Part I (by Bernd Gärtner)

1	Introduction: MAXCUT Via Semidefinite Programming . . .	3
1.1	The MAXCUT Problem	3
1.2	Approximation Algorithms	4
1.3	A Randomized 0.5-Approximation Algorithm for MAXCUT . .	6
1.4	The Goemans–Williamson Algorithm	7
2	Semidefinite Programming	15
2.1	From Linear to Semidefinite Programming	15
2.2	Positive Semidefinite Matrices	16
2.3	Cholesky Factorization	17
2.4	Semidefinite Programs	18
2.5	Non-standard Form	20
2.6	The Complexity of Solving Semidefinite Programs	20
3	Shannon Capacity and Lovász Theta	27
3.1	The Similarity-Free Dictionary Problem	27
3.2	The Shannon Capacity	29
3.3	The Theta Function	31
3.4	The Lovász Bound	32
3.5	The 5-Cycle	35
3.6	Two Semidefinite Programs for the Theta Function	36
3.7	The Sandwich Theorem and Perfect Graphs	39
4	Duality and Cone Programming	45
4.1	Introduction	45
4.2	Closed Convex Cones	47
4.3	Dual Cones	49
4.4	A Separation Theorem for Closed Convex Cones	51
4.5	The Farkas Lemma, Cone Version	52

4.6	Cone Programs	57
4.7	Duality of Cone Programming	62
4.8	The Largest Eigenvalue	68
5	Approximately Solving Semidefinite Programs	75
5.1	Optimizing Over the Spectahedron	76
5.2	The Case of Bounded Trace	78
5.3	The Semidefinite Feasibility Problem	80
5.4	Convex Optimization Over the Spectahedron	82
5.5	The Frank–Wolfe Algorithm	84
5.6	Back to the Semidefinite Feasibility Problem	89
5.7	From the Linearized Problem to the Largest Eigenvalue	90
5.8	The Power Method	92
6	An Interior-Point Algorithm for Semidefinite Programming	99
6.1	The Idea of the Central Path	100
6.2	Uniqueness of Solution	101
6.3	Necessary Conditions for Optimality	102
6.4	Sufficient Conditions for Optimality	106
6.5	Following the Central Path	109
7	Copositive Programming	119
7.1	The Copositive Cone and Its Dual	119
7.2	A Copositive Program for the Independence Number of a Graph	122
7.3	Local Minimality Is coNP-hard	127
Part II (by Jiří Matoušek)		
8	Lower Bounds for the Goemans–Williamson MAXCUT Algorithm	133
8.1	Can One Get a Better Approximation Ratio?	133
8.2	Approximation Ratio and Integrality Gap	135
8.3	The Integrality Gap Matches the Goemans–Williamson Ratio	136
8.4	The Approximation Ratio Is At Most α_{GW}	149
8.5	The Unique Games Conjecture for Us Laymen, Part I	152
9	Coloring 3-Chromatic Graphs	157
9.1	The 3-Coloring Challenge	157
9.2	From a Vector Coloring to a Proper Coloring	158
9.3	Properties of the Normal Distribution	159
9.4	The KMS Rounding Algorithm	161
9.5	Difficult Graphs	163

10	Maximizing a Quadratic Form on a Graph	167
10.1	Four Problems	167
10.2	Quadratic Forms on Graphs	169
10.3	The Rounding Algorithm	172
10.4	Estimating the Error	173
10.5	The Relation to $\vartheta(\overline{G})$	176
11	Colorings with Low Discrepancy	179
11.1	Discrepancy of Set Systems	179
11.2	Vector Discrepancy and Bansal's Random Walk Algorithm ..	182
11.3	Coordinate Walks	185
11.4	Set Walks	187
12	Constraint Satisfaction Problems, and Relaxing Them Semidefinitely	193
12.1	Introduction	193
12.2	Constraint Satisfaction Problems	194
12.3	Semidefinite Relaxations of 2-CSP's	198
12.4	Beyond Binary Boolean: MAX-3-SAT & Co.	205
13	Rounding Via Miniatures	211
13.1	An Ultimate Rounding Method?	211
13.2	Miniatures for MAXCUT	212
13.3	Rounding the Canonical Relaxation of MAX-3-SAT and Other Boolean CSP	219
	Summary	229
	References	239
