Preface	13
1 Introduction. The Importance, Purpose and Requirements of Contemporary Analytical Chemistry	
Prof. Ing. Jaroslav Churáček, DrSc., <i>Institute of Chemical Technology, Pardubice.</i>	14
References	20
2 Contemporary Trends in Analytical Chemistry	
Prof. Ing. Jaroslav Janák, DrSc., <i>Corresponding Member of the Czechoslovak Academy of Sciences, Institute of Analytical Chemistry, Czechoslovak Academy of Sciences, Brno</i>	21
2.1 Definition of Analytical Chemistry	21
2.2 Characterization of the Development of Analytical Chemistry	23
2.3 Key Problems in Method-Oriented Analytical Research	26
2.3.1 Analytical Spectrometry	26
2.3.2 Analytical Separation of Substances	29
2.3.3 Electroanalytical Chemistry	30
2.3.4 Nuclear Analytical Chemistry	31
2.3.5 Analysis in Solutions	31
2.3.6 Analytical Instrumentation and Chemometrics	32
2.4 Characterization of the Aims and Optimal Methodology in Problem-Oriented Analytical research	32
2.4.1 Trace and Ultratrace Analysis	32
2.4.2 Analysis of High Contents	33
2.4.3 Selective Analysis of Multicomponent Mixtures	34
2.4.4 Local Analysis	34
2.4.5 Structural Analysis	34
References	35
3 Sampling and Sample Preparation for Analysis. Concentration Techniques	
Prof. Ing. Jaroslav Churáček, DrSc., <i>Institute of Chemical Technology, Pardubice.</i>	36
3.1 General Sampling Criteria	37
3.2 Some Basic Principles for Sampling of Emissions and Immissions	38
3.2.1 Aerosols	38
3.2.2 Gases and Vapours	39
3.3 Enrichment Procedures and Sample Treatment	39
3.3.1 Extraction of the Components of Gas and Liquid Samples	40
3.3.1.1 Extraction with a Gas	40
3.3.1.2 Extraction with a Solid Substance–Sorbent	43

Contents

3.3.1.3	Extraction with a Liquid	47
3.3.1.4	The Distillation Extraction Technique	47
3.3.1.5	The Trapping Technique	49
3.3.2	Concentration of Components from Gas and Liquid Samples by Using a Chemical Reaction	50
3.3.3	Freezing-out (Cryogenic) Techniques for Atmospheric Analysis	51
	References	51
4	The Analogue Processing of Signals from Sensors Employed in Analytical Chemistry	
	Doc. Dr. Robert Kalvoda, DrSc., <i>The J. Heyrovský Institute of Physical Chemistry and Electrochemistry, Czechoslovak Academy of Sciences, Prague</i>	53
4.1	Electrical Measurement Methods	53
4.2	General Consideration of a Block Diagram of a Measurement Apparatus	54
4.2.1	The Detection Unit	54
4.2.2	The Unit for Treatment of the Signal from the Sensor	57
4.2.3	The Unit for Evaluation of the Electrical Quantity	58
4.3	Treatment of Analogue Signals	60
4.3.1	Basic Circuits for Operational Amplifiers	60
4.3.1.1	Current Followers	62
4.3.1.2	Voltage Amplifiers — Inverting Circuits	62
4.3.1.3	Voltage Amplifiers — Non-inverting Circuits	63
4.3.1.4	Differential Amplifiers	64
4.3.1.5	Summing and Comparator Circuits	64
4.3.1.6	Integrating Circuits	65
4.3.1.7	Differentiating Circuits	66
4.3.2	Examples of the Use of OAs in Chemical Instrumentation	66
4.3.2.1	Automatic Potentiometric Titrations	67
4.3.2.2	Electrolysis at a Controlled Potential — the Potentiostat	68
4.3.2.3	Polarographic Measurements	69
4.3.2.4	A Simple Model for a Two-Electrode Polarograph	70
4.3.3	Treating Voltage and Current Signals by an Analogue-to-digital Converter	71
4.4	Integrated and Intelligent Sensors	72
4.5	Trends in Development	73
	References	74
5	Modern Polarographic Methods in Chemical Analysis	
	RNDr. Miloslav Kopanica, CSc., <i>J. Heyrovský Institute of Physical Chemistry and Electrochemistry, Czechoslovak Academy of Sciences, Prague</i>	75
5.1	Development of Polarography	75
5.2	Capacity Current	75
5.2.1	Elimination of the Capacity Current	76
5.3	Pulse-Polarographic Methods	76
5.3.1	Normal-Pulse Polarography — NPP	78
5.3.2	Differential-Pulse Polarography — DPP	79
5.3.3	Modifications of Pulse Methods	83
5.3.4	Fast Differential-Pulse Polarography at a Dropping Mercury Electrode	84
5.3.5	Pulse Voltammetry	85
5.3.6	Mechanisms of Electrode Processes and Their Effect on Pulse-Polarographic Determinations	85
5.3.6.1	Preceding Reactions	85

5.3.6.2	Subsequent Reactions	86
5.3.6.3	Regenerative Mechanism	87
5.3.6.4	Adsorption Processes	88
5.4	Electrochemical Stripping Analysis	89
5.4.1	Electrodes	91
5.5	Polarographic Instrumentation	92
5.6	Analytical Applications	93
5.6.1	Determination of Inorganic Substances	93
5.6.2	Determination of Organic Substances	94
5.6.3	Polarographic and Voltammetric Detectors	95
	References	95
6	Analytical Capillary Electrophoresis	
	RNDr. Petr Boček, DrSc., <i>Institute of Analytical Chemistry, Czechoslovak Academy of Sciences, Brno</i>	97
6.1	Analytical Electrophoresis	97
6.2	Theory	98
6.2.1	Strong Electrolytes	98
6.2.2	Weak Electrolytes	102
6.2.3	The Relationship Between Mass Transfer and Electric Current	105
6.2.4	The Moving Boundary Equation	106
6.2.5	The Kohlrausch Regulation Function	108
6.2.6	The Self-Sharpening Effect, Steady-State Boundaries and Diffuse Boundaries	113
6.3	Practical Aspects of Analytical Capillary Electrophoresis	114
6.3.1	General Considerations	114
6.3.2	The Joule Heat	114
6.3.3	Electro-osmosis	116
6.3.4	Diffusion	118
6.3.5	Gravitation	118
6.3.6	Adsorption in Capillary Electrophoresis	119
6.4	Capillary Zone Electrophoresis	119
6.4.1	General Considerations	119
6.4.2	Description of the Method	120
6.4.3	Instrumentation	124
6.4.4	Qualitative and Quantitative Analysis	126
6.4.5	Applications	127
6.5	Analytical Capillary Isotachopheresis	128
6.5.1	General Considerations	128
6.5.2	Description of the Method	128
6.5.3	Instrumentation	130
6.5.4	Qualitative and Quantitative Analysis	131
6.5.5	Applications	135
	References	139
7	Contemporary Trends in the Use of Ion-Selective Electrodes in the Analysis of Organic Substances	
	Prof. Ing. Karel Vytrás, DrSc., <i>Institute of Chemical Technology, Pardubice</i>	142
7.1	Ion-Selective Electrodes	142
7.1.1	Definition of Concepts	142
7.1.2	Classification of Electrodes	143

7.1.3 Measurements with Ion-Selective Electrodes	145
7.2 Determination of Elements in Organic Substances	146
7.3 Determination of Organic Substances on the Basis of the Reactions of Their Functional Groups	148
7.3.1 Methods Based on Chelate Formation	149
7.3.2 Determination of Ionic Organic Compounds	151
7.3.3 Methods Based on Specific Reactions of Functional Groups	156
7.4 Potentiometric Biosensors	157
References	158

8 The Principles and Theory of Chromatography

Ing. Josef Novák, DrSc., <i>Institute of Analytical Chemistry, Czechoslovak Academy of Sciences, Brno</i>	165
8.1 Basic Concepts	165
8.2 Classification of Chromatographic Systems and Procedures	166
8.2.1 Aggregation States of Coexisting Phases	166
8.2.2 Physical Arrangement of the Chromatographic System and Procedures in the Chromatographic Experiment	167
8.2.3 Development of the Chromatogram	168
8.2.3.1 Frontal Chromatography	168
8.2.3.2 Elution Chromatography	169
8.2.3.3 Displacement Chromatography	169
8.2.4 The Mechanism of Distribution of Analytes Between the Phases of a System	170
8.3 Review of the History of Chromatography	171
8.4 Theoretical Models of Chromatography	171
8.5 Models of Linear Chromatography with an Incompressible Mobile Phase	173
8.5.1 Linear Non-ideal Non-equilibrium Chromatography	173
8.5.2 Linear Non-ideal Quasi-equilibrium Chromatography	178
8.5.3 Linear Ideal Chromatography	178
8.6 Simplified Description of Non-ideal Linear Chromatography	179
8.6.1 The Retention Equation	179
8.6.2 Broadening of Chromatographic Zones	181
8.6.2.1 Non-uniform Mobile Phase Flow (A)	182
8.6.2.2 Longitudinal Diffusion of the Solute in the Mobile Phase (B_M)	182
8.6.2.3 Longitudinal Diffusion of the Solute in the Stationary Phase (B_S)	183
8.6.2.4 Non-equilibrium Resulting from the Finite Rates of Adsorption and Desorption of the Solute in Chromatographic Systems with Solid Sorbent ($C_{Sa,d}$)	183
8.6.2.5 Non-equilibrium Resulting from the Finite Rate of Lateral Diffusion of the Solute in the Liquid Sorbent Film (C_{Sl})	184
8.6.2.6 Non-equilibrium Resulting from the Finite Rate of Lateral Diffusion of the Solute in the Interparticle (Flowing) Mobile Phase (C_M)	185
8.6.2.7 Non-equilibrium Resulting from the Finite Rate of Diffusion of the Solute in the Mobile (Stagnant) Phase held in the Particle Pores (C_M^*) and in the Liquid Sorbent in the Particle Pores (C_{Sl}^*) in the Chromatographic Bed	185
8.6.2.8 Combination of Dispersion Factors	186
8.6.3 The Concept of the Theoretical Plate	188
8.7 Flow of the Mobile Phase	192
8.8 Sorption Equilibrium and the Distribution Constant	193
8.8.1 Sorption Equilibrium in the Migrating Chromatographic Zone	193

8.8.2 Relationships Between the Chromatographic Distribution Coefficient and the Thermodynamic Properties of the Chromatographic System	194
8.8.3 The Effect of Temperature and Pressure on the Standard Differential Molar Gibbs Free Energy of Sorption and the Chromatographic Distribution Coefficients	198
8.9 Chromatographic Resolution	200
8.10 Development of the Theory of Chromatography	202
References	203
9 The Theory of Column Liquid Chromatography in Reversed-Phase Systems	
Prof. Ing. Pavel Jandera, DrSc., <i>Institute of Chemical Technology, Pardubice</i>	205
9.1 The General Characteristics of the Method	205
9.2 Stationary Phases and Sorbents	206
9.2.1 Stationary Phases Chemically Bonded or Immobilized on Inorganic Supports	206
9.2.2 Carbon as the Stationary Phase	211
9.2.3 Organic Polymer Stationary Phases	212
9.3 The Retention Mechanism and Theoretical Models	213
9.4 The Effect of Experimental Conditions on Retention	217
9.4.1 The Effect of Temperature	217
9.4.2 The Effect of the Composition of Binary and Multicomponent Mobile Phases	218
9.4.3 Gradient Elution	223
9.4.4 The Effect of Mobile Phase Additives on Retention	225
9.5 The Effect of the Solute Structure on Retention	226
9.5.1 Substances in Homologous and Oligomer Series	226
9.5.2 Correlation of Retention Data with the Structural Parameters of the Solute	229
9.5.3 Calibration of the Retention Scale and Selectivity	230
References	233
10 Progress in Instrumentation for Liquid Chromatography	
Prof. Ing. Pavel Jandera, DrSc., <i>Institute of Chemical Technology, Pardubice</i>	237
10.1 Individual Components of a Liquid Chromatograph	237
10.1.1 Pumps	239
10.1.2 Systems for Generating a Mobile Phase Gradient	241
10.1.3 Sample Injectors	242
10.1.4 Chromatographic Columns and Packing Materials	244
10.1.5 Detectors	247
10.1.6 Data Processing Devices	255
10.2 Trends in the Development of Instrumentation for High-Performance Liquid Chromatography	256
10.2.1 Automation	256
10.2.2 Optimization of Separation Conditions	258
10.2.3 Miniaturization in Liquid Chromatography	262
10.2.4 Direct Combination of Liquid Chromatography with Other Techniques	262
References	268
11 Liquid Chromatography with Small-Bore Columns	
Ing. Miloš Krejčí, DrSc., <i>Institute of Analytical Chemistry, Czechoslovak Academy of Sciences, Brno</i>	270
11.1 The Role of Miniaturization in Liquid Chromatography	270
11.2 Classification of Small-Bore Columns	271
11.3 The Effect of the Column Diameter on the Basic Chromatographic Parameters	272

11.4 The Velocity of the Mobile Phase	274
11.5 Retention Volumes	275
11.6 Microcolumns and Capillary Columns	276
11.6.1 Microcolumns	276
11.6.2 Capillary Columns.	277
11.7 Extra-Column Spaces	280
11.8 Sample Volumes	281
11.9 Detectors	287
11.10 Trace Analysis in Microcolumn Liquid Chromatography	289
11.11 Conclusions	292
References	293

12 Advances in the Preparation of Glass and Fused-Silica Capillary Columns for Gas Chromatography

Doc. Ing. Karel Komárek, CSc., <i>Institute of Chemical Technology, Pardubice</i>	294
12.1 Introduction	294
12.2 Column Hardware	294
12.3 Drawing of Capillaries	298
12.4 Properties of the Inner Surface	299
12.5 Modification of the Inner Surface	300
12.5.1 Roughening	305
12.5.2 Leaching	305
12.5.3 Deactivation	306
12.5.3.1 Silylation	306
12.6 Capillary Coatings	309
12.7 Columns with Immobilized Stationary Phases	310
12.7.1 Immobilization Initiated by Organic Peroxides and Azocompounds	311
12.7.1.1 Factors Affecting Immobilization	314
12.7.2 Immobilization Initiated by γ -Radiation.	316
12.7.3 Other Immobilization Methods	317
12.8 Conclusions	319
References	319

13 Field-Flow Fractionation

Ing. Josef Janča, DrSc., <i>Université Pierre et Marie Curie, Laboratoire de Physico-Chimie Macromoléculaire (URA-CNRS), Ecole Supérieure de Physique et de Chimie Industrielles, 10, rue Vauquelin, 75231 Paris, France</i>	325
13.1 Classification of the Methods and Techniques of FFF	325
13.2 Principles of Classical and Focusing FFF	326
13.3 Theoretical Basis of FFF	328
13.3.1 Retention in Classical FFF Methods	328
13.3.2 Retention in Focusing FFF Methods	330
13.3.3 Dispersion in Classical FFF Methods	333
13.3.4 Dispersion in Focusing FFF Methods	334
13.4 The Scope of FFF	336
13.5 FFF Methods	337
13.5.1 Classical FFF Methods	337
13.5.2 Techniques of Focusing FFF	342
13.6 FFF Instrumentation	344
13.7 FFF Methodology	345

13.8	Practical Application of FFF Methods	347
13.9	Accuracy, Precision, Repeatability, Reproducibility	348
13.10	Comparison of FFF and Related Methods	348
13.11	Future Developments in FFF.	349

16 Chemometrics in the Instrumental Laboratory	
Doc. RNDr. Milan Meloun, DrSc., <i>Institute of Chemical Technology, Pardubice</i>	406
16.1 Measurement Errors and the Law of Error Propagation	407
16.2 Measures of Position and Spread	410
16.2.1 Point Estimates of the Position Parameters	411
16.2.2 Point Estimates of Variability	412
16.2.3 Point Estimates of Skewness and Kurtosis	414
16.2.4 Interval Estimates of Position and Variability	414
16.3 Statistical Hypothesis Testing	417
16.4 ANOVA, Analysis of Variance	421
16.4.1 One-Way ANOVA	421
16.4.2 Two-Way ANOVA	424
16.5 Regression Analysis of Calibration Graphs	426
16.5.1 Linear Calibration Models	427
16.5.2 Non-linear Calibration Models	429
16.5.3 Goodness-of-Fit Test of the Calibration Graph	430
16.6 Regression Analysis of Non-linear Models	432
16.6.1 Estimation of the Parameters of the Non-linear Model	433
16.6.2 Classification of Minimization Methods	434
16.6.3 Error Analysis	439
16.6.4 Reliability of Model Building and Testing	439
16.7 Factor Analysis	442
16.8 Interpolation	445
16.8.1 Linear Interpolation	445
16.8.2 Lagrange Interpolation	446
16.8.3 Newton Interpolation	446
16.8.4 Gaussian Interpolation	446
16.9 Differentiation and Integration	447
16.9.1 Differentiation	447
16.9.2 Integration	449
16.10 Chemical Model Building by Regression Analysis of Instrumental Data	450
References	464
17 Some Important Considerations in the Selection of an Analytical Method and Optimization of Analytical Procedures	
Prof. Ing. Jaroslav Churáček, DrSc., <i>Institute of Chemical Technology, Pardubice</i>	466
17.1 The Selection of an Analytical Method	466
17.1.1 Optimization Criteria	468
17.2 Optimization of Analytical Methods – General Considerations	472
17.2.1 Optimization of Analytical Methods – An Example	472
