

O b s a h

Scientific Contribution of the Monograph.....	7
List of Abbreviations	9
Introduction	11
1 Theoretical Background	15
1.1 Introduction.....	15
1.2 Manufacturing systems and the process of their evolution	15
1.2.1 <i>Intelligent/flexible manufacturing systems and cells.</i> <i>A few similarities and differences</i>	<i>19</i>
1.3 Manufacturing systems design: a take on the case of F/IMS/CS	22
1.3.1 <i>The material flow design/analysis problem</i> <i>in the context of manufacturing</i>	<i>24</i>
1.3.2 <i>The layout design/analysis problem</i> <i>and its interdependence with the material flow</i> <i>in the context of manufacturing</i>	<i>26</i>
1.4 Methodologies, methods and/or approaches related to the material flow and layout design/analysis	29
1.5 Simulation and simulation optimization as key tools in the design/analysis of the material flow and layout: the witness simulation package	33
1.6 Some practical experiences in terms of the material flow design/analysis	35
2 Proposal of a Contribution Methodology for the Design and Analysis of the Material Flow and Layout in the Context of Manufacturing	37
2.1 Introduction	37
2.2 Theoretical conception of the methodology	37
2.3 Description of the contribution methodology for the design and/or analysis of the material flow	39
2.3.1 <i>Definition of the system/cell objectives.....</i>	<i>39</i>
2.3.2 <i>General description of the system/cell</i>	<i>39</i>
2.3.3 <i>Characterization of the clients of the system/cell.....</i>	<i>39</i>
2.3.4 <i>Analysis of the demand</i>	<i>40</i>
2.3.5 <i>Definition of the system/cell requirements</i> <i>and constraints.....</i>	<i>40</i>

2.3.6	<i>Analysis of possible production policies</i>	42
2.3.7	<i>Analysis of the assembly/manufacturing precedence trees for all the parts, products or families</i>	46
2.3.8	<i>Parts family and/or cell formation</i>	46
2.3.9	<i>Analysis and/or definition of scheduling alternatives</i>	47
2.3.10	<i>Analysis and/or design of the type of storage systems</i>	47
2.3.11	<i>Analysis and/or design of the type of material handling system and associated configuration decision variables</i>	47
2.3.12	<i>Analysis and/or design of the inventory system</i>	47
2.3.13	<i>Analysis and/or design of the lot size</i>	48
2.3.14	<i>Analysis and/or estimation of time standards and other metrics</i>	48
2.3.15	<i>Identification of the bottleneck. Analysis and proposal of measures</i>	48
2.3.16	<i>Analysis and/or estimation of the Wait in Process (WIP) as a key issue for defining the necessary related storage space among stations</i>	49
2.3.17	<i>Analysis and/or design of buffers</i>	49
2.3.18	<i>Analysis and/or design of the layout. Classification</i>	50
2.3.19	<i>Analysis of the combinatorial nature of the problem: determination of the "Total" Number of Permutations</i>	50
2.3.20	<i>Application of a material flow construction method (MFCM)</i>	54
2.3.21	<i>Analysis of the use of simulation</i>	54
2.3.22	<i>Modeling and simulation of the different scenarios</i>	55
2.3.23	<i>Use of the Witness optimizer (experimenter) module</i>	55
2.3.24	<i>Search of alternative solutions</i>	56
2.3.25	<i>Application of satisfaction and domination criteria</i>	56
2.3.26	<i>Analysis of the simulation results, comparison of scenarios and/or alternatives and selection of the best one(s)</i>	56
2.3.27	<i>Representation of the best MF configuration(s)</i>	56
2.3.28	<i>A few steps for the implementation</i>	57
2.3.29	<i>Continuous control and improvement</i>	57

3 A Partial Application of the Methodology to a Flexible Assembly Cell	58
3.1 Introduction.....	58
3.2 Application of the contribution methodology for the design and/or analysis of the material flow	58
3.2.1 <i>Definition of the system/cell objectives</i>	58
3.2.2 <i>General description of the system/cell</i>	58
3.2.3 <i>Definition of the system/cell requirements and constraints</i>	60
3.2.4 <i>Analysis of possible production policies</i>	61
3.2.5 <i>Analysis of the assembly/manufacturing precedence trees for all the parts, products or families</i>	61
3.2.6 <i>Parts family and/or cell formation</i>	61
3.2.7 <i>Analysis and/or definition of scheduling alternatives</i>	61
3.2.8 <i>Analysis and/or design of the type of storage systems</i>	64
3.2.9 <i>Analysis and/or design of the type of material handling system and associated configuration decision variables</i>	64
3.2.10 <i>Analysis and/or design of the inventory system</i>	64
3.2.11 <i>Analysis and/or design of the lot size</i>	65
3.2.12 <i>Analysis and/or estimation of time standards and other metrics</i>	65
3.2.13 <i>Identification of the bottleneck. Analysis and proposal of measures</i>	68
3.2.14 <i>Analysis and/or design of buffers</i>	69
3.2.15 <i>Analysis and/or design of the layout. Classification</i>	69
3.2.16 <i>Analysis of the combinatorial nature of the problem: determination of the "Total" Number of Permutations</i>	70
3.2.17 <i>Application of a material flow construction method (MFCM)</i>	71
3.2.18 <i>Analysis of the use of simulation</i>	71
3.2.19 <i>Modeling and simulation of the different scenarios</i>	71
3.2.20 <i>Use of the Witness optimizer (experimenter) module</i>	75
3.2.21 <i>A few steps for the implementation</i>	80
Summary	82
Literature	83
About the Author	91
