Chapter 1 External Contact Forces

1

1.1 Forces and Couples 3

1.1.1 Generalized Contact Force and Its Rectangular Components	3
1.1.1.1 Orthogonal Components of a Force	4
1.1.1.2 Orthogonal Components of a Moment of Force	7
1.1.1.2.1 <i>Moment of Force About a Point</i>	7
1.1.1.2.2 <i>Moment of Force About an Axis</i>	13
1.1.2 Couples	18
1.1.3 Transformation of Forces and Couples	21
1.1.4 Replacement of a Given Force by a Force and a Couple	22
1.1.5 Replacement of a Given Force and Couple	
by Another Force and Couple: Invariants in Statics	24
1.1.6 Equivalent Force-Couple Systems: Varignon's Theorem	25
1.1.7 Wrenches	29
1.1.8 Wrenches and Helical Axes	32
1.1.9 Interaction With the Support	37
1.1.9.1 Basic Mechanics of Force Platforms	38
1.1.9.2 Wrench Representation of the Ground Reaction Force	43
1.1.9.3 Center of Pressure and Contact Pressure	46
1.1.9.4 Gross Mechanical Effects of the Ground Reaction	
Force: Interplay of the Internal and External Forces	48
1.1.9.4.1 <i>Linear Acceleration</i>	52
1.1.9.4.2 <i>Angular Acceleration</i>	59
1.1.9.4.3 <i>Impact Effects in Landing</i>	63
1.1.10 Forces in Grasping	65
1.1.10.1 Two-Point Contacts	70
1.1.10.2 Plücker's Coordinates	71
1.1.10.3 Wrenches in Plücker's Coordinates	72
1.1.10.4 Multifinger Contacts: Grip Matrices	75

1.2 Friction Forces and Air Resistance 75

1.2.1 Friction Angle and Friction Cone	76
1.2.2 Friction Forces in Human Movement	81
1.2.2.1 Walking and Running	81
1.2.2.2 Winter Sports: Skating, Skiing, Bobsledding	86

1.2.3 Air Resistance	88
1.3 Local Biological Effects of Contact Forces	90
1.3.1 Compression Forces	90
1.3.2 Shear Forces and Skin Friction	94
1.3.2.1 Shear Forces in Sitting	94
1.3.2.2 Skin Rubbing	96
1.3.2.3 Friction Forces in Grasping	99
1.4 Summary	102
1.5 Questions for Review	104
1.6 Bibliography	105
Chapter 2	
Statics of Multilink Serial Chains: Transformation Analysis	117
2.1 Torque and Force Actuators at Revolute Joints	120
2.1.1 Joint Torques at Joints Served by One-Joint Muscles	121
2.1.2 Joint Torques at Joints Served by Two-Joint Muscles	123
2.2 Transformation Analysis	126
2.2.1 Link Isolation	127
2.2.1.1 Method	127
2.2.1.2 Equilibrating Torques in a Planar Two-Link Chain	133
2.2.2 A General Relationship Between End Force and Joint Moments: The Jacobian Method	135
2.2.3 Relationships Between End Force and Joint Torque for Planar Kinematic Chains	137
2.2.3.1 Two-Link Chain	137
2.2.3.2 Three-Link Chain	139
2.3 Control of External Contact Forces	143
2.3.1 Two-Link Chains	145
2.3.2 Three-Link Chains	153
2.3.3 Force Ellipsoids	161
2.3.4 Chains With Holonomic Constraints	167
2.3.5 Preferred Directions for the Exertion of Endpoint Forces	172
2.3.6 Exertion of Maximal Force: Limiting Joints	175
2.3.7 On the Direct Problem of Statics: Motor Redundancy and Motor Overdeterminacy	178
2.4 Duality of Statics and Kinematics: Null Spaces	182
2.5 Summary	189
2.6 Questions for Review	191

2.7 Bibliography 193

Chapter 3

Statics of Multilink Chains: Stability of Equilibrium 199

3.1 Stiffness of Passive and Active Objects 206

3.2 Apparent Endpoint Stiffness 210

- 3.2.1 Matrices of Endpoint Stiffness 210
- 3.2.2 Vector Field Representation 213
- 3.2.3 The Stiffness Ellipse and the Principal Transformation of the Endpoint Stiffness Matrix 216
- 3.2.4 Potential Functions of Kinematic Chains 219

3.3 Apparent Joint Stiffness 222

3.4 Transformation Analysis 223

- 3.4.1 Apparent Endpoint Stiffness Versus Joint Stiffness 223
- 3.4.2 Muscle Jacobian: Apparent Joint Stiffness Versus Muscle Stiffness 225
- 3.4.3 Factors Influencing Apparent Endpoint Stiffness 228
- 3.4.4 Apparent Stiffness of the Human Arm During Posture Maintenance 231

3.5 Why Is It So Difficult to Determine Joint Stiffness? 234

- 3.5.1 Mechanical Factors 234
- 3.5.2 Physiological Factors 237

3.6 Stiffness in Motor Control Models 237

- 3.6.1 Mechanical Models and Mechanical Analogies 238
- 3.6.2 The Equilibrium-Point Hypothesis 241
 - 3.6.2.1 Control of Muscle Length and Force 242
 - 3.6.2.2 Control of Joint Angle and Torque 244
 - 3.6.2.3 Virtual Trajectories and Their Reconstruction 245
 - 3.6.2.4 Rambling-Trembling Hypothesis 247

3.7 Summary 251

3.8 Questions for Review 253

3.9 Bibliography 254

Chapter 4

Inertial Properties of the Human Body 265

4.1 Basic Mechanics Theory 266

- 4.1.1 Center of Mass 267
- 4.1.2 Moment of Inertia and Radius of Gyration 269
- 4.1.3 Products of Inertia 275

4.1.4	Moments of Inertia With Respect to Parallel and Rotated Axes	276
4.1.4.1	Parallel Axis Theorem	277
4.1.4.2	Moment of Inertia About a Rotated Axis	279
4.1.5	Tensor of Inertia and Principal Moments of Inertia	280
4.1.6	Tensors of Inertia With Respect to Remote Axes	286
4.2	Inertial Properties of the Entire Human Body	287
4.2.1	Total Center of Mass	287
4.2.2	Moments of Inertia	287
4.2.2.1	Moments of Inertia in a Standing Posture	288
4.2.2.2	Moments of Inertia in Arbitrary Postures	291
4.3	Inertial Properties of Body Parts	294
4.3.1	Segmentation	294
4.3.2	Principal Mechanical Axes Versus Principal Anatomic Axes	298
4.3.3	Some Representative Data	301
4.3.4	Factors Influencing Inertial Properties of Human Body Segments	302
4.3.4.1	Body Density	303
4.3.4.2	Total Body Mass	308
4.3.5	Inertial Properties of the Trunk	313
4.4	Subject-Specific Inertial Characteristics	316
4.4.1	Geometric Modeling	318
4.4.2	Geometric Scaling: Isometry and Allometry	321
4.4.3	Regression Equations	323
4.4.4	Combined Methods (Nonlinear Regression Equations)	324
4.5	Control of Body Inertia in Human Movement	327
4.5.1	Moments and Products of Inertia	328
4.5.2	Inertia Matrix of the Chain	328
4.5.3	Endpoint Inertia	332
4.5.4	Apparent Mass During Impacts and Striking	336
4.6	Summary	345
4.7	Questions for Review	347
4.8	Bibliography	349
Chapter 5		
Joint Torques and Forces: The Inverse Problem of Dynamics		365
5.1	Basic Dynamic Equations	368
5.2	Inverse Dynamics of Simple Planar Chains	371

5.2.1	Single-Link Motion	371
5.2.2	Planar Two-Link Chain	374
5.2.2.1	Forces During Motion of a Two-Link Chain	375
5.2.2.2	Dynamic Equations in the Closed Form	377
5.2.2.3	Dynamic Coefficients and Interactive Effects	381
5.2.3	Three-Link Planar Chains	385
5.3	Movement in Three Dimensions	388
5.3.1	Motion of a Rigid Body in Three Dimensions	389
5.3.1.1	Time Derivative of a Vector With Respect to a Rotating Frame	390
5.3.1.2	Motion of a Rigid Body About the Center of Mass	391
5.3.2	Recursive Newton-Euler Formulation	394
5.3.2.1	The Newton-Euler Equations	394
5.3.2.2	The Recursive Procedure	395
5.3.2.3	External Contact Forces	398
5.3.3	Lagrangian Formulation	402
5.3.3.1	Kinetic Energy of Individual Links	405
5.3.3.2	Kinetic Energy of the Entire Body	406
5.3.3.3	Deriving the Lagrangian Equations	407
5.3.3.4	Lagrangian Equations for a Two-Link Planar Chain	408
5.4	Joint Torques and Joint Forces in Human Motion	410
5.4.1	Interpreting Joint Torques	410
5.4.1.1	Joint Torques and Joint Motion	410
5.4.1.2	Passive Mechanical Resistance at Joints	415
5.4.1.3	Scaling Joint Torques With Movement Speed	415
5.4.2	Interpreting Joint Forces	415
5.4.2.1	Origin of Joint Forces	417
5.4.2.2	Joint Forces and Bone-on-Bone Forces	421
5.4.2.3	Effects of Joint Forces: Whiplike Movement	424
5.4.3	Interactive Torques and Forces	425
5.4.3.1	Partitioning the Joint Torques	428
5.4.3.2	Contribution of Interactive Torques and Forces	430
5.5	Summary	433
5.6	Questions for Review	435
5.7	Bibliography	436
Chapter 6		
Mechanical Work and Energy in Human Movement 455		
6.1	The Concept of Work	461
6.1.1	Work of a Force	462
6.1.1.1	Workless Forces	462

6.1.1.2	Invariance of Work	464
6.1.1.3	The Law of Conservation of Energy and Conservative Systems	465
6.1.1.4	Energy Exchange During Positive and Negative Work of a Force	466
6.1.2	Work Done on a Body	469
6.2	Work at a Joint and Work on a Body Segment	472
6.2.1	From Muscle Power to Joint Power	472
6.2.2	The Work at a Joint	474
6.2.2.1	Joint Power and Joint Work	474
6.2.2.2	Energy Transfer Between Adjacent Segments	477
6.2.2.3	Energy Transfer Between Nonadjacent Segments	481
6.2.2.4	Work of a Joint Force	483
6.2.3	Power and Work on a Body Segment	487
6.2.3.1	Computation of Power and Work	487
6.2.3.2	Conservation of Energy in One-Link Motion: Pendulum-Like Motion	492
6.2.3.3	Negative Change in the Body's Mechanical Energy Versus the Negative Work of Joint Torques	496
6.3	Energy, Work, and Power in Multilink Kinematic Chains	499
6.3.1	Work Done on the System: Energy Balance Equations	500
6.3.2	Work and Power of Sources of Mechanical Energy	504
6.3.2.1	Introductory Examples	504
6.3.2.2	Mechanical Energy Expenditure	507
6.3.2.3	Energy Compensation	508
6.3.2.3.1	<i>Intercompensation of Sources</i>	509
6.3.2.3.2	<i>Compensation During Time (Recuperation)</i>	510
6.3.3	Main Models	513
6.3.3.1	Energy Expenditure of Joint Torques (Source Approach)	513
6.3.3.2	Energy Expenditure to Move Body Links (Fraction Approach)	516
6.3.3.3	The CoM Model	518
6.3.3.3.1	<i>Energy of the CoM</i>	522
6.3.3.3.2	<i>Work of the Effective Force</i>	527
6.3.3.3.3	<i>Rate of Energy of the CoM and Rate of Total Energy of the Body</i>	530
6.3.3.4	A General Overview of the Models	533
6.4	Minimizing the Energy Expenditure for Motion	535
6.4.1	Energy Expended for Motion	536
6.4.1.1	Worklike Measures and Movement Economy	536
6.4.1.2	Work of Muscle Forces	538
6.4.2	Energy-Saving Mechanisms	540

6.4.3 Does the Central Nervous System
Minimize the Energy Expenditure for Motion? 542

6.5 Summary 542

6.6 Questions for Review 546

6.7 Bibliography 547

Appendix 1 Inertial Properties of Cadavers 575

Appendix 2 Inertial Properties Measured in Living Subjects 583

Appendix 3 Geometric Modeling of Human Body Segments 613

Glossary 617

Index 641

About the Author 653
