Preface xi  
Acknowledgments xiv

## PART I Introduction and the physical environment 1

### 1 What is ecology in action? 2

- 1.1 What are ecological questions? 4
- 1.2 How do ecologists test hypotheses about ecological processes? 5
- 1.3 How do ecologists use observation, modeling, and experimentation? 10
- 1.4 How do ecologists ask questions that link different levels of the biological hierarchy? 12
  - Summary 18
  - Further reading 19
  - End-of-chapter questions 19

### 2 The physical environment 22

- 2.1 How do physical principles influence climatic variation across the globe? 24
- 2.2 What are terrestrial biomes? 29
- 2.3 How do biomes change over time? 38
- 2.4 What are aquatic biomes? 41
  - Summary 54
  - Further reading 54
  - End-of-chapter questions 54

## PART II Evolutionary and organismal ecology 57

### 3 Evolution and adaptation 58

- 3.1 How do ecologists use genetic and molecular approaches to study evolution? 60
- 3.2 What four processes interact to bring about evolutionary change? 61
- 3.3 Does a changing environment influence the costs and benefits of adaptation? 67
- 3.4 How do natural selection and sexual selection influence an individual's fitness? 71
- 3.5 How might natural selection cause new species to evolve? 73
- 3.6 How do evolutionary ecologists unravel evolutionary relationships? 77
  - Summary 83
  - Further reading 83
  - End-of-chapter questions 84

### 4 Physiological and evolutionary ecology of acquiring nutrients and energy 86

- 4.1 How does energy enter an ecosystem? 88
- 4.2 What is the impact of nutrient availability on species distribution and abundance? 97
- 4.3 What are energy sources for heterotrophs? 100
- 4.4 How does the ratio of available nutrients influence ecological processes within a community? 107
- 4.5 How can organisms avoid being eaten? 109
  - Summary 113
  - Further reading 113
  - End-of-chapter questions 114

### 5 Physiological and evolutionary ecology of temperature and water relations 116

- 5.1 How do organisms respond to physiological challenges over different time scales? 118
- 5.2 How does body temperature influence physiological performance? 119
- 5.3 What determines an organism's water balance? 128
- 5.4 How are temperature regulation and water regulation functionally linked? 134
- 5.5 How do temperature, solute concentration, and water availability affect species distribution and abundance? 137
- 5.6 Is Earth's changing thermal and hydrologic environment influencing the distribution and abundance of species? 141
  - Summary 143
  - Further reading 144
  - End-of-chapter questions 144

### 6 Behavioral ecology 146

- 6.1 How does natural selection operate on animal behavior? 148
- 6.2 How can cost-benefit approaches address questions about spatial distributions, foraging, and mating behavior? 152
- 6.3 What physiological and ecological factors influence the evolution of mating systems? 158
- 6.4 How can indirect selection lead to cooperative behavior among relatives? 164
- 6.5 How do game theory models help explain the evolution of cooperation among unrelated individuals? 169
  - Summary 173
  - Further reading 173
  - End-of-chapter questions 174

- 7 Bernd Heinrich: studying adaptation in the field and the laboratory 176**
- 7.1 How did early experiences inspire Heinrich's approach to science? 177
  - 7.2 How do sphinx moths thermoregulate? 179
  - 7.3 How do bumblebees thermoregulate? 182
  - 7.4 How do slow-moving butterflies avoid being eaten? 184
  - 7.5 Why do ravens yell? 186
  - 7.6 How smart are ravens? 187
- Summary* 190  
*Further reading* 190  
*End-of-chapter questions* 191
- PART III Population ecology 193**
- 8 Life history evolution 194**
- 8.1 How does allocation of parental resources to reproduction influence a species' life history traits? 196
  - 8.2 What is the tradeoff between parental resources invested in any one reproductive event and number of lifetime reproductive events? 203
  - 8.3 How does environmental variation select for phenotypic plasticity in life history traits? 209
- Summary* 215  
*Further reading* 216  
*End-of-chapter questions* 216
- 9 Distribution and dispersal 218**
- 9.1 How are individuals distributed within populations? 220
  - 9.2 How do species distribution patterns change over time? 223
  - 9.3 In what ways do abiotic factors influence the distribution of populations? 229
  - 9.4 In what ways do biotic factors influence the distribution of populations? 232
  - 9.5 How does ecological niche theory help ecologists understand a species' current distribution and predict its future distribution? 235
- Summary* 241  
*Further reading* 241  
*End-of-chapter questions* 242
- 10 Population abundance and growth 246**
- 10.1 How do ecologists estimate population size? 248
  - 10.2 How do mathematical models project population growth rates? 253
  - 10.3 How do density-independent and density-dependent factors influence birth and death rates? 259
  - 10.4 How do ecologists use the carrying capacity to model density-dependent changes in birth and death rates? 263
  - 10.5 What factors will influence the growth rates of future human populations? 265
- Summary* 270  
*Further reading* 271  
*End-of-chapter questions* 271
- 11 Conservation ecology 274**
- 11.1 Why do very small populations have a high extinction rate? 276
  - 11.2 How do ecologists use mathematical models to predict population viability? 277
  - 11.3 How can immigration of individuals from nearby populations maintain species richness and high population size? 282
  - 11.4 How can human-mediated changes to habitats cause species to become endangered, or to go extinct? 288
- Summary* 297  
*Further reading* 297  
*End-of-chapter questions* 298
- 12 Jane Goodall and Anne Pusey: researching the chimpanzees of Gombe 300**
- 12.1 Why did Jane Goodall study chimpanzees? 302
  - 12.2 What did Goodall learn during her years at Gombe? 303
  - 12.3 How did environmental activism change Goodall's career? 307
  - 12.4 How have Anne Pusey and other researchers collaborated in chimpanzee research? 310
  - 12.5 What ecological factors threaten the viability of the Gombe chimpanzee population? 315
- Summary* 321  
*Further reading* 322  
*End-of-chapter questions* 322
- PART IV Community ecology 325**
- 13 Interspecific competition 326**
- 13.1 What types of resources do organisms compete for? 328
  - 13.2 How can interspecific competition lead to competitive exclusion? 331

- 13.3 How do theoretical models and empirical studies identify conditions promoting the coexistence of competing species? 333
- 13.4 How do indirect effects and asymmetric interactions operate in natural communities? 343  
*Summary* 347  
*Further reading* 348  
*End-of-chapter questions* 348
- 14 Predation and other exploitative interactions 350**
- 14.1 What are the different types of exploitative interactions? 352
- 14.2 How do exploiters regulate the abundance of their prey or hosts? 352
- 14.3 How do prey and hosts defend themselves? 356
- 14.4 How does the interaction between exploiters and their prey or hosts evolve over time? 361
- 14.5 How do theoretical models in association with empirical studies describe the outcomes of exploitative interactions? 363  
*Summary* 374  
*Further reading* 374  
*End-of-chapter questions* 375
- 15 Facilitation 378**
- 15.1 What are the consequences of disrupting mutualisms? 380
- 15.2 What are the benefits of facilitative interactions? 385
- 15.3 What conditions favor the evolution of facilitative interactions? 391  
*Summary* 398  
*Further reading* 399  
*End-of-chapter questions* 399
- 16 Complex interactions and food webs 402**
- 16.1 How do ecologists explore community processes across scales of space and time? 404
- 16.2 How are ecological communities structured? 406
- 16.3 How do food webs describe community structure? 411
- 16.4 What factors influence community structure and functioning? 415  
*Summary* 426  
*Further reading* 427  
*End-of-chapter questions* 427
- 17 Biological diversity and community stability 430**
- 17.1 How do ecologists describe and measure biological diversity? 432
- 17.2 How do biotic and abiotic factors influence community species diversity? 438
- 17.3 What is the relationship between species diversity and community stability? 448  
*Summary* 453  
*Further reading* 454  
*End-of-chapter questions* 454
- 18 Dan Janzen and Winnie Hallwachs: community interactions and tropical restoration through biodiversity conservation 456**
- 18.1 What experiences and events launched Janzen's career? 457
- 18.2 How did viewing community interactions from the perspective of the organism and its evolutionary history shape Janzen's research program? 459
- 18.3 What factors motivated Janzen's conservation efforts in Costa Rica? 466
- 18.4 What factors supported the restoration of Santa Rosa, and ACG as a whole, and the continuation of scientific research there? 468  
*Summary* 474  
*Further reading* 474  
*End-of-chapter questions* 475
- PART V Ecosystem and global ecology 477**
- 19 Ecosystem structure and energy flow 478**
- 19.1 How do climate and nutrients influence ecosystem production? 480
- 19.2 What are the important components of ecosystem structure? 486
- 19.3 What is the relationship between food chain length and ecosystem structure and functioning? 491  
*Summary* 496  
*Further reading* 496  
*End-of-chapter questions* 497
- 20 Nutrient cycles: global, regional, and local 500**
- 20.1 How do microorganisms move nitrogen compounds within and between ecosystems? 502
- 20.2 How do biological, geological, chemical, and physical processes interact in the global nitrogen cycle? 505

- 20.3 How do oceans, freshwater systems, and soils interact in the global phosphorus cycle? 509
- 20.4 What processes cycle nutrients within ecosystems? 511  
*Summary* 519  
*Further reading* 519  
*End-of-chapter questions* 520
- 21 Disturbance and succession 522**
- 21.1 What is primary succession, and when does it occur? 524
- 21.2 What is secondary succession, and when does it occur? 528
- 21.3 What mechanisms underlie the process of succession? 531
- 21.4 How do animal communities respond to disturbance? 533
- 21.5 Can an ecosystem shift abruptly from one stable state to another? 540  
*Summary* 545  
*Further reading* 545  
*End-of-chapter questions* 546
- 22 Geographic and landscape ecology 548**
- 22.1 What are the major components of island biogeography theory? 550
- 22.2 How do historical events help explain the current distribution of a species or taxonomic group? 557
- 22.3 How does landscape structure influence the distribution and abundance of species? 566  
*Summary* 575  
*Further reading* 575  
*End-of-chapter questions* 576
- 23 The carbon cycle and climate change ecology 578**
- 23.1 How do biogeochemical processes move carbon through the global system? 580
- 23.2 How do greenhouse gases directly influence Earth's temperature? 586
- 23.3 How do indirect effects and feedback interactions influence global climate? 588
- 23.4 What are climate models and what do they tell us? 591
- 23.5 Are natural ecosystems changing in response to climate change? 596  
*Summary* 603  
*Further reading* 604  
*End-of-chapter questions* 604
- 24 Jane Lubchenco: community, ecosystem, and global ecology 608**
- 24.1 How did NOAA respond to the explosion of the *Deepwater Horizon*? 609
- 24.2 How did Lubchenco get started in marine ecology? 610
- 24.3 How did moving to New England affect Lubchenco's research direction? 613
- 24.4 What factors influence the structure and functioning of temperate and tropical ecosystems? 620
- 24.5 How did Lubchenco expand her scope into politics and scientific communication? 623  
*Summary* 628  
*Further reading* 628  
*End-of-chapter questions* 629
- Epilogue 632**
- Ecological research programs and hierarchical structure 632
- Asking ecological questions 633
- Glossary 634
- References 642
- Figure and quotation credits 663
- Index 683
