Preface				V	
1	Sim	ple bonding schemes		1	
	1.1	Introduction		1	
	1.2	Lewis structures of atoms		2	
	1.3	Lewis covalent bonds		2	
	1.4	Ionic structures		11	
	1.5	Metallic structures		13	
	1.6	Summary		16	
	1.7	Exercises and problems		16	
2	Ato	mic structure		17	
	2.1	Introduction		17	
	2.2	Historical aspects of atomic structure		17	
	2.3	The Bohr model of the atom		19	
	2.4	From orbits to orbitals		26	
A Nato	2.5	Building-up principle for many-electron atoms		39	
in th	2.6	Electronic structure and the periodic table		43	
a sulo	2.7	Summary		46	
	2.8	Exercises and problems		47	
3	Diat	tomic molecules		48	
a street	3.1	Introduction		48	
in the	3.2	Overlap of 1s orbitals and the simplest diatomic molecule: H_2^+	101	48	
:	3.3	Energy level diagrams of H_2 and related diatomic compounds		54	
	3.4	Bonding in <i>p</i> -block homodiatomic molecules		56	
	3.5	More on bonding in <i>p</i> -block homodiatomic molecules		61	
	3.6	Bond lengths, orders, and strengths		69	
	3.7	Heterodiatomic molecules		70	
3	3.8	Summary		74	
:	3.9	Exercises and problems		75	
4 1	Mol	ecular geometry: VSEPR		76	
4	4.1	Introduction		76	
2	4.2	The VSEPR model		76	
4	4.3	Molecules containing single bonds only		79

4.5 VSEPR and more than six electron pairs 89 4.6 d-Block metal systems 90 4.7 Summary 90 4.8 Exercises and problems 91 5 Hybrid orbital description of bonding 92 5.1 Introduction 92 5.2 Hybrid orbital description of bonding 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: tetrahedral systems 99 5.6 Hybridization: tetrahedral systems 99 5.6 Hybridization: tetrahedral systems 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6.1 Introduction 104 6.2 Triatomic molecules EX ₂ 104 6.3 Tetraatomic molecules EX ₃ 111 6.4 Exercises and problems 116 6.5 Summary 116 6.4 Exercises and problems 116 6.5 Summary 116 6.6 Exercises an		11	Molecules containing multiple hands			06
4.5 Victication intervention pairs 99 4.6 <i>d</i> -Block metal systems 90 4.7 Summary 90 4.8 Exercises and problems 91 5 Hybrid orbital description of bonding 92 5.1 Introduction 92 5.2 Hybrid orbital description of bonding 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX ₂ 104 6.3 Tetraatomic molecules EX ₃ 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.5 Exercises and problems 116 7 Glossary 118		4.5	VSEPR and more than six electron pairs			00
4.7 Summary 90 4.8 Exercises and problems 91 5 Hybrid orbital description of bonding 92 5.1 Introduction 92 5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX ₃ 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 117 Glossary 118 117 Index 120 120		4.6	d-Block metal systems			07
4.8 Exercises and problems 91 5 Hybrid orbital description of bonding 92 5.1 Introduction 92 5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of d-orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 118 Index 120 118 Index 120 120		47	Summary			90
5 Hybrid orbital description of bonding 92 5.1 Introduction 92 5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 118 Index 120 118		4.8	Exercises and problems			90
5 Hybria description of bonding 92 5.1 Introduction 92 5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 118 Index 120 120	-	Live	rid orbital description of banding			21
5.1 Introduction 92 5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120	2	пус	brid orbital description of bonding			92
5.2 Hydrogen 92 5.3 Hybridization: linear systems 93 5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of d-orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120		5.1	Introduction semedos gnibnod			92
5.3 Hybridization: trigonal systems 93 5.4 Hybridization: tetrahedral systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of d-orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 118 Glossary 118 117 Index 120 118		5.2	Hydrogen noububo			92
5.4 Hybridization: trigonal systems 96 5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of d-orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 118 Glossary 118 120		5.3	Hybridization: linear systems			93
5.5 Hybridization: tetrahedral systems 99 5.6 Hybridization: use of d-orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120		5.4	Hybridization: trigonal systems			96
5.6 Hybridization: use of <i>d</i> -orbitals 100 5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 117 Glossary 118 117 Index 120 118		5.5	Hybridization: tetrahedral systems			99
5.7 Benzene 102 5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120		5.6	Hybridization: use of <i>d</i> -orbitals			100
5.8 Summary 103 5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120		5.7	Benzene			102
5.9 Exercises and problems 103 6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 7 Glossary 118 Index 120 118 110 110 110 7 118 117 118 117 118 119 110 110 111 110 110 111 117 118 111 110 110 111 110 110 1120 111 111 113 111 111 114 110 111 115 111 111 116 111 111 117 111 111 118 <td></td> <td>5.8</td> <td>Summary amelidoto bios assist</td> <td></td> <td></td> <td>103</td>		5.8	Summary amelidoto bios assist			103
6 The molecular orbital approach and polyatomic molecules 104 6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120		5.9	Exercises and problems			103
6.1 Introduction 104 6.2 Triatomic molecules EX2 104 6.3 Tetraatomic molecules EX3 111 6.4 Five- and six-centred molecular orbitals 113 6.5 Summary 116 6.6 Exercises and problems 116 Reading list 117 Glossary 118 Index 120	6	The	molecular orbital approach and polyatomic mo	olecu	ules	104
