|---|-------|
| <b>Foreword</b>   | xiii  |
| <i>Nicholas B. Davies</i>   |       |
| <b>Preface</b>  | xv    |
| <b>Acknowledgements</b>   | xvii  |
| <b>List of Contributors</b>   | xviii |
| <br>  |       |
| <b>Part I Mechanisms</b>  |       |
| <br>  |       |
| <b>1. Understanding behavioural responses and their consequences</b>          | 3     |
| <i>Andrés López-Sepulcre and Hanna Kokko</i>                                  |       |
| 1.1 Introduction  | 3     |
| 1.2 What causes changes in the average behavioural phenotype of populations?  | 4     |
| 1.2.1 Covariance between trait and fitness: viability and fertility selection | 6     |
| 1.2.2 Between and within individual variation                                 | 7     |
| 1.3 When does behaviour change adaptively?                                    | 8     |
| 1.4 Demography as a cause and consequence of behavioural adaptation           | 10    |
| 1.4.1 Does adaptation always enhance persistence? No                          | 11    |
| 1.5 Conclusions: beyond changes in the population mean of a behaviour         | 12    |
| <br>  |       |
| <b>2. Environmental disturbance and animal communication</b>                  | 16    |
| <i>Gil G. Rosenthal and Devi Stuart-Fox</i>                                   |       |
| 2.1 Introduction  | 16    |
| 2.2 Signal production   | 18    |
| 2.2.1 Acoustic signals  | 18    |
| 2.2.2 Visual signals  | 19    |
| 2.2.3 Chemical signals  | 19    |
| 2.2.4 Signals acquired from the human environment                             | 20    |
| 2.2.5 Matching signals to altered habitats                                    | 20    |
| 2.3 Signal transmission   | 21    |
| 2.3.1 Acoustic signals  | 21    |
| 2.3.2 Visual signals  | 22    |
| 2.3.3 Chemical signals  | 24    |
| 2.4 Signal detection  | 25    |
| 2.5 Population-level and evolutionary effects on signals                      | 26    |
| 2.6 Conclusions   | 27    |

|  |    |
|--|----|
| <b>3. The endocrine system: can homeostasis be maintained in a changing world?</b> | 32 |
| <i>Katherine L. Buchanan and Jesko Partecke</i>                                    |    |
| 3.1 Introduction   | 32 |
| 3.2 The endocrine system   | 32 |
| 3.3 Environmental disruption of the endocrine response                             | 33 |
| 3.4 Photoperiodism and climate change  | 35 |
| 3.5 Urbanization and its ecological effects  | 36 |
| 3.6 What do we know about the effects of urbanization on hormonal responses?       | 36 |
| 3.7 Chemical pollution and endocrine disruption                                    | 37 |
| 3.8 Conclusions  | 41 |
| <br>   |    |
| <b>4. Experience and learning in changing environments</b>                         | 46 |
| <i>Culum Brown</i>   |    |
| 4.1 Introduction   | 46 |
| 4.2 Learning and its role in the development of behaviour                          | 46 |
| 4.3 Social learning  | 48 |
| 4.4 Interaction between innate and learnt responses                                | 49 |
| 4.5 Costs associated with learning   | 50 |
| 4.6 Learning and evolution   | 51 |
| 4.7 Learned responses to human induced environmental variation                     | 52 |
| 4.7.1 Learned responses to urbanization  | 54 |
| 4.7.2 Learned responses to climate change  | 55 |
| 4.8 Conclusions  | 57 |
| <br>   |    |
| <b>Part II Responses</b>   |    |
| <br>   |    |
| <b>5. Dispersal</b>  | 63 |
| <i>Alexis S. Chaine and Jean Clobert</i>   |    |
| 5.1 Introduction   | 63 |
| 5.2 Dispersal: a balance of costs and benefits                                     | 64 |
| 5.3 Dispersal is a plastic behaviour   | 65 |
| 5.4 Acquisition of information   | 67 |
| 5.5 Dispersal in a changing landscape  | 69 |
| 5.5.1 Habitat quality  | 69 |
| 5.5.2 Habitat fragmentation  | 71 |
| 5.5.3 Dispersal as a mechanism for invasion and range shifts                       | 74 |
| 5.5.4 Ecological traps   | 74 |
| 5.6 Conclusions  | 75 |
| <br>   |    |
| <b>6. Migration</b>  | 80 |
| <i>Phillip Gienapp</i>   |    |
| 6.1 What is migration?   | 80 |
| 6.2 Environmental change and migration   | 81 |
| 6.3 Migration time and fitness   | 82 |
| 6.3.1 Migration time and fitness in birds  | 82 |
| 6.3.2 Migration time and fitness in salmon   | 83 |

|           |   |     |
|-----------|---|-----|
| 6.4       | Effects of climate change on migration time   | 84  |
| 6.4.1     | Birds   | 84  |
| 6.4.2     | Salmon  | 86  |
| 6.5       | Climate change and migration—consequences for populations                           | 87  |
| 6.6       | Conclusions   | 89  |
| <b>7.</b> | <b>Foraging</b>   | 93  |
|           | <i>Ronald C. Ydenberg and Herbert H.T. Prins</i>                                    |     |
| 7.1       | Introduction  | 93  |
| 7.2       | Effects of changes in food on foraging behaviour                                    | 94  |
| 7.3       | Effects of changes in predation danger on foraging behaviour                        | 97  |
| 7.4       | Consequences for populations  | 99  |
| 7.5       | Consequences for communities and biodiversity                                       | 101 |
| 7.6       | Behaviour as a diagnosis tool   | 102 |
| 7.7       | Conclusion  | 103 |
| <b>8.</b> | <b>Reproductive behaviour</b>   | 106 |
|           | <i>Anders Pape Møller</i>   |     |
| 8.1       | Introduction  | 106 |
| 8.2       | Domestication and its effects on reproductive behaviour                             | 107 |
| 8.2.1     | Domestication and reproductive behaviour  | 107 |
| 8.2.2     | Domestication and changes in mate choice and mating behaviour                       | 109 |
| 8.2.3     | Domestication and changes in parental effort and parental care                      | 109 |
| 8.3       | Urbanization and its effects on reproductive behaviour                              | 109 |
| 8.3.1     | Urbanization and reproductive behaviour   | 109 |
| 8.3.2     | Changes in fear responses due to urbanization                                       | 110 |
| 8.3.3     | Urbanization and changes in timing and duration of reproductive seasons             | 111 |
| 8.3.4     | Urbanization and changes in life history strategies                                 | 111 |
| 8.4       | Global change and its effects on reproductive behaviour                             | 112 |
| 8.4.1     | Global change and behaviour   | 112 |
| 8.4.2     | Changes in singing behaviour in response to climate change                          | 112 |
| 8.4.3     | Changes in intensity of sexual selection and climate                                | 113 |
| 8.4.4     | Changes in infanticidal behaviour and climate change                                | 114 |
| 8.4.5     | Changes in human harvesting and composition of animal populations                   | 115 |
| 8.5       | Synthesis   | 115 |
| 8.6       | Future prospects for research   | 115 |
| <b>9.</b> | <b>Social behaviour</b>   | 119 |
|           | <i>Daniel T. Blumstein</i>  |     |
| 9.1       | Introduction  | 119 |
| 9.2       | What environmental factors might influence sociality and how do humans impact them? | 120 |
| 9.3       | Adaptive social behaviour has demographic consequences                              | 122 |

|  |            |
|--|------------|
| 9.4 Individual based models link environmental drivers with demographic outcomes         | 124        |
| 9.5 Possible consequences in the Anthropocene  | 125        |
| 9.6 Prospectus   | 126        |
| <b>10. Species interactions</b>  | <b>129</b> |
| <i>Shelley E.R. Hoover and Jason M. Tylianakis</i>                                       |            |
| 10.1 Introduction  | 129        |
| 10.1.1 General mechanisms of impact  | 130        |
| 10.1.2 Range shifts  | 131        |
| 10.1.3 Temporal shifts   | 131        |
| 10.1.4 Ontogenetic changes   | 132        |
| 10.1.5 Altered behaviour   | 132        |
| 10.2 Effects of GEC on different types of behavioural interactions                       | 132        |
| 10.2.1 Mutualisms  | 132        |
| 10.2.2 Competition   | 133        |
| 10.2.3 Parasitism/pathogens  | 134        |
| 10.2.4 Consumer–resource interactions (predation and herbivory)                          | 134        |
| 10.3 Consequences of network architecture for the effects of GEC on species interactions | 136        |
| 10.4 Interactive effects of multiple drivers on species interactions                     | 138        |
| 10.5 Conclusions   | 139        |
| <b>Part III Implications</b>   |            |
| <b>11. Behavioural plasticity and environmental change</b>                               | <b>145</b> |
| <i>Josh Van Buskirk</i>  |            |
| 11.1 Introduction  | 145        |
| 11.1.1 The special role of behavioural plasticity  | 146        |
| 11.1.2 Potential fitness effects of behavioural plasticity                               | 147        |
| 11.2 Assessing the fitness consequences of behavioural plasticity                        | 149        |
| 11.2.1 Optimal plasticity  | 149        |
| 11.2.2 Beneficial plasticity   | 150        |
| 11.2.3 Maladaptive plasticity  | 152        |
| 11.3 Outlook   | 154        |
| <b>12. Population consequences of individual variation in behaviour</b>                  | <b>159</b> |
| <i>Fanie Pelletier and Dany Garant</i>   |            |
| 12.1 Introduction  | 159        |
| 12.2 Should we expect a link between behaviour and population dynamics?                  | 161        |
| 12.3 Whose behaviour might be more likely to affect population dynamics?                 | 162        |
| 12.4 From the population to the individual level   | 163        |
| 12.5 From the individual to the population level   | 166        |
| 12.6 Is there potential for feedback between behaviour and population dynamics?          | 168        |
| 12.7 Concluding remarks and future directions  | 171        |

|  |     |
|--|-----|
| <b>13. Ecosystem consequences of behavioural plasticity and contemporary evolution</b>             | 175 |
| <i>Eric P. Palkovacs and Christopher M. Dalton</i>   |     |
| 13.1 Introduction  | 175 |
| 13.2 Behavioural effects on ecosystems   | 176 |
| 13.2.1 Consumption   | 176 |
| 13.2.2 Nutrient cycling  | 178 |
| 13.3 Rapid behavioural trait change  | 179 |
| 13.3.1 Behavioural plasticity  | 179 |
| 13.3.2 Contemporary evolution  | 180 |
| 13.4 Reaction norms and ecosystem effects  | 183 |
| 13.5 Conclusions   | 186 |
| <br>   |     |
| <b>14. The role of behavioural variation in the invasion of new areas</b>                          | 190 |
| <i>Ben L. Phillips and Andrew V. Suarez</i>  |     |
| 14.1 Introduction  | 190 |
| 14.2 Behaviours influencing the process of spread  | 191 |
| 14.2.1 The mechanics of spread   | 191 |
| 14.2.2 Dispersal behaviour during spread   | 192 |
| 14.2.3 Behaviour and population growth during spread   | 192 |
| 14.3 The effect of behavioural variation on spread   | 193 |
| 14.3.1 Plastic responses   | 193 |
| 14.3.2 Evolved responses   | 194 |
| 14.4 Behavioural variation and the impacts of invasive species on natives                          | 195 |
| 14.5 Conclusion and future directions  | 196 |
| <br>   |     |
| <b>15. Sexual selection in changing environments: consequences for individuals and populations</b> | 201 |
| <i>Ulrika Candolin and Bob Wong</i>  |     |
| 15.1 The importance of sexual selection  | 201 |
| 15.1.1 Population-level consequences   | 202 |
| 15.2 Sexual selection and the environment  | 202 |
| 15.3 Consequences of environmental change  | 204 |
| 15.3.1 Resource allocation and trade-offs  | 204 |
| 15.3.2 Interactions among sexually selected traits   | 205 |
| 15.3.3 Honesty of behavioural displays   | 206 |
| 15.3.4 Impacts on population dynamics and selection processes                                      | 207 |
| 15.4 How can animals respond?  | 208 |
| 15.4.1 Phenotypic adjustment of behaviour  | 208 |
| 15.4.2 Genetic changes   | 210 |
| 15.4.3 Population responses  | 210 |
| 15.5 What next?  | 212 |
| 15.5.1 Taking account of the complexity of environmental change                                    | 212 |
| 15.5.2 Multiple signals and multiple sensory modalities  | 212 |
| 15.5.3 Is population rescue possible?  | 213 |

|   |     |
|---|-----|
| <b>16. Evolutionary rescue under environmental change?</b>  | 216 |
| <i>Rowan D.H. Barrett and Andrew P. Hendry</i>  |     |
| 16.1 Introduction   | 216 |
| 16.2 Key questions  | 217 |
| 16.2.1 How important is genetic (as opposed to plastic) change?   | 217 |
| 16.2.2 Will plasticity evolve?  | 219 |
| 16.2.3 Is evolution fast enough?  | 220 |
| 16.2.4 Standing genetic variation versus new mutations?   | 222 |
| 16.2.5 How many genes and of what effect?   | 223 |
| 16.3 Constraints on evolutionary responses to environmental change                                      | 225 |
| 16.3.1 Limited genetic variation  | 225 |
| 16.3.2 Trait correlations   | 226 |
| 16.3.3 Ultimate constraints   | 227 |
| 16.4 Conclusions  | 228 |
| <br>  |     |
| <b>17. Ecotourism, wildlife management, and behavioural biologists: changing minds for conservation</b> | 234 |
| <i>Richard Buchholz and Edward M. Hanlon</i>  |     |
| 17.1 Introduction   | 234 |
| 17.2 Anthropogenic behavioural disturbance of wildlife  | 235 |
| 17.3 Is behavioural change bad?   | 236 |
| 17.4 What is conservation behaviour and how can it help?  | 237 |
| 17.5 Recent literature in recreational disturbance of wildlife  | 238 |
| 17.5.1 Conservation behaviour and the wildlife disturbance literature                                   | 239 |
| 17.5.2 Methodological problems in the wildlife disturbance literature                                   | 239 |
| 17.5.3 Wildlife disturbance science and conserving biodiversity   | 244 |
| 17.6 Conclusions  | 245 |
| <br>  |     |
| <b>Index</b>  | 251 |
