CONTENTS

Chapter 1 Introduction **1**

Learning Objectives 1
The Role of GIS Modeling 1
Realizing GIS Capabilities 3
Understanding the Modeling Process 4
Why Raster GIS Modeling? 5
What This Book is About 6
Chapter Review 7
Discussion Topics 8
Learning Activities 9

Chapter 2 Nature of the Data **10**

Learning Objectives 10
Introduction to Raster Tessellations 11
Raster Data Models 15
  Simple Raster 16
  Extended Raster 18
  Quadtrees 19
  Cellular Automata 19
Advantages and Disadvantages of the Raster Approach 20
Sources of Data 23
Selecting Properties: Grid Size, Study Area, Data Format, Projection, and Grid System 26
Dealing with the Error Component in Raster Data 28
Temporality in Spatial Data 30
Chapter Review 31
Discussion Topics 32
Learning Activities 33

Chapter 3 Map Algebra **35**

Learning Objectives 35
Conceptualizing Zero- Through Two-Dimensional Space with Grid Cells 36
Conceptualizing Three-Dimensional Space with Grid Cells 42
Thinking About the Mathematics of Maps 43
A Comparison with and Contrast to Matrix Algebra 43
An Introduction To Manipulations with Map Algebra 44
  Operators 45
Functions 52
Flow Control 53
  Statements 53
Iteration 55
Chapter Review 55
Discussion Topics 56
Learning Activities 57

Chapter 4 Characterizing the Functional Operations 58

Learning Objectives 58
Function Review 58
Local Functions 59
Focal Functions 64
Zonal Functions 68
Bock Functions 70
Global Functions 71
Going Beyond Map Algebra 90
Chapter Review 90
Discussion Topics 91
Learning Activities 92

Chapter 5 Modeling Essentials 94

Learning Objectives 94
Thinking Spatially 95
Visible Patterns 98
Functional Patterns 104
Tools For Identifying Patterns 108
The Landscape 108
Literature Survey 108
Knowledge Engineering (Repertory Grid) 109
Maps 109
Aerial Photography 110
Satellite Imagery 111
Statistical Techniques 111
Recognizing the Spatial Interactions of the Problem:
From Pattern to Process 112
Types of GIS Models 113
Introduction 113
Models Based on Purpose 114
Models Based on Methodology 117
Models Based on Logic 117
Chapter Review 118
Discussion Topics 118
Learning Activities 119

Chapter 6 Conceptualizing the Model 121

Learning Objectives 121
Introduction 121
Defining Your Goals 122
Hierarchical Compartmentalization 130
Adding the Spatial Dimension 132
Identifying Possible Data Elements 135
Chapter Review 136
Discussion Topics 137
Learning Activities 138

Chapter 7 Model Formulation, Flowcharting, and Implementation 140

Learning Objectives 140
Making Sense of the Conceptual Model 141
Examining the Flowcharting Programs 142

Giving the Compartments Grids 143
Linking the Compartments 146
Identifying Missing/Redundant/Confused Themes in Flowcharts 148
Adding Data Surrogates and Aspatial Operators 149
Implementation 150
Reversing a Flowchart (Running the Model) 150
Iteration (Refining the Model/ Adding Intermediate Themes) 150
Model Hierarchy (Compartmental Implementation) 151
A Binary Maps Approach (Dealing with Complexity) 151
Recordkeeping (Maintaining Intermediate Grids) 152
Documenting Our Work Beyond the Flowchart (Metadata) 154
Producing Effective Results (Tightening and Loosening Constraints) 155
Chapter Review 156
Discussion Topics 157
Learning Activities 161

Chapter 8 Conflict Resolution and Prescriptive Modeling 162

Learning Objectives 162
Introduction 163
Spatial Conflicts 163
Generating Alternatives 165
The Orpheus Land Use Allocation Model 165
Descriptive Component 166
Prescriptive Component 167
Consensus Building 168
Hierarchical Techniques 168
Statistical Techniques: Content Analysis 169
Displaced Fuzzy Ideal 170
Chapter Review 171
Discussion Topics 171
Learning Activities 172

Chapter 9 Model Verification, Validation, and Acceptability 175

Learning Objectives 175
Introduction 176
Definition of Terms 176
Model Correctness 177
Verification 177
Model Validity 181
Parsimony 184
Importance of Parsimony 184
Ways of Measuring Parsimony 185
Model Acceptance 186
Chapter Review 188
Discussion Topics 189
Learning Activities 189
