CONTENTS

Preface xi

PART ONE Basics

1. Population Dynamics 3
   - 1.1. Fitness 4
   - 1.2. Tradeoffs and fitness dependence 5
   - 1.3. Dependence on environment, density, and frequency 8
   - 1.4. State space geometry 9
   - 1.5. Memes and genes 12
   - 1.6. Finite populations and randomness 13
   - 1.7. Replicator dynamics in discrete time 13
   - 1.8. Replicator dynamics in continuous time 15
   - 1.9. Steady states and stability 16
   - 1.10. Sexual dynamics 18
   - 1.11. Discussion 25

   Appendix A: Derivation of the Fisher equation 25
   Appendix B: Replicator dynamics, mean fitness, and entropy 26
   Exercises 29
   Notes 30
   Bibliography 32

2. Simple Frequency Dependence 33
   - 2.1. The Hawk-Dove game 34
   - 2.2. H-D parameters and dynamics 36
   - 2.3. The three kinds of 2×2 games 40
   - 2.4. Dilemmas played by viruses and eBay sellers 45
   - 2.5. Nonlinear frequency dependence 49
   - 2.6. RPS and the simplex 51
   - 2.7. Replicator dynamics for RPS 53

2.8. Discussion 58
Appendix: Payoff differences in 3 × 3 games 59
Exercises 60
Notes 62
Bibliography 63

3. Dynamics in *n*-Dimensional Games 64
   3.1. Sectoring the 2-d simplex 64
   3.2. Estimating 3×3 payoff matrices 69
   3.3. More strategies 73
   3.4. Nonlinear frequency dependence 77
   3.5. Two-population games: The square 78
   3.6. Hawk-Dove with two populations 81
   3.7. Own-population effects 83
   3.8. Higher-dimensional games 87
   3.9. Alternative dynamics 87
   3.10. Discussion 90
   Appendix: Estimating 3 × 3 payoff matrices 91
   Exercises 98
   Notes 99
   Bibliography 100

4. Equilibrium 102
   4.1. Equilibrium in 1 dimension 103
   4.2. Nash equilibrium with *n* strategies 106
   4.3. ESS with *n* strategies 107
   4.4. Equilibrium in multi-population games 114
   4.5. Fisherian runaway equilibrium 115
   4.6. Discussion 117
   Appendix: Techniques to Assess Stability 118
   Exercises 124
   Notes 125
   Bibliography 125

5. Social Games 127
   5.1. Assortative matching 128
   5.2. Social twists 131
   5.3. Inheritance from two parents 135
   5.4. The standard Price equation 141

5.5. Group-structured Price equation and cooperation 143
5.6. Group structure and assortativity in lizards 145
5.7. Price equation in continuous time 147
5.8. Discussion 149
Appendix: Equilibrium in the Kirkpatrick (1982) model 149
Exercises 152
Notes 152
Bibliography 153

6. Cellular Automaton Games 155
6.1. Specifying a CA 155
6.2. Prisoner's dilemma 158
6.3. Snowdrift 159
6.4. Public goods games with two strategies 160
6.5. Spatial rock-paper-scissors dynamic 163
6.6. Application to bacterial strains 166
6.7. Buyer-Seller game as a two-population CA 168
Exercises 170
Notes 171
Bibliography 172

PART TWO APPLICATIONS

7. Rock-Paper-Scissors Everywhere 177
7.1. Some RPS theory 178
7.2. Humans play RPS in the lab 183
7.3. RPS mating systems 187
7.4. Predators learn 194
7.5. A co-evolutionary model of predators and prey 196
7.6. Discussion 203
Appendix 204
Exercises 206
Notes 208
Bibliography 209

8. Learning in Games 212
8.1. Perspectives on learning and evolution 213
8.2. An empirical example 214
8.3. Learning rules 215

8.4. Decision rules 217
8.5. Estimating a model 219
8.6. Results 221
8.7. Learning in continuous time 223
8.8. Other models of learning 226
8.9. Open frontiers 229
Appendix: Towards models of learning in continuous time 231
Exercises 232
Notes 233
Bibliography 234

9. Contingent Life-Cycle Strategies 236
9.1. Hawks, doves, and plasticity 238
9.2. Costly plasticity 242
9.3. Classic life-cycle analysis 244
9.4. Strategic life-cycle analysis: Two periods 245
9.5. Strategic life-cycle analysis: More general cases 248
9.6. Application: Male elephant seals 250
9.7. Discussion 257
Appendix: Formalizing a perfect lifetime equilibrium 259
Exercises 261
Notes 262
Bibliography 263

10. The Blessing and the Curse of the Multiplicative Updates 265
Manfred K. Warmuth
10.1. Demonstrating the blessing and the curse 266
10.2. Dispelling the curse 270
10.3. Discussion 284
Notes 286
Bibliography 287

11. Traffic Games 290
John Musacchio
11.1. Simple non-atomic traffic games 291
11.2. Braess's paradox 294
11.3. The price of anarchy with nonlinear latency functions 296
11.4. Pigovian taxes 298
11.5. Selfish pricing 299

11.6. Circuit analogy 302
11.7. Discussion 308
Exercises 309
Notes 311
Bibliography 311

12. International Trade and the Environment 312
Matthew McGinty
12.1. Economics and Evolutionary Game Theory 313
12.2. Static Cournot model 314
12.3. Green technology diffusion 317
12.4. International trade 321
12.5. International trade and pollution taxation 326
12.6. Other economic applications 328
Exercises 331
Notes 334
Bibliography 334

13. Evolution of Cooperation 336
13.1. Coordination, cooperation, and social dilemmas 337
13.2. Solution K: Kin selection 339
13.3. Solution R: Bilateral reciprocity 343
13.4. Social preferences: A problematic solution 345
13.5. Early human niches 348
13.6. Solution M: Moral memes 352
13.7. Illustrative models 354
13.8. Prehistoric and historic moral codes 357
13.9. Discussion 361
Exercises 361
Notes 362
Bibliography 365

14. Speciation 369
14.1. Long-run evolution 370
14.2. Adaptive dynamics 371
14.3. Morph loss in RPS 375
14.4. Emergent boundary layers in cellular automata 380
14.5. Speciation in social and virtual worlds 383
14.6. Discussion 389
Exercises 389

Notes 391
Bibliography 393
