List of authors	vi
Preface	vii
1. Methodology of Ontology Building	1
1.1 Introduction	1
1.2 The ontology concept in the computer science context and its definitions	1
1.3 Ontology content	3
1.4 Methodology of ontology building	5
1.5 Conclusion	9
2. Semantic Annotation – Support for Geodata Harmonization And Integration	11
2.1 Introduction	11
2.2 Semantic issues and ontology	12
2.3 Data source ontology vs. database schema	15
2.4 Case studies	16
2.5 Conclusion	21
3. A simplified geometric and topological modelling of 3D buildings enriched by semantic data: combination of surface-based and solid-based representations	25
3.1 Introduction	25
3.2 Related work	25
3.3 Proposed model	30
3.4 Experimentation and results	38
3.5 Conclusion and future work	40
4. GDMS-R: A mixed SQL to manage raster and vector data	43
4.1 Introduction	43
4.2 Related work	44
4.3 Map Algebra and GDMS concepts	45
4.4 Implementation details	47
4.5 Example case study	49
4.6 Conclusion and future works	54
4.7 Availability	54
5. Terrain skeleton and local morphometric variables: geosciences and computer vision technique	57
5.1 Introduction	57
5.2 Brief history of specific lines detection	57
5.3 Singular points of the surface and local morphometric variables	59
5.4 Ridge and edge detection	66
5.5 Approximation of partial derivatives of the third order	72
5.6 Conclusion	73
6. Remote sensing and GIS in geocological research: a case study from Malá Fatra Mts., Slovakia	77
6.1 Introduction	77
6.2 Methods	78
6.3 Results	80
6.4 Discussion	87

6.5	Conclusion	8
7.	Monitoring of Deformations in North-Bohemian Coal Basin by Permanent Scatterer Technique	
7.1	Introduction	8
7.2	InSAR overview	8
7.3	Permanent Scatterer technique	9
7.4	Data sets	9
7.5	Results	9
7.6	Corner reflectors	9
7.7	Conclusions	9
8.	Spatial Continuity of Selected Labour Market Indicators	
8.1	Introduction	9
8.2	Global indicators of spatial association	9
8.3	Local indicators of spatial association	9
8.4	Case study: a Labour market in the Czech Republic	10
8.5	Results of local analysis	10
8.6	Conclusion	11
9.	The Geographical and Temporal Balance of Czech TV CT24 News	
9.1	Introduction	11
9.2	Principles of geocoding and geoparsing	11
9.3	RSS channel	11
9.4	Reference data	11
9.5	Recording and geocoding of media news	11
9.6	Quality assessment	11
9.7	Mapping a news' distribution	11
9.8	Temporal distribution	11
9.9	Conclusion	11
10.	Application of Wireless Sensor Networks with GIS on the Soil Moisture Distribution Mapping	
10.1	Introduction	11
10.2	Wireless Sensor Networks (WSN)	11
10.3	Application of WSN for Agricultural Studies	11
10.4	Integration of WSN and GIS for Agricultural Fields	11
10.5	Results and Recommendations	11
11.	Using of Mobile Device Localization in Mobile Information Systems by Utilization of All Types of Wireless Technologies	
11.1	Introduction	11
11.2	The PDPT Framework and PDPT Core	11
11.3	Experiments	11
11.4	Conclusions	11
12.	Geolocation possibilities of web pages visitors	
12.1	Introduction	11
12.2	Web analytics	11
12.3	Geolocation	11
12.4	Geolocation techniques	11
12.5	Geolocation visualisation	11

12.6	Conclusion	156
13.	Orchestration on GeoWeb Platform	159
13.1	Introduction	159
13.2	Orchestration	159
13.3	Methodology for GeoWeb orchestration	163
13.4	Problematic areas	165
13.5	Conclusion	165
	Index	169
	About authors	173
