## **1 Investigating plant variation and evolution** 1

### **2 From Ray to Darwin** 4

Ray and the definition of species 4

The Great Chain of Being 5

Linnaeus 6

Buffon and Lamarck 10

Darwin 11

Tests of specific difference 21

### **3 Early work on biometry** 23

Biometrics and eugenics 23

Biometrical studies of plants 24

Commonest occurring variation in an array 25

Estimates of dispersion of the data 26

Histograms, frequency diagrams and the normal distribution curve 27

Other types of distribution 28

Comparison of different arrays of data 28

Complex distributions 29

Local races 32

Correlated variation 33

Problems of biometry 35

### **4 Early work on the basis of individual variation** 37

Phenotype and genotype 38

Transplant experiments 39

Mendel's experiments 41

Pangenesis 46

Mendelian ratios in plants 47

Mendelism and continuous variation 48

Physical basis of Mendelian inheritance 51

The development of plant cytology 55

Chromosome number 56

Chromosome changes 59

Non-Mendelian inheritance 59

Patterns of variation 60

Phenotypic variation 60

The extent of phenotypic variability in plants 61

Developmental variation 62

Phenotypic plasticity 64

Some early experiments 64

Individual variation in plants 66

## **5 Post-Darwinian ideas about evolution** 67

Experimental investigation of evolution 67

The mutation theory of evolution 70

The Evolutionary Synthesis 71

Elements of the New Synthesis 71

Coda 73

## **6 DNA: towards an understanding of heredity and molecular evolution** 74

DNA: its structure and properties 74

Replication of DNA 75

Transcription and translation of genetic information 76

Mutation of DNA 78

Exchanges of DNA segments 79

Gene silencing: epigenetic modification of DNA 79

The plant cell: adaptive, neutral and junk DNA 81

DNA in the nucleus 82

Centromeres 83

Telomeres 83

B chromosomes 83

The concept of junk DNA revisited 84

DNA in plant cells: mitochondria and chloroplasts 85  
Evolutionary changes in the chloroplast structure 86  
Genetics of chloroplasts and mitochondria 86  
*Arabidopsis thaliana*: its role as a model species 86  
Studying developmental processes: the role of model plants 88  
Phylogenetic studies 89  
Common origin to life on Earth 89  
Advances in comparative genomics 90  
Palaeopolyploidy and chromosomal changes 92  
Duplicated genes 92  
Techniques for studying genetic variation 93  
Selecting marker systems to test hypotheses 95  
Concluding remarks 96

## 7 Breeding systems 98

A. The different breeding systems found in flowering plants 98  
Outbreeding 98  
Molecular studies of self-incompatibility systems 102  
Homomorphic and heteromorphic incompatibility systems 103  
Late-acting self-incompatibility systems 104  
Self-fertilisation 105  
Apomixis 106  
Agamospermy 107  
Apomictic phenomena 108  
Embryology of apomixis 109  
Apomictic behaviour 111  
Diplospory 111  
Apospory 111  
The role of pollen in the evolution of apomictic plants 112  
Genetics of apomixis 113  
Molecular nature and origin of apomixis 113  
Some dogmas about seed apomixis 114  
B. Breeding behaviour discovered in studies of wild populations 114  
Consequences of different reproductive modes 114  
Advantages and disadvantages of different breeding systems 116

Reproductive assurance and the genetic 'quality' of progeny 118  
Breeding systems in wild populations 119  
Outbreeding combined with vegetative reproduction 119  
Outbreeding in association with vivipary 119  
Outbreeding combined with occasional self-fertilisation 120  
Outbreeding combined with regular self-fertilisation 121  
Mixed reproduction: selfing and outcrossing in different proportions 122  
Facultative and obligatory apomixis 124  
Environmental control of facultative apomixis 125  
C. Evolution of breeding systems 126  
Some concluding remarks 132

## 8 Intraspecific variation and the ecotype concept 135

Turesson's pioneer studies and other experiments 135  
Experiments by American botanists 139  
The widespread occurrence of ecotypes 144  
Clines 144  
Factors influencing the variation pattern 147  
The refining of geneecological experiments 147  
Sampling populations 148  
Cultivation experiments 151  
The designed experiment 154  
The interpretation of experiments 159

## 9 Pattern and process in plant populations 160

Variation within and between populations 161  
Selection in populations 161  
Selection in changing populations: r- and K-selection 164  
Fitness 165  
Developments in the investigation of populations 165  
Selection: the study of single factors 166  
Studies of several interacting factors: *Lotus* and *Trifolium* 166

Distribution of cyanogenic variants 168  
 The role of herbivory 168  
 Small-scale influences on patterns and process in cyanogenic species 172  
 Reciprocal transplant experiments 173  
 Experimental evidence for disruptive selection 173  
 Comparing 'young' and 'adult' generations 176  
 Co-selection in swards 177  
 The speed of microevolutionary change: agricultural experiments 177  
 Rapid change in polluted sites 178  
 Origin of metal-tolerant populations 181  
 Hyperaccumulation 182  
 Serpentine ecotypes 183  
 Sulphur dioxide tolerance 184  
 Ozone tolerance 184  
 Evolution in arable areas 185  
 Herbicide resistance 186  
 Weed evolution 188  
 Ecotypic variation in response to seasonal or irregular extreme habitat factors 188  
 Phenotypic modification and genetic differentiation 189  
 The use of model plants in the study of microevolution 190  
 Detecting the signature of selection from genomic studies 190  
 Studies of local adaptation involving cultivation experiments 191  
 Combined studies of crucial life cycle traits 192  
*Arabidopsis*: experiments on phenotypic plasticity 193  
 Adaptive and non-adaptive characters 196  
 Concluding remarks 199

## 10 Pattern and process: factors interacting with natural selection 201

Chance has profound effects 201  
 Gene flow: population variability and structure 201  
 Gene flow: early ideas 202  
 Gene flow: agricultural experiments 203  
 Gene flow: historic insights from the movement of pollen 203  
 Gene flow: historic studies of seed dispersal 205  
 'Neighbourhoods' in wild populations 206

Gene flow: studies using molecular tools 207  
 Gene flow: insights from the use of microsatellite markers 208  
 Gene flow by pollen movement 210  
 Animal-pollinated trees and shrubs 211  
 Seed/fruit dispersal 212  
 Recent insights into gene flow from the study of transgenic crop plants 212  
 Knowledge of gene flow is critical in plant conservation 214  
 Gene flow: future directions of research 215

## 11 Populations: origins and extinctions 216

Metapopulations 216  
 Founding events and bottleneck effects 217  
 Designing experiments 218  
 Case histories of founder events 218  
 Founder effects in weedy and ornamental species 219  
 Tracing the origin and spread of new populations 220  
 Identification of sources of introduced taxa 220  
 Once introduced, some species fail to establish 222  
 Development of populations: the lag phase 222  
 Changes in populations following introduction 223  
 Phenotypic plasticity and developmental adaptability 223  
 What factors contribute to the success of new populations? 226  
 Population persistence and stability: clonal growth 228  
 Size and longevity of clones: new insights using molecular markers 229  
 Implications of clonal growth in populations 229  
 Another major factor influencing population persistence: seed banks 232  
 Processes involved in the extinction of populations 233  
 Demographic stochasticity 233  
 Pollen limitation causes an Allee Effect 235  
 Effects of fragmentation 236  
 Genetics of small populations 237  
 Minimum viable populations 239  
 Concluding comments 240

## 12 Species and speciation: concepts and models 242

- The morphological species concept 242
- Species definitions: taking into account pattern and process 243
- The Evolutionary Species Concept 243
- Phylogenetic (cladistic) species concept 243
- Ecological species concept 243
- The Biological Species Concept 243
- Origins of species 245
- Gradual (Geographic) Speciation 246
- Abrupt speciation 246
- Polyploidy 246

## 13 Allopatric speciation and hybridisation 250

- Evidence for gradual speciation 251
- Crossing experiment with species of *Layia* 252
- The interpretation of crossing experiments 252
- Studies of *Layia* using molecular methods 254
- Phylogenetic studies of the Californian Tarweeds 255
- Speciation genes 255
- Pre-pollination mechanisms 256
- Post-pollination barriers 256
- Cytoplasmic male sterility: its possible role in speciation in plants 257
- Genomic changes involved in speciation 258
- Future prospects for the study of speciation genes and genomic architecture 258
- Allopatric speciation and the taxonomist 259
- Natural hybridisation 260
- Natural hybridisation in the wild: classic studies 260
- The consequences of hybridisation: some theoretical considerations 264
- Empirical studies of reinforcement 266
- The emergence of the concept of introgressive hybridisation 270
- Introgression: classic approaches championed by Anderson 271
- Genetic investigations of hybridisation 274
- Chemotaxonomy: historic investigations of hybridisation 275
- Critical tests of the hypothesis of introgression 276
- Studies of introgression using molecular tools 276

- Introgression in Louisiana Irises 278
- Asymmetric introgression 279
- Cytoplasmic capture 282
- Chloroplast capture: another route 283
- Transgressive hybridisation 283
- Can it be confirmed that adaptive traits are transferred from one species to another by introgression? 283
- Speciation: where future advances might come 284
- The role of hitchhiking in speciation 284
- Next generation sequencing technologies 285
- Zones of introgression: are they ephemeral or long-standing? 285
- Introgression: a key concept in microevolution 285
- Taxonomic considerations 286
- Introgression: its role in evolution 286

## 14 Abrupt speciation 287

- A. The emergence and testing of key concepts in the study of polyploidy 287
  - The concept of polyploidy: early cytogenetic studies 287
  - Resynthesis of wild polyploids 288
  - The concepts of auto- and allopolyploidy 289
  - The concept of genome analysis 291
  - Genome analysis: uncertainties about ancestry 292
  - Genetic control of chromosome pairing: the implications for genome analysis 294
  - Studies of karyotypes 295
  - Chemical studies 296
  - In situ* hybridisation (ISH) 297
  - Polytopic multiple origin of polyploids 297
- B. Recent insights into polyploidy from molecular studies 302
  - Key questions about polyploidy and its significance 302
  - How many species are polyploid? 302
  - The delimitation of taxa within polyploid groups 302
  - Chromosome counts provide insights into the incidence of polyploidy 303
  - Historic estimates of the incidence of polyploidy 303
  - Evidence from fossil plants 304
  - Genetic evidence 304

Polyploidy in other plant groups	305
The origin of new polyploids: the role of somatic events and unreduced gametes	305
Unreduced gametes: major insights from the studies of molecular genetics	306
Relative frequency of auto- and allopolyploidy	307
Unreduced gametes: is polyploidy important in plant evolution?	307
Polyploids: their potential for evolutionary change	307
Meiosis in polyploids	308
Evidence for structural changes in polyploids	309
Gene silencing: epigenetic alterations in gene expression	310
Transposable elements	311
Polyploids: the implications of their recurrent formation	311
Polyploids: cytogenetic changes in the longer term	311
Becoming established: what 'hurdles' do polyploids face?	312
Characteristics of polyploids as a group	313
Polyploids: ecological considerations	313
Polyploidy is often associated with a change in the breeding system	313
Evidence for hybridisation between diploid and polyploid plants in the wild	316
Reticulate patterns of variation in some groups	318
Are polyploids more frequent in particular geographical areas?	318
Current views on the present-day distribution of polyploids	321
The implications of ancient polyploidy for studies of geographical distributions	321
C. Other modes of abrupt speciation	322
Changes in chromosome number	322
Nested chromosome insertion	326
Plants with diffuse centromeres	326
Speciation following hybridisation: homoploid speciation	327
Minority disadvantage	328
Concluding remarks	329

<b>15 The species concept</b>	331
Species as part of natural classifications	331
Mental reality of species	332
Do species have evolutionary reality?	333
The Biological Species Concept	333
The views of botanical taxonomists	334
Different definitions of species	335
<b>16 Flowering plant evolution: advances, challenges and prospects</b>	336
The devising of phylogenetic trees	336
Classifications	336
Weighting characters	338
Numerical taxonomy	340
The influence of numerical taxonomy	341
Cladistics	342
Molecular phylogenetic analysis	344
Generation and analysis of molecular sequence data	346
Cladograms	346
The findings of molecular systematics	349
Layout of trees	350
Angiosperm phylogeny	351
Mapping additional information onto phylogenetic trees	353
Insights into evolutionary relationships provided by molecular phylogenetic studies	355
Timescales and timetrees: the role of fossils and molecular clocks	359
Universal or local clocks?	359
Origin and age of the Angiosperms	360
Floral evolution	362
Molecular genetics of floral evolution	363
The metaphor of the Tree of Life: its strengths and weaknesses	366
How far do phylogenetic trees reveal the course of evolution?	366
Plant evolution: limitations of the Tree of Life metaphor	370
Angiosperm evolution: what role for saltational change?	371
Constraints in evolution	375
Genome sequencing: prospects for further insights into phylogeny	375

Classification and the Tree of Life 376  
Traditional taxonomy, cladism and molecular systematics 378

- 17 Historical biogeography 382**  
The Deluge and Noah's Ark 382  
The Deluge and plant distribution 382  
Eighteenth- and nineteenth-century investigations of plant geography 383  
Long-range dispersal: early investigations 383  
Land bridges: historic ideas 384  
Continental drift 384  
Pangaea and the geographical origin of the angiosperms 385  
Ancient extinctions 386  
The K-T extinction 387  
The Pleistocene 391  
Advances in plate tectonics on the interpretation of plant distributions 392  
Modern phylogeographical investigations of plant distributions 393  
Factors considered in modelling 394  
Long-range dispersal: new insights 395  
Single and recurrent long-range dispersal 396  
Evidence for back colonisation 397  
From which source(s) did long-distance migrants originate? 397  
Disjunctions: long-distance dispersal or vicariance? 398  
The investigation of 'divergence times' for taxa 399  
Mediterranean island endemics: dating and ancestral area reconstruction 400  
Phylogenetic studies of the opening of a land bridge 400  
Migration: implications of specialisation 400  
Quaternary Ice Ages: plant survival, migration and extinction 401  
Refugia in different parts of the world 404  
Implications of refuges 404  
Migration from refuges 405  
The refugial hypothesis of Amazonian speciation 407  
Palaeoecology: insights from the study of ancient DNA 407

Multidisciplinary approaches in biogeography: two case histories 408  
Concluding remarks 409

- 18 The evolutionary impact of human activities 411**  
Humans: as animals practising extreme niche construction 411  
Human impact on the environment 411  
The evolutionary effects of human activities 412  
Assessing human impacts on ecosystems: sources of evidence 412  
From natural ecosystems to cultural landscapes 413  
The extent of human-modified ecosystems 414  
Plants: their different roles on the cultural landscape stage 416  
Interactions between plants 418  
Do human activities present threats to biodiversity? 419  
Human influences: habitat loss and fragmentation 419  
Human influences: introduced organisms 420  
The ecological consequences of introduced species 422  
Human influences: the effects of pollution 422  
Eutrophication 423  
Acid Rain 423  
Human influences: global climate change 424  
The Greenhouse Effect 424  
Direct observation of climate change 425  
Predictions of future climate change 425  
Climate change: human influences 426  
Climate change sceptics and deniers 426  
Biological effects of climate change: species adapt, move or die 427  
Climate change presents new selection pressures 427  
The footprint of climate change 428  
Forecasting future changes in distribution 430  
Adaptive responses to climate change 431  
Ecosystem changes under climate change 432  
How many species are threatened with extinction? 434  
Assessment of extinction risk by experts using IUCN and other categories 435

Endangered species: an overview	437	Manipulating and creating populations in an attempt to prevent extinction	460
Concluding remarks	438	Restocking (augmentation, reinforcement) of existing population(s)	460
<b>19 The taxonomic challenge ahead</b>	<b>439</b>	Restorations using clonal plants from various sources	461
What are the prospects of the completion of a catalogue of life?	439	Re-establishment (reinstatement) of an extinct population	461
The renewal of taxonomy	440	Founding population(s) in new areas	462
Barcoding: its history and potential in taxonomic investigations	442	Mix or match: inbreeding and outbreeding depression	462
Barcoding: a route to the reinvigoration of taxonomy?	445	Founding new populations: seed v. plants	463
The status of taxonomy in an era dominated by molecular biology	446	Restoration projects: issues and prospects	463
Will Earth's species all be named before they become extinct?	447	Species restoration projects: what counts as success?	463
<b>20 Conservation: from protection to restoration and beyond</b>	<b>449</b>	Recommendations for better restorations	463
<i>Ex situ</i> conservation	449	Aims and objectives of conservation: looking back and considering the future	465
Seed banks	452	Assisted migration	466
<i>Ex situ</i> conservation: the future	453	Major dilemmas with past-orientated conservation models	469
The role of protected areas in countering the threat of extinction	454	Setting priorities in conservation	470
Managing reserves to prevent extinction of species	457	Creative conservation: economic and political considerations	471
Restoration ecology	458	Concluding remarks	472
Creative conservation: community translocations	459	<i>Glossary</i>	478
Creative conservation: wildflower mixtures	459	<i>References</i>	482
Plants/seed of native provenance	459	<i>Index</i>	569
