1	Introduction to the recycling of construction and demolition waste (CDW) F. PACHECO-TORGAL, University of Minho, Portugal	1
1.1	Introduction	1
1.2	EU 70% recycling target for 2020	2
1.3	Outline of the book	3
1.4	References	5
Part I	Managing construction and demolition waste	7
2	Improving waste management plans in construction projects V. W. Y. TAM, University of Western Sydney, Australia	9
2.1	Introduction	9
2.2	Existing waste management planning (WMP) measures and methods of control	10
2.3	Assessing the effectiveness of WMP methodology	14
2.4	Conclusions	21
2.5	Acknowledgement	22
2.6	References	22
3	Methods for estimating construction and demolition (C&D) waste C. LLATAS, University of Seville, Spain	25
3.1	Introduction	25
3.2	Definitions and documents	26

vi	Contents	
3.3	Sources of construction and demolition (C&D) waste	29
3.4	Composition of C&D waste	30
3.5	Quantification of C&D waste studies	33
3.6	Estimate procedures and case studies	38
3.7	Future trends	46
3.8	Sources of further information and advice	47
3.9	References	49
4	Waste management plants and technology for recycling construction and demolition (C&D) waste: state-of-the-art and future challenges M. HIETE, University of Kassel, Germany	53
4.1	Introduction	53
4.2	Types of waste management plants	57
4.3	Environmental and health aspects	62
4.4	Construction and demolition (C&D) waste management plants in the waste chain: a systems perspective	65
4.5	Conclusions and future trends	68
4.6	Sources of further information and advice	70
4.7	References	71
5	Multi-criteria decision-making methods for the optimal location of construction and demolition waste (C&DW) recycling facilities E. DOSAL, J. R. VIGURI and A. ANDRÉS, University of Cantabria, Spain	76
5.1	Introduction	76
5.2	Decision-making tools: site selection	78
5.3	Multi-Criteria Analysis (MCA): an overview	80
5.4	MCA-based methodology for site selection of construction and demolition waste (C&DW) recycling facilities	86
5.5	A case study: Cantabria, northern Spain	89
5.6	Conclusions	100
5.7	Acknowledgements	101
5.8	References	101
6	The economics of construction and demolition waste (C&DW) management facilities E. GARBARINO, Provincia di Torino, Italy and G. A. BLENGINI, Politecnico di Torino, Italy	108
6.1	Introduction	108
6.2	Drivers and constraints for the development of the recycling sector	114
6.3	Cost factors of construction and demolition waste (C&DW) recycling	121

6.4	Cost factors of the end-of-waste criteria implementation	133
6.5	Future trends	135
6.6	Acknowledgement	136
6.7	References	136
Part II	Processing and properties of recycled aggregates from construction and demolition waste	139
7	Conventional demolition versus deconstruction techniques in managing construction and demolition waste (CDW) A. COELHO and J. DE BRITO, Technical University of Lisbon, Portugal	141
7.1	Introduction	141
7.2	Technological aspects of demolition	143
7.3	Technological aspects of deconstruction	146
7.4	Demolition versus deconstruction: economic analysis	150
7.5	Demolition versus deconstruction: environmental analysis	173
7.6	Conclusions	181
7.7	Future trends	182
7.8	References	183
8	Demolition techniques and production of construction and demolition waste (CDW) for recycling P. KAMRATH, Paul Kamrath Ingenieurrückbau GmbH, Germany	186
8.1	Introduction	186
8.2	End-of-life scenarios for buildings	187
8.3	Planning demolition	188
8.4	Demolition technologies	192
8.5	Top-down and other demolition methods	199
8.6	Types and handling of demolition waste	205
8.7	Conclusions	207
8.8	References	208
9	Preparation of concrete aggregates from construction and demolition waste (CDW) A. COELHO and J. DE BRITO, Technical University of Lisbon, Portugal	210
9.1	Introduction	210
9.2	Technological aspects of concrete recycling	212
9.3	Uses of recycled construction and demolition waste (CDW) materials	228
9.4	Economic aspects of recycled aggregate for concrete	230
9.5	Environmental aspects of recycled aggregate for concrete	235

9.6	Conclusions and future trends	241
9.7	References	242
10	Separation processes to improve the quality of recycled concrete aggregates (RCAs) A. AKBARNEZHAD, The University of New South Wales, Australia and K. C. G. ONG, National University of Singapore, Singapore	246
10.1	Introduction	246
10.2	Recycled concrete aggregates (RCAs): properties and mortar content	247
10.3	Beneficiation of RCAs: innovative methods	251
10.4	Effects of RCA beneficiation on the mechanical properties of recycled aggregate concrete (RAC)	263
10.5	Economic and environmental assessment of RCA beneficiation	265
10.6	References	268
11	Quality control of recycled aggregates (RAs) from construction and demolition waste (CDW) M. MARTÍN-MORALES, M. ZAMORANO, I. VALVERDE-PALACIOS, G. M. CUENCA-MOYANO and Z. SÁNCHEZ-ROLDÁN, University of Granada, Spain	270
11.1	Introduction	270
11.2	Composition and classification of recycled aggregates (RAs)	271
11.3	Quality criteria for the use of RAs	274
11.4	Guidelines for measuring quality parameters of RAs	286
11.5	Parameters affecting compliance with quality criteria	294
11.6	Conclusions	296
11.7	Sources of further information and advice	297
11.8	References	298
12	Properties of concrete with recycled aggregates F. AGRELA, University of Córdoba, Spain and P. ALAEJOS and M. S. DE JUAN, Laboratory of Materials and Structures (CEDEX), Spain	304
12.1	Introduction	304
12.2	Properties of fresh concrete using recycled aggregates	305
12.3	Properties of hardened concrete using recycled aggregates	310
12.4	Summary: using recycled aggregates successfully in concrete	323
12.5	References	327

13	Strength and durability of concrete using recycled aggregates (RAs) A. E. RICHARDSON, Northumbria University, UK	330
13.1	Introduction: using recycled aggregates (RAs) in concrete	330
13.2	Factors affecting the durability of concrete	334
13.3	Strength and durability of concrete using RAs	341
13.4	Conclusions	346
13.5	References	347
Part III	Applications of recycled aggregates from construction and demolition waste	349
14	Recycled aggregates (RAs) for roads J. R. JIMÉNEZ, University of Córdoba, Spain	351
14.1	Introduction	351
14.2	Physico-mechanical characterisation of recycled aggregates (RAs) for roads	352
14.3	Chemical characterisation of RAs for road construction	360
14.4	RAs from construction and demolition waste (CDW) in pavement sections	362
14.5	Assessing the use of RAs in practice	370
14.6	Environmental performance	373
14.7	Conclusions and future trends	375
14.8	References	376
15	Recycled aggregates (RAs) for asphalt materials B. GÓMEZ-MEIJIDE and I. PÉREZ, Universidade da Coruña, Spain	378
15.1	Introduction	378
15.2	Volumetric properties	379
15.3	Rutting	380
15.4	Stiffness	383
15.5	Fatigue	386
15.6	Stripping and durability	387
15.7	Conclusions	390
15.8	Acknowledgements	391
15.9	References	391
16	Recycled asphalt (RA) for pavements A. TABAKOVIĆ, University College Dublin, Ireland	394
16.1	Introduction	394
16.2	The recycling process for recycled asphalt (RA)	395

16.3	Assessment of the properties of RA	403
16.4	Designing a pavement mix containing RA	412
16.5	Testing the mechanical properties of designed mixtures	415
16.6	Future trends	418
16.7	References	419
17	The suitability of concrete using recycled aggregates (RAs) for high-performance concrete (HPC) F. PACHECO-TORGAL, University of Minho, Portugal, Y. DING, Dalian University of Technology, China, S. MIRALDO, University of Aveiro, Portugal, Z. ABDOLLAHNEJAD, University of Minho, Portugal and J. A. LABRINCHA, University of Aveiro & CICECO, Portugal	424
17.1	Introduction	424
17.2	High performance concrete (HPC) with recycled aggregates (RAs): an overview	426
17.3	Applications of HPC using RAs	430
17.4	References	434
18	Use of construction and demolition waste (CDW) for alkali-activated or geopolymer cements A. ALLAHVERDI, Iran University of Science and Technology, Iran and E. NAJAFI KANI, Semnan University, Iran	439
18.1	Introduction	439
18.2	The development of alkali-activated or geopolymer cements	440
18.3	Mechanisms of alkali activation and properties of alkali-activated cements	442
18.4	Applications of alkali-activated or geopolymer cements	444
18.5	Precursors for alkali-activated or geopolymer cements	447
18.6	The development of alkali-activated or geopolymer cements based on construction and demolition waste	451
18.7	Conclusions	467
18.8	References	467
Part IV Environmental issues affecting recycled aggregates from construction and demolition waste		477
19	Removing gypsum from construction and demolition waste (C&DW) H. ASAKURA, Nagasaki University, Japan	479
19.1	Introduction	479
19.2	Definition and utilization of gypsum	480

19.3	The problem of contamination of construction and demolition waste (C&DW) by gypsum	483
19.4	Current methods of removing gypsum from C&DW	488
19.5	Minimum contamination levels for various uses of recovered aggregate	495
19.6	Current research and future needs	497
19.7	References	497
20	Recycling asbestos-containing material (ACM) from construction and demolition waste (CDW) A. F. GUALTIERI, Università di Modena e Reggio Emilia, Italy	500
20.1	Introduction	500
20.2	Classification of asbestos minerals, health effects and use of asbestos as a building material	502
20.3	The reclamation, disposal and recycling of asbestos-containing material (ACM)	505
20.4	Recycling cement asbestos for the production of concrete	510
20.5	Recycling cement asbestos in geopolymers	515
20.6	Future trends	518
20.7	Sources of further information and advice	519
20.8	References	520
21	Remediation processes for wood treated with organic and/or inorganic preservatives L. COUDERT, J-F. BLAIS and G. MERCIER, INRS-Eau Terre Environnement, Canada and P. COOPER and A. JANIN, University of Toronto, Canada	526
21.1	Introduction	526
21.2	Physical remediation processes for treated wood wastes	528
21.3	Bioremediation of treated wood wastes	534
21.4	Chemical remediation processes for treated wood wastes	538
21.5	Future trends	546
21.6	References	547
22	An effective approach to utilize recycled aggregates (RAs) from alkali-silica reaction (ASR) affected Portland cement concrete A. K. MUKHOPADHYAY, Texas A&M Transportation Institute, USA	555
22.1	Introduction	555
22.2	Scope of the study	557
22.3	Materials and test methods	558
22.4	Results and discussion	559
22.5	Field implications	564

xii	Contents	
22.6	Recommendations	565
22.7	Acknowledgements	566
22.8	References	566
23	Life-cycle assessment (LCA) of concrete with recycled aggregates (RAs) S. B. MARINKOVIĆ, University of Belgrade, Republic of Serbia, V. RADONJANIN, University of Novi Sad, Republic of Serbia and I. IGNJATOVIĆ, University of Belgrade, Republic of Serbia	569
23.1	Introduction	569
23.2	Properties of concrete with recycled concrete aggregates (RCA)	571
23.3	Life-cycle assessment (LCA) of concrete: allocation issues	572
23.4	A case study: LCA of recycled aggregate concrete (RAC) production compared to natural aggregate concrete (NAC) production	584
23.5	LCA of low-grade applications of RCA	592
23.6	LCA of waste management systems	597
23.7	Conclusions and future trends	600
23.8	Acknowledgement	601
23.9	References	602
24	Assessing the potential environmental hazards of concrete made using recycled aggregates (RAs) L. TIRUTA-BARNA, National Institute of Applied Sciences (INSA), Toulouse, France and R. BARNA, Écoles des Mines d'Albi – Carmaux, France	605
24.1	Introduction	605
24.2	Methods for assessing the potential hazard of construction materials and wastes	606
24.3	Pollutant emissions from concrete materials	612
24.4	Recycled aggregates (RAs): properties and intrinsic potential hazards	622
24.5	Concrete materials containing RAs: properties and potential hazards	625
24.6	Conclusions	626
24.7	References	628
