

Contents

Foreword	i
Organization	ii
Table of contents	iv
I Keynote lectures	
1	
<i>Iglič A., Hägerstrand H., Kralj-Iglič V.</i> Biomechanics of budding of cellular membranes	2
<i>Zernicke R.</i> Mechanisms of Bone Adaptation	4
<i>Hayashi K.</i> Adaptation and Remodeling of Vascular Wall in Hypertension	6
II Extended abstracts	
8	
<i>Bouda T., Horak Z., Jirman R.</i> Identification of the Changes in Extent of Loading the TM Joint on the Other Side Owing to the Implantation of Total Joint Replacement	9
<i>Cañadas P., Maurin B., Baudriller H.</i> Initial-stress system modelling applied to adherent cell mechanics	11
<i>Šulík J.</i> Child leg Deformity Treatment	13
<i>Daniel M., Novotná D.</i> Patient specific model of spine loading	15
<i>Děťák M., Burša J., Zemánek M.</i> Biaxial tensile testing of porcine aortas	17
<i>Ďoubal S., Klemra P., Rejchrt P.</i> Dynamic measurements of viscoelasticity	19

<i>Elsami M., Tanaka C., Anbarian M., Allard P., Eng P.</i>	
Foot Orthoses Increase Perceived Comfort by Correcting Foot Angles in Individuals with Pes Cavus	20
<i>Forghany S., Tyson S., Nester C., Jones R., Preece S.</i>	
Functional measures of lower limb spasticity in stroke during gait	22
<i>Franta L., Novotný P., Suchánek J.</i>	
Simulation of knee joint dynamics and kinematics under realistic conditions - part II	23
<i>Frehil B., Crocombe A.D., Cirovic S., Agarwal Y.</i>	
Application of Bone Remodelling Algorithms to Knee Arthroplasty	25
<i>Fuis V., Hlavoň P.</i>	
Stress Analysis of the Ceramics Head with Micro and Macro Shape Deviations of the Contact Areas	27
<i>Havránek A.</i>	
The Role of Viscoelasticity in Biomechanics	29
<i>Hemza J., Maršík F.</i>	
The biomechanical characteristics of bridging veins	31
<i>Hlavoň P., Florian Z.</i>	
Stress analysis of the radial head replacement in an elbow articulation	33
<i>Holub O., Otáhal M., Kronek J., Otáhal S.</i>	
Instantaneous axis of rotation as a key data for intervertebral modelling	35
<i>Holub T., Lopot F., Kubový P.</i>	
Real conditions effecting on falling human body generated by dynamic ropes	37
<i>Horák Z., Kubový P., Stupka M.</i>	
Experimental Measurements and Numerical Simulations of the Mechanical Loading Influence on the Hip Joint Osteoarthritis	39
<i>Horný L., Žitný R., Chlup H.</i>	
Constitutive modelling of arterial wall based on limiting fibre extensibility	41
<i>Hyung T-Y., Chang J-S., Tang W-T.</i>	
The Study of Isokinetic Evaluation of Knee in Elite Taekwondo Athletes	43
<i>Hwang S., Kim Y., Kim Y.</i>	
Joint Support Moments and Muscle Forces of the Lower Limbs during Squat and Stoop Lifting	45
<i>Hwang S.J., Kim J.Y., Son J.S., Sohn R.H.</i>	
Kim Y.H.	47

Jandačka D., Vaverka F.	
The Influence of gender and particular exercises on the optimal load for maximal power output	49
Jvadi M., Haghpanahi M.	
A Three Dimensional Parametric Model of Lower Cervical Spine (C3-C7)	51
Jíra A., Petrtýl M., Bastl Z.	
Interactions between the implanted stem and wall of femoral diaphyses	53
Kaczmarská A., Štěpánik Z., Jeřábková H., Vaněk P., Štembera V., Maršík F., Otáhal J.	
Flow of the Cerebrospinal Fluid in Cervical Spinal Canal	55
Klika V., Maršík F.	
Bone remodeling driven by dynamic loading and drug treatment	57
Konopková R., Krajčovičová E., Martínková M., Kubová H., Otáhal J.	
Stimulus-induced Light Transmittance Changes in CA3 Region of Hippocampus in Vitro is Glutamate Dependent	59
Kronek J., Holub O., Otáhal S.	
Microrheological properties of the intervertebral disc	61
Kryštůfek J., Vampola T., Krásenský J., Seidl Z.	
Microrheological properties of the intervertebral disc	63
Kubový P., Lopot F., Prokešová M., Riha M., Holub T., Otáhal S., Jelen K.	
The measurements of the rheological properties changes	65
Lee J.-K., Nam Y., Uhm H.W.	
Estimation of knee joint moment using neural network in dynamic movement	67
Kim H.D., Hwang S.J., Son J., Kim H.S., Kim Y., Lim D.	
Analysis of Joint moments and muscle forces variations during walking with sided load carriage as one of activities of daily living	69
Lisal J., Petrtýl M.	
Polymer Replacement of Articular Cartilage - Numerical Analyses	71
Lobovský L., Křen J.	
Meshless approach to fluid-structure interaction simulations	73
Lopot F., Jelen K., Budka Š., Nováček V., Sedláček R., Kubový P., Holub T.	
Rheological properties of uterine wall tissue visco elastic model - experimental quantification	75
Lukeš J., Zysset P. K., Otáhal S.	
Identification of Material Anisotropy of Mineralized Tissue by	

	Nanoindentation	77
Macková H., Chlup H., Žitný R.		
Methodology of the pulse wave velocity measurement		79
Bougherara H., Miric M., Zdero R., Shah S., Hardisty M., Zalzal P., Schemitsch E.		
A Novel Biomimetic Intramedullary Nailing Implant for the Treatment of Femur Fracture		81
Moravec F., Holeček M.		
Constitutive model of cellular tissues which dissipation is involved by the fluid movement of matrix around cells		83
Mucha P., Burša J., Ryšavý P.		
Stress-strain analysis of abdominal aortic aneurysm		85
Myslivec R., Mařík I., Zemková D., Maříková A., Petrtyl M.		
X-ray assessment of the callus in leg lengthening of achondroplastic patients		87
Návrat T., Florian Z., Vosynek P.		
Strain-stress analysis of pathological hip joint after osteotomy		89
Niezgodska M., Dolanská T., Lopot F., Véle F., Otáhal S.		
Objectivisation of impact breathing exercises of spine		91
Otáhal J.		
Fast oscillation of regional cerebral blood flow after stimulation in rats		93
Otáhal M., Holub O., Kronek J., Sochor M., Otáhal S.		
Intervertebral kinematics and rheology		95
Paloušek D., Návrat T.		
Strain gauge measurement of transtibial prosthesis		97
Perutkova S., Daniel M.		
Deviation from sphericity in H_{II} phase.		99
Petrášová Š., Dirbáková S., Zemková D., Mařík I.		
Assessment of tibiofemoral angle in bone disorders		101
Petrtyl M. et al	Replacement of hyaline cartilage in big joints - verifications "in vivo"	103
Polyzos Ch., Otáhal S.		
The objective relationship of abnormal posture and locomotion in scoliosis		105
Ravnik D.		
Musculo-skeletal discomfort and pain during and after rally stage driving		107
Rohan E., Cimrman R., Naili S., Lemaire T.		
Multiscale modeling of cortical bone using homogenization		109

<i>Rosenberg J., Hynčik L.</i>		
Modelling of the influence of the stiffness evolution on the behaviour of the muscle fibre		111
<i>Rychlik M., Stankiewicz W., Morzynski M.</i>		
Application of Empirical Modes for Creation of 3D Anthropometric Database		113
<i>Mohammad Sharif Shourijeh, Farhad Tabatabai Ghomshe, Ahmad Reza Arshi</i>		
A New Model to Investigate Effects of Adding Flexor and Extensor Elements on Ankle Joint Vertical Contact Force during Human Normal Gait		115
<i>Sochor M., Balík K., Suchý T., Sucharda Z., Černý M.</i>		
Mechanical Behaviour of Aramid Fibers/Polysiloxane Matrix Composites Modified by Bioactive Nano/Micro Particles		117
<i>Sohn R.H., Park S.W., Son J.S., Kim Y.H.</i>		
Gait Event Detection using Tilt Sensor Integrated Stimulation Pad for FES walking		119
<i>Son J.S., Kim Y.H.</i>		
Muscle Force Estimation during Heel-Rise Movement Using Static Optimization		121
<i>Straus J.</i>		
Biomechanical analysis of extreme dynamic loading on organism		123
<i>Tetková Z., Jelen K., Koudelka T.</i>		
The Nonlinear Model of Contact Pressure Distribution Based on Footprint		125
<i>Tobias M., Ďoubal S.</i>		
Viscoelastic properties of porcine aorta walls		127
<i>Uhm H.W., Nam Y., Lee W.E.</i>		
Modeling, Analysis and Simulation of Human Gait Motion		129
<i>Vaverka F., Gallo J., Elfmark M.</i>		
The change in the time and force structure of the gait after total hip replacement (case study)		131
<i>Vranová H., Zeman J., Havránek A.</i>		
Evaluation of the elasticity of a skin with a scar in vivo		133
<i>Vychytil J., Holeček M.</i>		
Two-scale model of a prestressed tissue		135
<i>Young P., Coward S., Raymond D.</i>		
Image-based mesh generation and its application in computational biomechanics		137
