

CONTENTS

ENVIRONMENTAL HEALTH CRITERIA FOR CARBON MONOXIDE

PREAMBLE

ABBREVIATIONS

1. SUMMARY AND CONCLUSIONS	1
1.1 Chemistry and analytical methods	1
1.2 Sources and environmental levels of carbon monoxide in the environment	1
1.3 Environmental distribution and transformation	2
1.4 Population exposure to carbon monoxide	3
1.5 Toxicokinetics and mechanisms of action of carbon monoxide	5
1.6 Health effects of exposure to carbon monoxide	7
1.6.1 Cardiovascular effects	8
1.6.2 Acute pulmonary effects	11
1.6.3 Cerebrovascular and behavioural effects	11
1.6.4 Developmental toxicity	12
1.6.5 Other systemic effects	13
1.6.6 Adaptation	14
1.7 Combined exposure of carbon monoxide with altitude, drugs and other air pollutants and environmental factors	15
1.7.1 High-altitude effects	15
1.7.2 Carbon monoxide interaction with drugs	15
1.7.3 Combined exposure of carbon monoxide with other air pollutants and environmental factors	16
1.7.4 Tobacco smoke	17
1.8 Evaluation of subpopulations potentially at risk from carbon monoxide exposure	17
1.9 Carbon monoxide poisoning	18
1.10 Recommended WHO guidelines	19

2.	CHEMISTRY AND ANALYTICAL METHODS	20
2.1	Physical and chemical properties	20
2.2	Methods for measuring carbon monoxide in ambient air	20
2.2.1	Introduction	20
2.2.2	Methods	22
2.2.2.1	Non-dispersive infrared photometry method	22
2.2.2.2	Gas chromatography method	23
2.2.2.3	Other analysers	23
2.2.3	Measurement using personal monitors	25
2.2.4	Carbon monoxide detectors/alarms	25
2.3	Biological monitoring	27
2.3.1	Blood carboxyhaemoglobin measurement	27
2.3.1.1	Sample handling	30
2.3.1.2	Potential reference methods	30
2.3.1.3	Other methods of measurement	33
2.3.2	Carbon monoxide in expired breath	34
2.3.2.1	Measurement methods	36
2.3.2.2	Potential limitations	37
3.	SOURCES OF CARBON MONOXIDE IN THE ENVIRONMENT	38
3.1	Introduction	38
3.2	Principles of formation by source category	39
3.2.1	General combustion processes	49
3.2.2	Combustion engines	50
3.2.2.1	Mobile combustion engines	50
3.2.2.2	Stationary combustion sources (steam boilers)	51
3.2.3	Other sources	52
3.3	Indoor carbon monoxide	53
3.3.1	Introduction	53
3.3.2	Emissions from indoor sources	54
3.3.2.1	Gas cooking ranges, gas ovens and gas appliances	55
3.3.2.2	Unvented space heaters	56
3.3.2.3	Coal or wood stoves	57
3.3.2.4	Tobacco combustion	57

4.	ENVIRONMENTAL DISTRIBUTION AND TRANSFORMATION	59
4.1	Introduction	59
4.2	Global sources, sinks and lifetime	60
4.2.1	Sinks	60
4.2.2	Atmospheric lifetime	61
4.2.3	Latitudinal distribution of sources	62
4.2.4	Uncertainties and consistencies	63
4.3	Global distributions	65
4.3.1	Seasonal variations	66
4.3.2	Latitudinal variation	66
4.3.3	Variations with altitude	67
4.3.4	Other variations	67
4.4	Global trends	68
5.	ENVIRONMENTAL LEVELS AND PERSONAL EXPOSURES	70
5.1	Introduction	70
5.2	Population exposure to carbon monoxide	71
5.2.1	Ambient air monitoring	71
5.2.2	Approaches for estimating population exposure	73
5.2.3	Personal monitoring field studies	74
5.2.4	Carbon monoxide exposures indoors	77
5.2.5	Carbon monoxide exposures inside vehicles	80
5.2.6	Carbon monoxide exposures outdoors	83
5.3	Estimating population exposure to carbon monoxide	85
5.3.1	Components of exposure	87
5.3.2	Approaches to exposure modelling	89
5.4	Exposure measurements in populations and subpopulations	90
5.4.1	Carboxyhaemoglobin measurements in populations	90
5.4.2	Breath measurements in populations	93
5.4.3	Subject age	99
5.4.4	Pulmonary disease	99
5.4.5	Effects of smoking	100

5.5	Megacities and other major urban areas	101
5.6	Indoor concentrations and exposures	103
5.6.1	Indoor concentrations recorded in personal exposure studies	108
5.6.2	Targeted microenvironmental studies	111
5.6.2.1	Indoor microenvironmental concentrations	113
5.6.2.2	Concentrations associated with indoor sources	114
5.7	Occupational exposure	119
5.7.1	Occupational exposure limits	120
5.7.2	Exposure sources	124
5.7.3	Combined exposure to xenobiotics metabolized to carbon monoxide	125
5.7.4	Typical studies at the workplace	125
6.	TOXICOKINETICS AND METABOLISM	134
6.1	Introduction	134
6.2	Endogenous carbon monoxide production	134
6.3	Uptake of carbon monoxide and formation of carboxyhaemoglobin	136
6.4	Distribution of carbon monoxide	150
6.4.1	Intracellular effects of carbon monoxide	150
6.4.2	Carbon monoxide binding to myoglobin	153
6.4.3	Carbon monoxide uptake by cytochrome P-450	155
6.4.4	Carbon monoxide and cytochrome <i>c</i> oxidase	156
6.5	Elimination	160
7.	EFFECTS ON LABORATORY ANIMALS	162
7.1	Introduction	162
7.2	Cardiovascular system and blood	162
7.2.1	Disturbances in cardiac rhythm	163
7.2.2	Haemodynamic studies	166
7.2.3	Cardiomegaly	171
7.2.4	Haematology studies	177
7.2.5	Atherosclerosis and thrombosis	179
7.3	Respiratory system	186

7.3.1	Pulmonary morphology	186
7.3.2	Lung function	188
7.4	Central nervous system and behavioural effects	190
7.4.1	Effects on cerebral blood flow and brain metabolism	190
7.4.1.1	Effects on cerebral blood flow	190
7.4.1.2	Effects on brain metabolism	196
7.4.1.3	Evidence for a reoxygenation injury in carbon monoxide poisoning	198
7.4.2	Effects on schedule-controlled behaviour	198
7.5	Adaptation	200
7.6	Developmental toxicity	211
7.6.1	Introduction	211
7.6.2	Evidence for elevated fetal carboxyhaemoglobin relative to maternal haemoglobin	213
7.6.3	Effect of maternal carboxyhemoglobin on placental oxygen transport	220
7.6.3.1	Measurement of carboxyhaemoglobin content in fetal blood	222
7.6.4	Consequences of carbon monoxide in development	223
7.6.4.1	Fetotoxic and teratogenic consequences of prenatal carbon monoxide exposure	223
7.6.4.2	Alteration in cardiovascular development following early carbon monoxide exposure	227
7.6.4.3	Neurobehavioural consequences of perinatal carbon monoxide exposure	230
7.6.4.4	Neurochemical effects of prenatal and perinatal carbon monoxide exposure	232
7.6.4.5	Morphological consequences of acute prenatal carbon monoxide exposure	234
7.6.4.6	Neuromuscular effects of prenatal carbon monoxide exposure	234

7.6.4.7	Summary	235
7.7	Other systemic effects	235
7.8	Interactions	237
7.8.1	Combinations with psychoactive drugs	237
7.8.1.1	Alcohol	237
7.8.1.2	Barbiturates	239
7.8.1.3	Other psychoactive drugs	240
7.8.2	Combinations with other air pollutants and environmental factors	240
7.8.2.1	Other air pollutants	240
7.8.2.2	Combustion products	241
7.8.2.3	Environmental factors	245
7.8.2.4	Summary	248
8.	EFFECTS ON HUMANS	250
8.1	Healthy subjects	250
8.1.1	Introduction	250
8.1.2	Acute pulmonary effects of carbon monoxide	250
8.1.2.1	Effects on lung morphology	250
8.1.2.2	Effects on lung function	251
8.1.3	Cardiovascular and respiratory response to exercise	256
8.1.4	Behavioural changes and work performance	259
8.1.4.1	Introduction	259
8.1.4.2	Sensory effects	259
8.1.4.3	Motor and sensorimotor performance	263
8.1.4.4	Vigilance	266
8.1.4.5	Miscellaneous measures of performance	267
8.1.4.6	Automobile driving	270
8.1.4.7	Brain electrical activity	270
8.1.5	Adaptation	272
8.1.5.1	Short-term habituation	273
8.1.5.2	Long-term adaptation	273
8.1.6	Carbon monoxide interactions with drugs	274

8.1.7	Combined exposure to carbon monoxide and other air pollutants and environmental factors	275
8.1.7.1	Exposure to other pollutants in ambient air	276
8.1.7.2	Exposure to other environmental factors	277
8.1.8	Exposure to tobacco smoke	278
8.1.8.1	Environmental tobacco smoke	278
8.1.8.2	Mainstream tobacco smoke	279
8.2	High-risk groups	280
8.2.1	Effects in individuals with heart disease	280
8.2.2	Effects in individuals with chronic obstructive lung disease	293
8.2.3	Effects in individuals with chronic anaemia	294
8.2.4	Arrhythmogenic effects	295
8.2.5	Effects on coronary blood flow	298
8.2.6	Relationship between carbon monoxide exposure and risk of cardiovascular disease in humans	299
8.2.6.1	Introduction	299
8.2.6.2	Daily mortality	299
8.2.6.3	Hospital admissions	302
8.2.6.4	Occupational exposures	305
8.2.6.5	Carbon monoxide poisoning	307
8.2.6.6	Tobacco smoke	308
8.2.7	Effects of exposure during pregnancy and early childhood	310
8.2.7.1	Pregnancy	310
8.2.7.2	Reduced birth weight	315
8.2.7.3	Sudden infant death syndrome	316
8.2.7.4	Neurobehavioural effects	317
8.2.8	High-altitude effects	319
8.2.8.1	Introduction	319
8.2.8.2	Carboxyhaemoglobin formation	321
8.2.8.3	Cardiovascular effects	321
8.2.8.4	Neurobehavioural effects	325
8.2.8.5	Compartmental shifts	327
8.3	Carbon monoxide poisoning	327

9.	EVALUATION OF HEALTH RISKS	335
9.1	Introduction	335
9.2	Age, gender and pregnancy as risk factors	336
9.3	Risk of carbon monoxide exposure in individuals with pre-existing disease	337
9.3.1	Subjects with coronary artery disease	337
9.3.2	Subjects with congestive heart failure	339
9.3.3	Subjects with other vascular diseases	340
9.3.4	Subjects with anaemia and other haematological disorders	340
9.3.5	Subjects with obstructive lung disease	341
9.4	Subpopulations at risk from combined exposure to carbon monoxide and other chemical substances	341
9.4.1	Interactions with drugs	341
9.4.2	Interactions with other chemical substances in the environment	342
9.5	Subpopulations exposed to carbon monoxide at high altitudes	342
9.6	Carbon monoxide poisoning	343
9.7	Recommended guideline values	344
9.7.1	Environmental sources	344
9.7.2	Environmental concentrations	344
9.7.3	Carboxyhaemoglobin concentrations in the population	345
9.7.4	General population exposure	346
9.7.5	Working population exposure	347
9.7.6	Derived guideline values for carbon monoxide concentrations in ambient air	347
9.8	Recommendations	348
9.8.1	Further research	348
9.8.2	Protection of human health	349
