Preface ix

Introduction xi

## 1. Bacterial Metabolism 1

1.1 General Considerations: Functional Properties of Bacteria 1

1.2 Bacterial Metabolism 4

1.3 Dissimilatory Metabolism 7

1.4 Assimilatory Metabolism 24

1.5 Bioenergetics of Microbial Metabolism 27

## 2. Transport Mechanisms 35

2.1 Physical Transport Mechanisms 36

2.2 Bacterial Motility and Sensory Motile Behaviour 45

## 3. Degradation of Organic Polymers and Hydrocarbons 49

3.1 Substrates and the Efficiency of Degradation 49

3.2 Hydrolytic Enzymes 52

3.3 Mineral Nutrients and Decomposition Rates of Plant Derived Detritus 53

3.4 Humic Material and Hydrocarbons 55

## 4. Comparison of Element Cycles 59

## 5. The Water Column 67

5.1 The Composition of Planktonic Prokaryote Communities 69

5.2 Organic Matter: Composition, Origin and Turnover 72

5.3 Suspended Particles: Formation and Coupling Between  
Plankton and Sediments 75

5.4 Bacteria and Cycling of N and P 78

5.5 The Fate of Bacterial Cells 79

5.6 Motile Chemosensory Behaviour 81

5.7 Stratified Water Columns 84

6. Biogeochemical Cycling in Soils 89
  - 6.1 Soil Water as a Master Variable for Biogeochemical Cycling 93
    - 6.2 Water Stress Physiology 97
    - 6.3 Responses to Plant Organic Matter 109
  - 6.4 Responses of Soil Biogeochemistry to Disturbance and Change 115
7. Aquatic Sediments 121
  - 7.1 Vertical Zonation, Vertical Transport, and Mixing 122
  - 7.2 Element Cycling in Sediments 128
  - 7.3 Sediments in the Light 131
  - 7.4 Microbial Mats 133
8. Microbial Biogeochemistry and Extreme Environments 143
  - 8.1 Microbial Biology and Extreme Environments: An Overview 144
  - 8.2 Biogeochemistry and Extreme Environments 147
  - 8.3 Hypersaline Microbial Mats as Model Extreme Environments 149
  - 8.4 Sub-Surface Environments as Extreme Systems 153
  - 8.5 Thermophiles and Hyperthermophiles in Extreme Environments 156
  - 8.6 Additional Considerations 160
9. Symbiotic Systems 163
  - 9.1 Symbiotic Polymer Degradation 165
  - 9.2 Symbiotic N<sub>2</sub> Fixation 174
  - 9.3 Autotrophic Bacteria as Symbionts 178
10. Microbial Biogeochemical Cycling and the Atmosphere 183
  - 10.1 The Atmosphere as an Elemental Reservoir 184
  - 10.2 Atmospheric Structure and Evolution 188
  - 10.3 Synopsis of Trace Gas Biogeochemistry and Linkages to Climate Change 195
  - 10.4 Trace Gas Dynamics and Climate Change: An Analysis of Methane Production and Consumption 211
11. Origins and Evolution of Biogeochemical Cycles 221
  - 11.1 Biogeochemical Cycles and Thermodynamics 222
  - 11.2 Pre-Biotic Earth and Mineral Cycles 226
  - 11.3 The Earliest Life and its Origin 228
  - 11.4 Precambrian Life and Precambrian Biogeochemical Cycling 231

Appendix 1: Thermodynamics and Calculation of Energy  
Yields of Metabolic Processes 237

---

Appendix 2: Phylogeny and Function in  
Biogeochemical Cycles 247
