

Table of Contents

1: Introduction

1

- About this book » 1*
- Why use Python's advanced features? » 1*
- How to use this book » 2*
- Exercises and solutions » 5*
- A note on setting up your environment » 6*
- Joined-up programming » 7*
- Getting in touch » 8*

2: Recursion and trees

9

- Recursively generating kmers » 9*
- Processing tree-like data » 16*
- Recap » 28*
- Exercise » 30*
- Solution » 31*

3: Complex data structures

36

- Tuples » 36*
- Sets » 38*
- Lists of lists » 40*
- Lists of dicts and lists of tuples » 42*
- Other complex structures » 45*
- Recap » 55*
- Exercises » 57*
- Solutions » 58*

4: Object-oriented Python

64

- Introduction » 64*
- A simple DNA sequence class » 66*
- Constructors » 70*
- Inheritance » 76*
- Overriding » 85*
- Calling methods in the superclass » 87*

Polymorphism » 89

Recap » 90

Exercise » 92

Solution » 93

5: Functional Python

109

Introduction » 109

State and mutability » 109

Side effects » 110

Functions as objects » 113

What is to be calculated » 116

Built-in higher order functions » 117

map » 117

filter » 122

sorted » 124

reduce » 129

Writing higher-order functions » 131

Recap » 137

Exercises » 138

Solutions » 141

6: Iterators, comprehensions & generators

157

Defining lists » 157

Lists and iterables » 158

List comprehensions » 159

Dictionary comprehensions » 163

Set comprehensions » 165

Iterators and generators » 165

Recap » 171

Exercises » 172

Solutions » 173

7: Exception handling

180

Catching exceptions » 181

Catching specific errors » 183

else blocks in exception handling » 188

finally blocks in exception handling » 189

Nested try/except blocks » 193

Exceptions bubble up » 194

Raising exceptions » 197

Custom exception types » 200

Recap » 202

Exercises » 204

Solutions » 208
