

CONTENTS

1. Making records from the lessons.....	5
2. Methods used for obtaining information in biological sciences.....	6
3. Magnifying devices (magnifying glass, light microscope, electron microscope).....	7
3.1. Magnifying glass.....	7
3.2. Light (optical) microscope.....	8
3.2.1. History of light microscopes.....	8
3.2.2. Parts of a light microscope.....	8
3.2.3. Types of light microscopes.....	14
3.3. Electron microscopes.....	17
3.3.1. Evolution of electron microscopes.....	17
3.3.2. Types of electron microscopes.....	17
3.4. Microphotography.....	19
4. Microscopic technique.....	20
4.1. Dry objectives, centring the objects, iris diaphragm function.....	20
4.2. Optical planes, measuring the size and thickness of microscopic objects.....	23
4.3. Permanent preparations.....	25
4.4. Native preparation, phase contrast.....	28
5. Prokaryotes and immersion microscopy.....	31
5.1. Prokaryotes.....	31
5.1.1. Domain Bacteria.....	31
5.1.2. Domain Archaea.....	33
5.2. Observation using immersion objective.....	34
6. Chemical composition of bioplasm.....	36
6.1. Elements.....	36
6.2. Chemical compounds.....	36
7. Non-cellular life.....	41
8. Eukaryotes.....	45
8.1. Plant cell.....	48
8.2. Animal and protozoan cells.....	49
9. Research methods in biology.....	52
9.1. Cell and tissue cultures.....	52
9.2. Molecular biology techniques.....	55
9.3. Care of laboratory animals and animal experiments.....	63
10. Transport of substances, osmosis.....	67
11. Cell growth and reproduction.....	70
11.1. Mitosis in plant cell.....	72
11.2. Mitosis in animal cell.....	73
12. Movement and irritation.....	75
12.1. Movement.....	75
12.2. Irritation.....	78
13. Reproduction and development.....	80
13.1. Development.....	82
13.2. Meiosis.....	84
13.2.1. Meiosis in humans.....	85
14. Influence of surroundings onto the bioplasm.....	90
14.1. Physical stress.....	90
14.2. Chemical stress.....	92
15. Genetics.....	94
15.1. Cytogenetics - study of chromosomes, karyotypes.....	95

15.2. Model organism - <i>Drosophila melanogaster</i>	100
15.3. Monohybridism.....	101
15.4. Dihybridism, polyhybridism and branching method	104
15.5. Polymorphic genes.....	106
15.6. Gene interactions.....	107
15.7. Inheritance and sex.....	110
15.8. Genetic linkage	112
15.9. Population genetics	114
15.10. Quantitative genetics.....	116
16. Recommended literature.....	118
