

Content

Chapter 1	Information Sources	1
Chapter 2	Structure and composition	3
Chapter 3	Motion – Transport – Development – Evolution	13
Chapter 4	Mechanics – Elasticity	21
Chapter 5	Mechanics – Inelasticity	31
Chapter 6	Mechanics - Contact Properties	41
Chapter 7	Mechanical Waves and Dynamics	51
Chapter 8	Heat and Energy	61
Chapter 9	Electricity	71
Chapter 10	Electromagnetic Waves	81
Chapter 11	Storing of Agromaterials	91

Learning to solve problems is a very complicated process that needs long-time training. A big part of this book is connected with training of problem-solving in the sphere of Agromaterials. I hope that readers enjoy the challenge of learning Agromaterials and this guide will offer some assistance toward their goal.

At the end of this "Introduction" or rather "Preface" I would like to thank to Dr. Stavros Yanniotis (Agricultural University of Athens, Greece) for his help in preparing of this book, reading the text and help in the final formulations of the problems. Some parts of this book were prepared with support of the Research Intention MSM 004-070902 (Czech Republic).
