

## CONTENTS

1. <i>Introduction</i> . . . . .	1
2. <i>Theoretical foundations of the stability of mine openings</i> . . . . .	3
2.1 Formulation of a general solution . . . . .	3
2.2 State of stress in a point of a body . . . . .	7
2.3 State of strain in a point of a body . . . . .	12
2.4 Fundamental equation systems of the theory of continuum mechanics	17
2.4.1 Infinitesimal equilibrium equations . . . . .	17
2.4.2 Equations of the strain continuity (equations of compatibility)	19
2.4.3 Boundary conditions . . . . .	20
2.5 Solution methods of the stress and strain state in rock mechanics .	21
2.6 Conditions of plasticity and phenomenological theories of failure .	23
2.6.1 Description of the most important conditions of plasticity and failure . . . . .	26
2.7 Fundamental relations in rheology and rheological modelling . . .	30
2.7.1 Rheological theories of the limiting state . . . . .	41
2.8 Stress state in the neighbourhood of mine openings . . . . .	43
2.8.1 Primary stress state in the rock mass . . . . .	43
2.8.2 Stress state around unsupported openings . . . . .	44
3. <i>Classification of methods for computing the stability of mine openings</i>	58
3.1 Review of methods for solving problems of load acting on supports	58
3.2 Factors affecting the choice of computing methods for the load acting on supports and criteria for their selection . . . . .	65
3.2.1 Objective factors . . . . .	67
3.2.2 Subjective factors . . . . .	79
3.3 Selection of classification criteria . . . . .	83
3.4 Classification criteria of computing methods . . . . .	85
3.4.1 Condition (state) of the mining opening . . . . .	85
3.4.2 Deformational and strength manifestations in rocks. . . . .	91
3.5 Connection between the classification of computing methods and problems of critical depth of a mine working . . . . .	95
3.5.1 Formulation of the approach to the problem of critical depth	96
4. <i>Classification of computing methods</i> . . . . .	106
4.1 Arch (dome) theories I. . . . .	106
4.2 Deformational (strain) methods II. . . . .	110
4.3 Statical methods of total stability III (method of stabilizing stresses)	128

4.4	Engineering methods IV . . . . .	131
4.4.1	Empirical methods . . . . .	131
4.4.2	Empirico-analytical methods . . . . .	132
4.4.3	Probabilistic methods . . . . .	136
4.5	Concluding notes to the classification of computing methods . . . . .	139
5.	<i>Statical solutions of supporting structures</i> . . . . .	145
5.1	Review of the state of statical solution of supporting structures . . . . .	145
5.2	Statical methods of solution of statically indeterminate supporting structures . . . . .	151
5.2.1	Two-hinged arch . . . . .	151
5.2.2	Arch fixed on both ends . . . . .	153
5.2.3	Closed ring . . . . .	154
5.2.4	Two-hinged arch with passive resistance considered . . . . .	156
5.3	Statical solution of supporting structures by the deformational (strain) method . . . . .	168
5.3.1	Description of the computer program REVYZ 2 . . . . .	179
5.3.2	Example of application of the program REVYZ 2 . . . . .	185
5.4	Stress analysis of sprayed concrete (shotcrete) lining and roof/rock bolting . . . . .	187
6.	<i>Dimensioning of supporting structures</i> . . . . .	199
6.1	Peculiarities of the application of the limiting state method in calculations of supports . . . . .	199
6.2	Calculation of supports by the limiting state method . . . . .	202
6.2.1	Timber supports . . . . .	203
6.2.2	Steel support . . . . .	205
6.2.3	Concrete and reinforced-concrete supports . . . . .	206
7.	<i>Supporting structures of longitudinal mine openings</i> . . . . .	221
7.1	Fundamental types of supporting structures . . . . .	221
7.2	Timber supports . . . . .	222
7.3	Steel support . . . . .	226
7.3.1	Open shapes of steel supports . . . . .	239
7.3.2	Closed shapes of steel supports . . . . .	244
7.3.3	Steel and cast-steel plate supports (linings) . . . . .	246
7.4	Concrete and reinforced concrete lining . . . . .	248
7.4.1	Concrete and concrete-block lining . . . . .	248
7.4.2	Reinforced-concrete and steel-reinforced concrete lining . . . . .	254
7.5	Roof and rock bolting . . . . .	266
7.5.1	Mechanically clamped rock bolts . . . . .	267
7.5.2	Bonded reinforcing bolts and bars . . . . .	271
7.5.3	Application of rock/roof bolting . . . . .	279
7.5.4	Clamping forces of bolts and their bearing capacity . . . . .	281
7.6	Combined and special supports . . . . .	289

7.7 Grouting as a reinforcing element . . . . .	295
8. <i>Technology of the installation (placing) of supporting structures</i> . . .	303
8.1 Introduction . . . . .	303
8.2 Technology of the installation of frame supports . . . . .	305
8.3 Technology of the installation of planar supports (linings) . . . .	314
8.3.1 Monolithic supports (linings) . . . . .	314
8.3.2 Pre-fabricated supports (linings) . . . . .	338
8.4 Technology of roof/rock bolting . . . . .	344
8.5 Technology of injection grouting . . . . .	350
8.6 Conclusions to Chapter 8 . . . . .	353
9. <i>General conclusions</i> . . . . .	354
<i>Appendix 1.</i> . . . . .	356
<i>Appendix 2.</i> . . . . .	363
<i>References</i> . . . . .	366
<i>Index</i> . . . . .	377
