1	User's Manual	1
1.1	Expectations	2
1.2	Prerequisites and Further Reading	3
1.3	Styles and Fonts	4
1.4	An Introduction to R	5
1.4.1	Getting Started	6
1.4.2	R Objects	8
1.4.3	Probability Distributions in R	15
1.4.4	Graphical Facilities	16
1.4.5	Writing New R Functions	19
1.4.6	Input and Output in R	21
1.4.7	Administration of R Objects	21
1.5	The bayess Package	22
2	Normal Models	25
2.1	Normal Modeling	26
2.2	The Bayesian Toolkit	28
2.2.1	Posterior Distribution	28
2.2.2	Bayesian Estimates	33
2.2.3	Conjugate Prior Distributions	34
2.2.4	Noninformative Priors	35
2.2.5	Bayesian Credible Intervals	37
2.3	Bayesian Model Choice	38
2.3.1	The Model Index as a Parameter	39
2.3.2	The Bayes Factor	41
2.3.3	The Ban on Improper Priors	43
2.4	Monte Carlo Methods	46
2.4.1	An Approximation Based on Simulations	47
2.4.2	Importance Sampling	49
2.4.3	Approximation of Bayes Factors	52

2.5	Outlier Detection	58
2.6	Exercises	61
3	Regression and Variable Selection	65
3.1	Linear Models	66
3.2	Classical Least Squares Estimator	69
3.3	The Jeffreys Prior Analysis	73
3.4	Zellner's G -Prior Analysis	74
3.4.1	A Semi-noninformative Solution	75
3.4.2	The BayesReg R Function	80
3.4.3	Bayes Factors and Model Comparison	81
3.4.4	Prediction	84
3.5	Markov Chain Monte Carlo Methods	85
3.5.1	Conditionals	86
3.5.2	Two-Stage Gibbs Sampler	87
3.5.3	The General Gibbs Sampler	90
3.6	Variable Selection	91
3.6.1	Deciding on Explanatory Variables	91
3.6.2	G -Prior Distributions for Model Choice	93
3.6.3	A Stochastic Search for the Most Likely Model	96
3.7	Exercises	98
4	Generalized Linear Models	103
4.1	A Generalization of the Linear Model	104
4.1.1	Motivation	104
4.1.2	Link Functions	106
4.2	Metropolis Hastings Algorithms	108
4.2.1	Definition	109
4.2.2	The Independence Sampler	110
4.2.3	The Random Walk Sampler	111
4.2.4	Output Analysis and Proposal Design	111
4.3	The Probit Model	115
4.3.1	Flat Prior	115
4.3.2	Noninformative G -Priors	117
4.3.3	About Informative Prior Analyses	122
4.4	The Logit Model	124
4.5	Log-Linear Models	127
4.5.1	Contingency Tables	127
4.5.2	Inference Under a Flat Prior	131
4.5.3	Model Choice and Significance of the Parameters	133
4.6	Exercises	137

5	Capture–Recapture Experiments	139
5.1	Inference in a Finite Population	140
5.2	Sampling Models	142
5.2.1	The Binomial Capture Model	142
5.2.2	The Two-Stage Capture–Recapture Model	143
5.2.3	The T -Stage Capture–Recapture Model	148
5.3	Open Populations	152
5.4	Accept–Reject Algorithms	156
5.5	The Arnason–Schwarz Capture–Recapture Model	160
5.5.1	Modeling	161
5.5.2	Gibbs Sampler	165
5.6	Exercises	168
6	Mixture Models	173
6.1	Missing Variable Models	174
6.2	Finite Mixture Models	176
6.3	Mixture Likelihoods and Posteriors	177
6.4	MCMC Solutions	182
6.5	Label Switching Difficulty	192
6.6	Prior Selection	198
6.7	Tempering	199
6.8	Mixtures with an Unknown Number of Components	201
6.9	Exercises	206
7	Time Series	209
7.1	Time-Indexed Data	210
7.1.1	Setting	210
7.1.2	Stability of Time Series	212
7.2	Autoregressive (AR) Models	214
7.2.1	The Models	215
7.2.2	Exploring the Parameter Space by MCMC Algorithms	219
7.3	Moving Average (MA) Models	226
7.4	ARMA Models and Other Extensions	232
7.5	Hidden Markov Models	236
7.5.1	Basics	237
7.5.2	Forward–Backward Representation	241
7.6	Exercises	248
8	Image Analysis	251
8.1	Image Analysis as a Statistical Problem	252
8.2	Spatial Dependence	252
8.2.1	Grids and Lattices	252
8.2.2	Markov Random Fields	254
8.2.3	The Ising Model	256
8.2.4	The Potts Model	260

8.3	Handling the Normalizing Constant	262
8.3.1	Path Sampling	264
8.3.2	The ABC Method	267
8.3.3	Inference on Potts Models	270
8.4	Image Segmentation	273
8.5	Exercises	281
