Keynotes 1

Tutorials 2

Oral Session 1: Time-Frequency Representation of Audio Signals

Real-Time Audio Visualization With Reassigned Non-uniform Filter Banks
Zdeněk Průša and Nicki Holighaus 3

Estimates of the Reconstruction Error in Partially Redressed Warped Frames Expansions
Thomas Mejstrik and Gianpaolo Evangelista 9

Real-Time Spectrogram Inversion Using Phase Gradient Heap Integration
Zdeněk Průša and Peter Søndergaard 17

Modifying Signals in Transform Domain: a Frame-Based Inverse Problem
Roswitha Bammer and Monika Dörfler 23

Oral Session 2: Virtual Analog

Time-Variant Gray-Box Modeling of a Phaser Pedal
Roope Kiiski, Fabian Esqueda and Vesa Välimäki 31

Black-box Modeling of Distortion Circuits with Block-Oriented Models
Felix Eichas and Udo Zölzer 39

Physical Model Parameter Optimisation for Calibrated Emulation of the Dallas Rangemaster Treble Booster Guitar Pedal
Ben Holmes and Maarten van Walstijn 47

Circuit Simulation with Inductors and Transformers Based on the Jiles-Atherton Model of Magnetization
Martin Holters and Udo Zölzer 55

Poster Session 1

A Cosine-Distance Based Neural Network for Music Artist Recognition Using Raw I-Vector Feature
Hamid Eghbal-Zadeh, Matthias Dorfer and Gerhard Widmer 61

Hubness-Aware Outlier Detection for Music Genre Recognition
Arthur Flexer 69

Separating Piano Recordings into Note Events Using a Parametric Imitation Approach
Xue Wen 77

Assessing The Suitability of the Magnitude Slope Deviation Detection Criterion for Use In Automatic Acoustic Feedback Control
Marc C. Green, John Szymanski and Matt Speed 85

A Robust Stochastic Approximation Method for Crosstalk Cancellation
Huaxing Xu, Risheng Xia, Junfeng Li and Yonghong Yan 93

Simulation of Analog Flanger Effect Using BBD Circuit
Jaromír Mačák 99

Audio Nonlinear Modeling through Hyperbolic Tangent Functionals
Adalberto Schuck Jr. and Bardo Ernst Josef Bodmann 103

Oral Session 3: Signal Processing

Signal-Matched Power-Complementary Cross-Fading and Dry-Wet Mixing
Marco Fink, Martin Holters and Udo Zölzer 109

Time-Domain Implementation of a Stereo to Surround Sound Upmix Algorithm
Sebastian Kraft and Udo Zölzer 113

Rounding Corners with BLAMP
Fabián Esqueda, Vesa Välimäki and Stefan Bilbao 121

Oral Session 4: Sound Synthesis I

Synthesis of Sound Textures with Tonal Components Using Summary Statistics and All-Pole Residual Modeling
Hyung-Suk Kim and Julius O. Smith 129

Reducing the Aliasing of Nonlinear Waveshaping Using Continuous-Time Convolution
Julian D. Parker, Vadim Zavalishin and Efflam Le Bivic 137

Sound Morphing by Audio Descriptors and Parameter Interpolation
Savvas Kazazis, Philippe Depalle and Stephen McAdams 145

Real-Time Force-Based Sound Synthesis Using GPU Parallel Computing
Ryoho Kobayashi 153

Oral Session 5: Sound Synthesis II

A Physical String Model with Adjustable Boundary Conditions
Maximilian Schäfer, Petr Frenštátský and Rudolf Rabenstein 159

A Modal Approach to the Numerical Simulation of a String Vibrating against an Obstacle: Applications to Sound Synthesis
Clara Issanchou, Jean-Loic Le Carrou, Stefan Bilbao, Cyril Touzé, Olivier Doaré 167

A Real-Time Synthesis Oriented Tanpura Model
Maarten van Walstijn, Jamie Bridges and Sandor Mehes 175

Assessing Applause Density Perception Using Synthesized Layered Applause Signals
Alexander Adami, Sascha Disch, Garri Steba and Jürgen Herre 183

Poster Session 2

Time Domain Aspects of Artifact Reduction in Positioning Algorithm using Differential Head-Related Transfer Function
Dominik Štorek 191

Detection of Clicks in Analog Records Using Peripheral-Ear Model
František Rund, Václav Vencovský and Jaroslav Bouše 195

Perceptual Audio Source Culling for Virtual Environments
Ali Can Metan and Hüseyin Hacihabiboğlu 201

Automatic Violin Synthesis Using Expressive Musical Term Features
Chih-Hong Yang, Pei-Ching Li, Alvin W. Y. Su, Li Su and Yi-Hsuan Yang 209

Concatenative Sound Texture Synthesis Methods and Evaluation
Diemo Schwarz, Axel Roebel, Chunghsin Yeh and Amaury LaBurthe 217

Signal Decorrelation using Perceptually Informed Allpass Filters
Elliot Kermit-Canfield and Jonathan Abel 225

Complexity Scaling of Audio Algorithms: Parametrizing the MPEG Advanced Audio Coding Rate-Distortion Loop
Pablo Delgado and Markus Lohwasser 233

Oral Session 6: Audio and Music Analysis

Non-Linear Identification of an Electric Guitar Pickup
Antonin Novak, Leo Guadagnin, Bertrand Lihoreau, Pierrick Lotton, Emmanuel Brasseur and Laurent Simon 241

Monophonic Pitch Detection by Evaluation of Individually Parameterized Phase Locked Loops
Johannes Böhler and Udo Zölzer 247

Piecewise Derivative Estimation of Time-Varying Sinusoids as Spline Exponential Functions
Xue Wen 255

Oral Session 7: Wave Digital Filters

The Fender Bassman 5F6-A Family of Preamplifier Circuits—A Wave Digital Filter Case Study
W. Ross Dunkel, Maximilian Rest, Kurt James Werner, Michael Jørgen Olsen and Julius O. Smith 263

A Computational Model of the Hammond Organ Vibrato/Chorus using Wave Digital Filters
Kurt James Werner, W. Ross Dunkel and François Germain 271

Resolving Grouped Nonlinearities in Wave Digital Filters using Iterative Techniques
Michael Jørgen Olsen, Kurt James Werner and Julius O. Smith 279

RT-WDF — A Modular Wave Digital Filter Library with Support for Arbitrary Topologies and Multiple Nonlinearities
Maximilian Rest, W. Ross Dunkel, Kurt James Werner and Julius O. Smith 287

Oral Session 8: Spatial Audio

Directivity Patterns Controlling the Auditory Source Distance
Florian Wendt, Matthias Frank, Franz Zotter and Robert Höldrich 295

Auditory Perception of Spatial Extent in the Horizontal and Vertical Plane
Marian Weger, Georgios Marentakis and Robert Höldrich 301

Model-Based Obstacle Sonification for the Navigation of Visually Impaired Persons
Simone Spagnol, Omar I. Johannesson, Arni Kristjansson, Runar Unnthorsson, Charalampos Saitis, Kyriaki Kalimeri, Michal Bujacz and Alin Moldoveanu 309
