

Web Cartography

THE WORLD WIDE WEB HAS RAPIDLY BECOME A WIDESPREAD MEANS FOR THE PUBLICATION OF GEOSPATIAL DATA. IT HAS EARNED THIS POPULARITY SINCE IT IS VIRTUALLY PLATFORM-INDEPENDENT, CAN REACH MANY USERS AT MINIMAL COST, AND IS EASY TO UPDATE. MORE IMPORTANTLY, THE WEB MEETS THE INCREASING DEMAND FOR CUSTOMISED GEOSPATIAL DATA PRODUCTS. HOWEVER, THE VISUAL DISSEMINATION OF SPATIAL DATA ON THE WEB CREATES SPECIAL REQUIREMENTS FOR MAP DESIGN, AND INTRODUCES NEW CAPABILITIES AND PITFALLS FOR INTERACTIVE MAP APPLICATIONS.

Web maps are first put into a broad context, and specific characteristics of these maps are then examined from a user perspective. The various functions of maps on the Web are discussed, in the context of the technical background and fundamental user questions such as what can be done with existing data. Web cartography also provides insight into the particularities of multi-dimensional web maps. Typical characteristics are explained clearly from the perspectives of static viewing and dynamic viewing. For each category, design considerations, based on cartographic principles, are discussed. Topics addressed include map contents, map physics, and the map environment. Technical terms are explained where necessary. For several time-sensitive topics such as traffic, weather and tourism, the status and future of web maps are discussed. Atlases and national mapping agencies are also covered.

The website [HTTP://KARTOWEB.ITC.NL](http://KARTOWEB.ITC.NL) /WEBCARTOGRAPHY/WEBBOOK accompanies the book. It provides a dynamic environment for demonstrating many of the principles set out in the text and includes access to a basic course on Web Cartography. The book and website provide a text for students and professionals in the fields of cartography and GIS. The series of chapters are written by different people but worked together into a single text.

MENNO-JAN KRAAK and **ALIAN BROWN** are professor and lecturer, respectively, in the Division of Geoinformatics, Cartography and Visualisation at ITC, Enschede, The Netherlands

Contents

Preface.....	viii
1 Settings and needs for web cartography (Menno-Jan Kraak)	1
1.1 New mapping environments	1
1.2 Types of web maps	3
1.3 What is special about web maps?	4
1.4 This book and its website	6
2 Trends in cartography (Menno-Jan Kraak)	9
2.1 Visualisation process: cartographic principles	9
2.2 Visualisation strategies: mapping for public communication and mapping to stimulate visual thinking	11
2.3 New cartographic realms: mapping cyberspace	15
3 Use of maps on the Web (Corné P.J.M. van Elzakker)	21
3.1 Introduction	21
3.2 What's the use of web maps?	22
3.3 Modes of using web maps	25
3.4 finding and retrieving maps and geodata on the Web	28
3.5 Web maps in geospatial data infrastructures	31
4 Users of maps on the Web (Corné P.J.M. van Elzakker).....	37
4.1 User profiles	37
4.2 How many web maps and web map users?	42
4.3 Economic aspects	43
4.4 Problems and limitations	47
5 Cartographic principles (Menno-Jan Kraak)	53
5.1 Visualising geospatial data	53
5.2 Cartographic information analysis	57

5.3 The cartographic sign system	59
5.4 Multi-dimensional display	66
6 Publishing maps on the Web (Barend Köbben).....	73
6.1 Introduction	73
6.2 Internet and the World Wide Web	73
6.3 Basic publishing on the Web	76
6.4 Extending web map functionality	79
7 Web map design in practice (Jeroen van den Worm).....	87
7.1 Introduction	87
7.2 Factors influencing map design	87
7.3 Cartographic symbol design for web maps	96
7.4 Colour on web maps	100
7.5 Type fonts and name placement on web maps	101
7.6 Advanced design	103
8 Web maps and National Mapping Organisations (Rob M. Hootsmans).....	109
8.1 The changing environment of national mapping organizations	109
8.2 Why Web maps for NMOs?	111
8.3 Current NMO activities on the Web	116
8.4 Recommendations.....	119
9 Web maps and tourists (Allan Brown).....	123
9.1 Tourist information on the Web.....	123
9.2 Examples of official and commercial websites.....	123
9.3 More advanced cartographic techniques.....	125
9.4 Downloading and printing high quality tourist maps.....	129
9.5 Future prospects.....	131
10 Web maps and atlases (Menno-Jan Kraak)	135
10.1 Atlas concepts.....	135
10.2 Web atlases	137

11 Web maps and weather (Connie Blok)	141
11.1 Introduction	141
11.2 The medium: television or the Web.....	143
11.3 Weather maps on the Web	145
11.4 Expectations and hopes.....	153
12 Web maps and road traffic (Nicoline N.M.Emmer).....	159
12.1 Introduction	159
12.2 Why use traffic web maps?.....	159
12.3 Current dissemination of traffic information	160
12.4 Improvements of traffic sites	165
12.5 Future developments.....	168
13 Outlook (Menno-Jan Kraak and Allan Brown).....	171
Appendix A File formats and plugins (Wim Feringa).....	177
A.1 Introduction.....	177
A.2 Coding / authoring	177
A.3 Graphics.....	181
A.4 Animation	184
A.5 Video.....	185
A.6 Sound	187
A.7 Synchronised multimedia.....	189
Appendix B Design, colour, images,fonts, file size (Wim Feringa)	195
B.1 Website design	195
B.2 Internet colour	201
B.3 Image formats and file size	204
B.4 Fonts.....	205
Index.....	211
