## Part I

<b>Chapter 1 Introduction</b>	<b>7</b>
1.1.Trading Mechanisms in Security Markets	8
1.2.Underlying Securities	8
1.3 Derivatives	12
1.3.1 Contingent Claims	12
1.3.2 Forward contracts	13
1.3.3 Future contracts	13
1.3.4 Options	14
1.3.5 Swaps	21
1.4 Price Construction Strategy	21
1.4.1 Simple model	21
1.4.2 Arbitrage pricing	23
1.5 Expectation theory	24
1.6 A weak law of prices	25
1.7 Central Questions	25
<b>Chapter 2 Stochastic Processes in Discrete Time</b>	<b>27</b>
2.1 Information and Filtrations	27
2.2 Discrete-Parameter Stochastic Processes	28
2.3 Markov Process	29
2.4 Martingales	29
2.5 Gaussian Models	37
2.6 Applications to Finance	41
<b>Chapter 3 Finance in Discrete Time</b>	<b>47</b>
3.0 Introduction	47
3.1 Classical Theories	56
3.1.1 Markovitz' Diversification	56
3.1.2 Capital Asset Pricing Model (CAPM)	58
3.1.3 CAPM and Equilibrium Returns Modeling	68
3.1.3.1 Zero-beta CAMP	68
3.1.3.2 Non-Marketable Assets	71
3.1.3.3 Asset Demands	71
3.1.3.4 Measures of Performance	73
3.1.3.5 Heterogeneous Expectations	74
3.1.4 Arbitrage Pricing Theory	75
3.1.4.1 Arbitrage-free markets	75
3.1.4.2 APT	76
3.1.5 Efficient Market Hypothesis	81
3.1.5.1 Introduction	81
3.1.5.2 Classical Concepts	85
3.1.5.3 Analysis of Empirical Data	86
3.1.5.4 Revision of the Classical Concepts	87

<b>3.2 The Model of Finite Markets</b>	88
<b>3.3 Equivalent Martingale Measures</b>	90
<b>3.4 Binomial Model of the Financial Market</b>	91
<b>3.5 Binomial Representation Theorem</b>	95
3.5.1 Existence of Predictable Process	95
3.5.2 Construction Strategy	95
3.5.3 Existence of Self-Financing Strategies	96
3.5.4 Self-Financing Hedging Strategies	96
3.5.5 Option Price Formula (Discrete Case)	97
3.5.6 Contingent Claim Valuation	97
<b>3.6 Arbitrage Price Process</b>	99
<b>3.7 Complete Markets</b>	100
<b>3.8 Fundamental Theorem of Asset Pricing</b>	101
<b>3.9 Cox-Ross-Rubinstein Model</b>	102
<b>3.10 Multifactor Models</b>	106
<b>3.11 Overture to continuous models</b>	107
<b>Chapter 4 Stochastic Processes in Continuous Time</b>	<b>111</b>
<b>4.1 The random walk</b>	111
<b>4.2 Brownian Motion</b>	111
<b>4.3 Stochastic calculus</b>	112
<b>4.4 Stochastic Differential Equations</b>	114
4.4.1 Ito's Calculus	114
4.4.2 Product Rules	114
4.4.3 Stochastic Differential Equation(SDE) from the Processes	115
4.4.4 Processes from Stochastic Differential Equations (SDE)	115
<b>4.5 Change of Measure</b>	116
4.5.1 Radon-Nikodým Derivative	116
4.5.2 Martingale Representation Theorem	116
4.5.3 Driftlessness	118
4.5.4 Summary	118
<b>Chapter 5 Finance in Continuous Time</b>	<b>119</b>
<b>5.1 Financial Market Model</b>	119
5.1.1 Model of Finite Markets	119
5.1.2 Pricing and Hedging of Contingent Claims	119
<b>5.2 Equivalent Martingale Measures</b>	120
5.2.1 Arbitrage Opportunity	120
<b>5.3 Construction strategies</b>	122
5.3.1 Portfolio	122
<b>5.4 Black-Scholes Model</b>	123
5.4.1 Basic Black-Scholes Structure	123
5.4.1.1 Zero Interest Rates	124
5.4.1.2 No-zero Interest Rates	125
5.4.1.3 Self-financing Strategies	126
5.4.1.4 Finding a Replicating Strategy (discounted case)	126
<b>5.5 Black-Scholes Model in action</b>	128
5.5.1 Price, and Time, and Volatility Dependence	128
5.5.2 American Options	129
5.5.3 Pricing Derivatives with Optimality	129
<b>5.6 Binomial Approximations</b>	<b>132</b>
5.6.1 Model Structure	132

5.6.2 Black-Scholes Option Pricing Formula	132
5.6.3 Futher Limiting Models	135
<b>5.7 Generalised Black-Scholes Model</b>	<b>136</b>
5.7.1 Model	136
5.7.2 Pricing and Hedging Contingent Claims	137
5.7.3 The Greeks	140
5.7.4 Volatility	141
<b>Appendix</b>	<b>143</b>
Projections and Conditional Expectations	
Separating Hyperplane Theorem	
Radom-Nikodým Derivatives	
Cameron-Martin-Girsanov Theorem	
Feynman-Kac Formula
