation of bifunctional hydroxy precursors with monoisocyanate	20
4.2 Cyclization	21
4.3 Dynamic mechanical analyses of polyurethane networks	24
