

<b>1</b>	<b>Essentials</b>	<b>1</b>
1.1	Introduction	1
1.2	The Lorentz field	2
1.3	Clausius–Mossotti	5
1.4	Debye’s dipole theory*	7
1.5	Maxwell–Garnett	9
1.6	Bruggeman	12
1.7	Green’s functions formulation	19
1.8	Summary and equivalence	24
<b>2</b>	<b>Rigorous Results</b>	<b>27</b>
2.1	Introduction	27
2.2	The canonical complementary variational theorems*	28
2.3	Variational bounds	32
2.4	The concentric shell model	37
2.5	Spectral representation	41
2.6	Exactly soluble models	46
2.7	Reciprocity theorems	53
<b>3</b>	<b>Dynamical Theory</b>	<b>56</b>
3.1	Introduction	56
3.2	Review	56
3.3	Macroscopic electrodynamics	58
3.4	The quasi-static regime	63
3.5	Displacement current and wave scattering	67
3.6	Mie scattering	71
3.7	Dynamical effective medium theory	74
3.8	Open problems	79
<b>4</b>	<b>Limitations and Beyond</b>	<b>82</b>
4.1	Introduction	82
4.2	Higher-order terms	83
4.3	Percolation and criticality	84
4.4	Mie resonances	87
4.5	Multiple scattering	90
4.6	Competing interactions	97
4.7	Two-body effective medium	99
4.8	Non-equilibrium	102

<b>5 Related Theories</b>	106
5.1 Introduction	106
5.2 Coherent potential approximation	108
5.3 Feynman diagrams	115
5.4 Localization of light	119
5.5 Classical theory of liquids	122
5.6 Density functional theories	134
5.7 The Hubbard model, CPA and DFT	141
5.8 Summary	147
<b>6 EMT of Electrolytes*</b>	148
6.1 Introduction	148
6.2 Electrolyte conductivity	156
6.3 Modern Association theory	162
6.4 Summary	168
<b>7 EMT of Cloaking and Shielding*</b>	169
7.1 Introduction	169
7.2 Transformation Optics	172
7.3 EMT methods of cloaking	177
7.4 Summary	179
<b>8 EMT Applications</b>	180
8.1 Introduction	180
8.2 Electric and magnetic properties	181
8.3 Optical properties	184
8.4 Granular high- $T_c$ superconductors	187
8.5 Hydrodynamics of suspensions	192
8.6 Mechanical properties	198
8.7 Non-linear composites	206
8.8 Conclusions	208
<b>Appendix A</b>	211
<b>Appendix B</b>	213
<b>Appendix C</b>	217
